Introductory Financial Accounting for Business is an innovative approach that emphasizes critical

<p>thinking over the rote memorization of terms, such as “debits” and “credits”. The sequential learning model employed by the authors helps students see the bottom-line consequences of financial statements as it relates to the overall business, better preparing them for careers as accountants, entrepreneurs, and decision-makers. The authors focus initially on conceptual underpinnings</p>	<p>-- the reasons why we approach procedures the way we do – rather than confusing students by front-loading the material with over-complicated details. Author Chris Edmonds has also created a highly popular and widely used series of video lectures, which engage students by clearly and charismatically going over each learning objective in a conversational style. These videos help reinforce important</p>	<p>lessons and are always available for review. By developing this stronger foundation, students understand Accounting ideas more broadly and are able to ultimately learn procedural applications more quickly and accurately. With a straightforward writing style and highly engaging video lectures, this dynamic author team leads students down a streamlined learning path</p>

This textbook, originally by D. Annand and H. Dauderis, was intended

for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout

the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP). Intermediate Financial Accounting McGraw-Hill/Irwin The University of North Georgia Press and Affordable Learning Georgia bring you Principles of Financial

Accounting. Well-written and straightforward, Principles of Financial Accounting is a needed contribution to open source pedagogy in the business education world. Written in order to directly meet the needs of her students, this textbook developed from Dr. Christine Jonick's years of teaching and commitment to effective pedagogy. Features: Peer reviewed by academic professionals

and tested by students Over 100 charts and graphs Instructional exercises appearing both in-text and for Excel Resources for student professional development
