Bachelor Thesis from the year 2008 in the subject Business economics - Accounting and Taxes, grade: 1,7, University of the West of England, Bristol (Bristol Business School (University of the West of England)), course: Accounting in Context, 20 entries in the bibliography, language: English, abstract: This report explains the major changes which companies have to face with the revised IFRS 3 which was published in January 2008. One of them is the introduction of an option when it comes to the recognition of minority interest. The acquiring companies may chose between measuring it with its fair value or, as in the previous version of the standard, with its proportionate share of the net assets of the acquiree. Comparing the two treatments it becomes obvious that only the fair value measurement leads to the recognition of the part of goodwill which is attributable to the minority interest. This causes lower

returns on capital employed and higher equity ratios for firms applying the fair value treatment. Another important modification of the revised IFRS 3 is that acquisition related cost such as legal or adviser fees have to be expensed, which means a cut in profits in the year of the acquisition. Before, those costs have been capitalised with the investment. When it comes to business combinations achieved in stages the revised standard demands that any previously held investment has to be re-measured at its fair value. Any differences to the carrying amount have to be realized as gains or losses. Goodwill is subsequently measured as the excess of the consideration transferred, the value of the re-measured investment and any minority interest over the identifiable net assets of the acquiree.

Mergers and acquisitions (M&As) reshape the corporate landscape helping companies expand market share and gain a strategic advantage. The ability to understand and analyze these transactions is a crucial skill. The first step in acquiring that skill is being able to gather and analyse information on M&As from public sources, such as financial statements. This textbook helps its readers better analyze M&A transactions using information provided in financial statements. Covering accounting and reporting of consolidations, goodwill, non-controlling interests, step acquisitions, spin-offs, equity carve-outs, joint ventures, leveraged buyouts, disposal of subsidiaries, special purpose entities, and taxes, it focuses on the link between underlying economic events and the information in financial statements and how this link affects the assessment of corporate performance. The first part of the book provides description of the accounting rules governing M&A transactions, while the second part

includes cases of M&A transactions. Each case focuses on a different element of an M&A transaction, and it is followed by a detailed solution with a complete analysis. Unlike other books in this field, this textbook focuses exclusively on accounting and financial analysis for graduate and upper undergraduate level courses in financial analysis, corporate finance, and financial accounting. *Business Combinations* John Wiley & Sons Concepts, methods, and issues in calculating the fair value of intangibles *Accounting for Goodwill and Other Intangible Assets* is a guide to one of the most challenging aspects of business valuation.
