As the field of public administration has been changing due to globalization, government reforms, and increasing governance practices within intergovernmental networks, research and teaching in public administration also adapted itself to these changes. Public policy research and instruction has become transformed and has diffused into other countries with the help of international organizations and other agents of change and transfer. Research in this field is seen as an opportunity for a definitive shift from traditional models of public administration in the sense that policies may be better designed, articulated, and governed through a collaborative approach, while service provision could be enhanced in terms of proximity, representativeness, and innovativeness. The Handbook of Research on Global Challenges for Improving Public Services and Government Operations provides comprehensive approaches to the study of public administration and public policy from a comparative perspective and includes sound theories and concepts for understanding opportunities and challenges governments face when seeking to improve public services and government operations. The book is a compilation of selective high-quality chapters covering cases, experiences, and practical recommendations on topics related to public administration, public policy, social policy, public management, and public affairs. This book is ideal for policymakers, students, and researchers in the field of public administration, public policy, governance, public management, public affairs, citizen engagement, and administrative sciences and management along with practitioners, stakeholders, and academicians interested in the best practices of various countries in public administration and policy.

Event Management: For Tourism, Cultural, Business and Sporting Events Oswaal Books
From the Olympics to the World Cup, mega sporting events are a source of enjoyment for tens of thousands, but can also be a source of intense debate and controversy. This insightful new Handbook addresses a number of central questions, including: How are host cities selected and under what economic conditions? How are these events organized, and how is local resistance overcome? Based on historical and empirical experience, what are the pitfalls for the organizers of these events? What are the potential economic benefits, including any international image effects? How can the costs be minimized and the benefits maximized for host cities and countries? How do these mega events impact the challenges of globalization and what is their environmental legacy? Compiled and edited by two internationally renowned sports economists, the expert contributions elaborate on the specific mechanisms of the bid processes, analyse the determining factors of winning bids, and illustrate how to construct future bid campaigns. Underpinned by case studies from four continents and by theoretical considerations, the reasons for seemingly systemic cost overruns are explored and analysed, as are the effects on national and regional employment and income, property values, non-traditional economic variables (such as psychological and marketing benefits) and urban branding and transformation. The Handbook also reflects on important elements of design of the games in order to better plan, prepare and allocate resources – including, for example, sustainability issues and the use of campaigns to secure positive perceptions. This book provides an up-to-date analysis of the financing and economic impact of mega sporting events, as well as a full discussion of how host cities can maximize the benefits from their experience. As such, it will prove a fascinating read for academics, students, researchers and policymakers with an interest in economics and public sector economics generally, and more specifically, in the economics of sport.

China's maritime "gray zone" operations represent a new challenge for the U.S. Navy and the sea services of our allies, partners, and friends in maritime East Asia. There, Beijing is waging what some Chinese sources term a "war without gunsmoke." Already winning in important areas, China could gain far more if left unchecked. One of China's greatest advantages thus far has been foreign difficulty in understanding the situation, let alone determining an effective response. With contributions from some of the world's leading subject matter experts, this volume aims to close that gap by explaining the forces and doctrines driving China's paranaul expansion, operating in the "gray zone" between war and peace. The book covers China's major maritime forces beyond core gray-hulled Navy units, with particular focus on China's second and third sea forces: the "white-hulled" Coast Guard and "blue-hulled" Maritime Militia. Increasingly, these paranaul forces, and the "gray zone" in which they typically operate, are on the frontlines of China's seaward expansion.

A Contemporary Archaeology of London's Mega Events Routledge

This edition stresses some critical reflections regarding security policies before and during Sport Events in our contemporary era of generalized insecurity. Sport competitions at the national, European and global levels have evolved in terms of economic investment, social importance and media coverage. However, this evolution has brought with it major political concerns. At the same time, the dominant question regarding the organization of competitions in our post-modern, neoliberal risk societies is the creation of a safe and secure milieu; the need of construction of an environment of life where sport events and the multiple activities and interests related to them can be kept safe from any risk and potentially harmful occurrence. In the name of security, anticipatory dispositifs and risk management practices, rationalities and technologies of government do not exclusively attempt to prevent disastrous incidents or to maintain order in situ. Involving a set of heteronymous public and private organizations and bureaucraties, state "experts" and not state "security managers", proactive security strategies seek to imagine the future, to pre-empt, to act in advance, to anticipate possible catastrophic incidents by managing populations and spaces in order to set, to assure, with any cost, the ideal conditions. The aim of this volume is to highlight the complex set of legal provisions, surveillance and policing practices, discourses, bureaucratic procedures and spatial and architectural forms underpin the security governance of sport events and their effects in the contemporary era of widespread uncertainty. This book was published as a special issue of Sport in Society.
