Multiplication Word Problems Teacher Created Resources
Singapore Math creates a deep understanding of each key math concept, includes an introduction explaining the Singapore Math method, is a direct complement to the current textbooks used in Singapore, and includes step-by-step solutions in the answer key. Singapore Math, for students in grades 2 to 5, provides math practice while developing analytical and problem-solving skills. This series is correlated to Singapore Math textbooks and creates a deep understanding of each key math concept. Learning objectives are provided to identify what students should know

after completing each unit, and assessments are included to ensure that learners obtain a thorough understanding of mathematical concepts. Perfect as a supplement to classroom work, these workbooks will boost confidence in problem-solving and critical-thinking skills!

Word Problem Grade 5 Daily Math Puzzlers Level B (and Webinar) for 3rd, 4th, 5th, Homeschool Grade 100 Word Problems Grade 5 Math

Research Question: How does collaborating daily to solve math word problems on number theory and fractions using scaffolded strategies to support reading comprehension and math concept development influence performance on word problems?

Subquestions: Does the protocol for problem analysis help solve or apply to all word problems? How successful are the English

Learners (ELs) compared to the English Only (EOs) students in this study in applying the protocol and in showing growth?

Research Activities: Context: This study took place in a 5th grade classroom with 26 students (13 English learners) in a highly diverse large school district. This study focuses on six students across English learning levels, performance in mathematics (with two at each the low, medium and high level of mathematics).

Methods and Data: This intervention occurred over a twenty-one day period and consisted of three five-day lesson cycles in which students worked in groups of 3 to discuss and complete mathematical word problems. Each five-day lesson cycle was followed on the sixth day by a quiz and the seventh day by one-third of a chapter test. Groups and word problems were designed to allow for discussion and collaboration to find solutions and later independent success on quizzes and exams.

Results: Student attitudes of themselves as successful mathematical word problem solvers improved by 33%, as did their confidence in the ability to solve them. Student performance on word problems in mathematics quizzes and tests improved and students used more grade-level appropriate academic vocabulary when discussing mathematics. Additionally, students who were English Learners participated in group discussions, including adding their own methods for solving and giving feedback to their peers.

Conclusions: Having students work collaboratively to solve word problems can be beneficial to student problem solving abilities and/or their confidence in mathematics. It is also one way for students to share and discuss methods for problem solving, and give English Learners more opportunities for speaking practice.

Grade Level: Fifth Grade. **Data Collection Methods:** Observational

teacher notes, evaluation/feedback, attendance tallies, curriculum assessment (publisher created), focus group notes, questionnaire, student work, whole-class discussion notes, attitudinal surveys, self-assessments.

Curriculum Areas: Math.

Instructional Approaches: Assessment/evaluation, class discussion, collaboration/teaming, cooperative learning, math-word/story problems, student engagement.
