*Original VW Beetle*  
Springer Science &  
Business Media  
This handbook is an  
important and valuable  
source for engineers  
and researchers in the  
area of internal

combustion engines  
pollution control. It  
provides an excellent  
updated review of  
available knowledge in  
this field and furnishes  
essential and useful  
information on air  
pollution constituents,  
mechanisms of  
formation, control  
technologies, effects of

engine design, effects of operation conditions, and effects of fuel formulation and additives. The text is rich in explanatory diagrams, figures and tables, and includes a considerable number of references. An important resource for engineers and researchers in the area of internal combustion engines and pollution control Presents and excellent updated review of the available knowledge in this area Written by 23 experts Provides over 700 references and more than 500 explanatory diagrams, figures and tables

*A Guide to the Driving Test Gestalten*

An illustrated history of Northumberland County Fire Brigade from its inception in 1948 to the present

day.

*Hydrogen and Fuel Cells* Independently Published

Lavishly illustrated with full-colour digital photography, this is the inside story of the car designed to replace the iconic Porsche 911.

*The Divergent Paths of Belgium and Spain*

Elsevier

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World

War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

**La Lancia** Springer  
No automobile is more recognizable than the Volkswagen Beetle.

Introduced as an affordable motor vehicle for postwar Germany, the little Beetle grew to iconic status in both the automotive world and the world of pop culture. This year-by-year, full-color tribute to the "People's Car" begins with the first models in 1945 and goes on to cover the Beetle's 33-year production run in Germany, it's continued manufacture in Mexico starting in 1978, and the introduction in Spring 1998 of the New Beetle -- a car that reasserted the model's popularity, posted remarkable sales and, like its forebear, transcended the automotive world to become a pop culture sensation. *Explore Australia by Caravan and*

The rapid takeoff of the  
 continent-sized  
 national economies  
 and the increasing  
 expense of extraction  
 have led to strong  
 tensions in petrol  
 prices and a race  
 towards alternative  
 driving systems. This  
 book analyses the  
 emergence of a second

automobile revolution  
 through the  
 trajectories of  
 automobile firms since  
 the nineties.

This book chronicles  
 the divergent growth  
 trends in car  
 production in Belgium

and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto

industry investment for all EU nations.

### **Restructuring of the Czech Automobile Industry** Simon and Schuster

Modern economies depend on innovation in services for their future growth. Service innovation increasingly depends on information technology and digitization of information processes. Designing new services is a complex matter, since collaboration with other companies and organizations is necessary. Service innovation is directly related to business models that support these services, i.e. services can only be successful in the long run with a viable business model that creates value for its customers and providers. This book

presents a theoretically grounded yet practical approach to designing viable business models for electronic services, including mobile ones, i.e. the STOF model and – based on it – the STOF method. The STOF model provides a ‘holistic’ view on business models with four interrelated perspectives, i.e., Service, Technology, Organization and Finance. It elaborates on critical design issues that ultimately shape the business model and drive its viability.

High speed catamaran

and multihull high speed marine vessel have become very popular in the last two decades. The catamaran has become the vessel of choice for the majority of high speed ferry operators worldwide. There have been significant advances in structural materials, and structural design has been combined with higher power density and fuel efficient engines to deliver ferries of increasing size. The multihull has proven itself to be a suitable configuration for active power projection across oceans as well as for coastal patrol and protection, operating at high speed for insertion or retrieval with a low energy capability. At present there is no easily

accessible material covering the combination of hydrodynamics, aerodynamics, and design issues including structures, powering and propulsion for these vehicles. Coverage in *High Speed Catamarans and Multihulls* includes an introduction to the history, evolution, and development of catamarans, followed by a theoretical calculation of wave resistance in shallow and deep water, as well as the drag components of the multihull. A discussion of vessel concept design describing design characteristics, empirical regression for determination of principal dimensions in preliminary design, general arrangement, and methods is also

included. The book concludes with a discussion of experimental future vehicles currently in development including the small waterplane twin hull vessels, wave piercing catamarans, planing catamarans, tunnel planing catamarans and other multihull vessels.

*Pollutant Formation and Control* Springer

This is a brilliant examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as

a whole. Specifically, the book examines the development and post-1990 restructuring of the Czech car, components, and truck industries. Springer Science & Business Media Now in its sixth edition, *Explore Australia by Caravan and Motorhome* has everything you need to know about caravan and motorhome trips in Australia, whether it's the dream lap or just excellent weekends away. This ever-popular caravanning bible has been completely revised and updated, with details on the routes to take, the best things to see and the most stunning places to park your caravan, wherever you want to travel in Australia. To make it

even easier to find the best place to stay, each section now contains a list of the greatest caravan parks specially curated by the author. Every listing contains handy symbols that have all the important information, such as whether the park is dog-friendly or has a dump point available. There are also symbols to make it easy to see at a glance if a park is a member of a major caravan organisation (BIG4, Top Tourist Parks, Family Parks and Kui Parks). There's also a detailed guide to preparing yourself, and your caravan or motorhome, for time on the road with tips on packing, safety, towing and how to find the best camps and the cheapest fuel. 75 Years of Ford in

Australia Academic Press

This report identifies policy options and makes recommendations on market-oriented actions to promote the purchase of the most environmentally friendly vehicles.

Motor Business Europe

Marquis Who's Who Steering one of the world's largest carmakers into the future, one man is taking an artistic and audacious approach to mobility. This is his story.

*The Development of Armoured Forces, Their Tactics and Operational Potential*  
Springer

This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations

of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of

automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

*Handbook of Air Pollution from Internal Combustion Engines*  
Arms & Armour

The best years of the automobile lie before us. But it will be a new kind of car and a new kind of automotive experience. There will be a new powertrain dominating the motoring world. Driving will gradually be ceded to the on-board electronics, and, in response, interiors will

become more luxurious and sociable. The car will connect with other cars, and infrastructure, a community and ecology of mobility. Brave New Car outlines the possibilities, and opportunities, that lie before us. A premium quality book for the professional, student, and enthusiast alike, Brave New Car is sure to challenge and inspire new thinking in the automotive world and beyond.
