Pagination in CodeIgniter *Codeigniter User Guide*
 Pagination [Pagination](#) ¶ *CodeIgniter provides a very simple, but flexible pagination library that is simple to theme, works with the model, and capable of supporting multiple paginators on a single page. Loading the Library* ¶ *Like all services in CodeIgniter, it can be loaded via Config\Services, though you usually will not need to load it manually:* *Pagination — CodeIgniter 4.0.4 documentation*
`$this->pagination->initialize($config); echo $this->pagination->create_links();` *Notes: The \$config array contains your configuration variables. It is passed to the \$this->pagination->initialize function as shown above. Although there are some twenty items you can configure, at minimum you need the three shown.* *Pagination Class : CodeIgniter User Guide* *It is passed to the \$this->pagination->initialize() method as shown above. Although there are some twenty items you can configure,*

at minimum you need the three shown. Here is a description of what those items represent: `base_url` This is the full URL to the controller class/function containing your pagination. In the example above, it is pointing to a controller called "Test" and a function called "page".

Pagination Class — CodeIgniter 3.1.11 documentation
 In order to use pagination in CodeIgniter, the first thing you need to do is to load the pagination library. And we can do it by using `$this->load->library('pagination')`. We've also loaded the URL helper so that we can use global helper functions provided by that helper.

Pagination in CodeIgniter: The Complete Guide
`$this->pagination->initialize($config);` initializes the pagination library using the config array value that we defined and assign the above values to. `$page = ($this->uri->segment(2)) ? $this->uri->segment(2) : 0;` checks if the skip number has been set in the second segment of the URI and if its not set then the value 0 is assigned to the variable `$page`.

Pagination in CodeIgniter with Step by Step Example
