Understanding Physiotherapy Research by Littlewood and May is an introductory level text that aims to be accessible and understandable to all physiotherapists who appreciate the need to integrate research evidence into their practice. The requirement for physiotherapists to engage with evidence-based practice has never been more apparent and the benefits of such an approach are clear. Evidence derived from research is a cornerstone of evidence-based practice, but before such evidence can be incorporated into an evidence-based paradigm, it should be appraised and its trustworthiness and applicability considered. This means that evidence-based physiotherapy practitioners need to be aware of the inherent strengths and limitations of research studies and what these mean for their practice. However, this is not always a straightforward process and it is not uncommon for both novice and experienced physiotherapists to become lost in the language of research. To facilitate the evolution of evidence-based physiotherapy practice, this book aims to bridge the gap by presenting a clinically focused range of methodological discussions in relation to specific research study designs in physiotherapy. The intention of the book is to offer a platform upon which readers can develop their understanding of meaningful critical appraisal and consequently gain confidence when reading published research.

This new innovative resource aims to give physiotherapy students and those new to respiratory care a simple, easy-to-use guide to the process and procedures used in the assessment of adult respiratory patients. Cardiorespiratory Assessment of the Adult Patient begins by identifying the scope of respiratory physiotherapy and listing some key aims of assessment with an overview of different approaches. It then goes on to provide a selection of 'assessment checklists' for the main clinical settings which the physiotherapist is likely to encounter. Chapter 3 provides a selection of 'assessment tools' given alphabetically, including those that physiotherapists may be expected to carry out themselves and those where they only need to interpret the assessment findings. These tools include a systematic guide to the procedure involved (where relevant) and an explanation of the key findings and their significance for the physiotherapist. In the final section, individuals can apply their knowledge using case scenarios and suggested solutions are also provided. Part of the Physiotherapist's Toolbox Series – unlock your key skills! Perfect for use on placement and in the clinic. Assessment checklists for main clinical settings – ideal for aide memoires Assessment tools listed alphabetically Tools include clear step-by-step guidance for relevant procedures Key points boxes help to prioritize and identify what to focus on in each setting Spiral-binding allows for easy, lie-flat reference Pull-out bookmark of normal values and common abbreviations for easy reference
