Ständige Ablenkung ist heute das Hindernis Nummer eins für ein effizienteres Arbeiten. Sei es aufgrund lauter Großraumbüros, vieler paralleler Kommunikationskanäle, dauerhaftem Online-Sein oder der Schwierigkeit zu entscheiden, was davon nun unsere Aufmerksamkeit am meisten benötigt. Sich ganz auf eine Sache konzentrieren zu können wird damit zu einer raren, aber wertvollen und entscheidenden Fähigkeit im Arbeitsalltag. Cal Newport prägte hierfür den Begriff »Deep Work«, der einen Zustand völlig konzentrierter und fokussierter Arbeit beschreibt, und begann die Regeln und Denkweisen zu erforschen, die solch fokussiertes Arbeiten fördern. Mit seiner Deep-Work-Methode verrät Newport, wie man sich systematisch darauf trainiert, zu fokussieren, und wie wir unser Arbeitsleben nach den Regeln der Deep-Work-Methode neu organisieren können. Wer in unserer schnelllebigen und sprunghaften Zeit nicht untergehen will, für den ist dieses Konzept unerlässlich. Kurz gesagt: Die Entscheidung für Deep Work ist eine der besten, die man in einer Welt voller Ablenkungen treffen kann.

One of the keys to acquiring a new language is to learn the patterns that make up the language. Simply learning phrases so you can speak "pidgin" Cherokee is not learning Cherokee. You need to learn the fundamentals of the language on how words are put together to be able to understand and communicate in the language. There are many degrees of meaning that different word parts provide and if you don't learn these shades of meaning up front and how they are expressed you will never progress beyond simple memorized phrases and never obtain satisfaction with the language. While each person's skill will differ, one should strive to gain enough understanding of the mechanics of language to be able to comprehend and communicate effectively. The goal of this material is to provide you a solid structural foundation on how Cherokee works. You will learn how words are put together in basic sentences and how to form new words for ideas not listed in the dictionary.

Authors Shannon Hengen and Ashley Thomson have assembled a reference guide that covers all of the works written by the acclaimed Canadian author Margaret Atwood since 1988, including her novels *Cat's Eye*, *The Robber Bride*, *Alias Grace*, and the 2000 Booker Prize winner, *The Blind Assassin*. Rather than just including Atwood's books, this guide includes all of Atwood's works, including articles, short stories, letters, and individual poetry. Adaptations of Atwood's works are also included, as are some of her more public quotations. Secondary entries (i.e. interviews, scholarly resources, and reviews) are first sorted by type, and then arranged alphabetically by author, to allow greater ease of navigation. The individual chapters are organized chronologically, with each subdivided into seven categories: Atwood's Works, Adaptations, Quotations, Interviews, Scholarly Resources, Reviews of Atwood's Works, and Reviews of Adaptations of Atwood's Works. The book also includes a chapter entitled 'Atwood on the Web,' as well as extensive author and subject indexes. This new bibliography significantly enhances access to Atwood material, a feature that will be welcomed by university, public, and school librarians. Margaret Atwood: A Reference Guide 1988-2005 will appeal not only to Atwood scholars, but to students and fans of one of Canada's greatest writers.

During the last decade the field of electronic design automation has changed from a small industry offering a random sampling of commercial and academic design automation tools, to a significant industry comprising offerings ranging from individual tools to total design systems, all based upon a set of emerging standards. Workers in electronic design automation are active in the development of integrated design environments and therefore in the development of frameworks. Frameworks for electronic design automation are rather similar to those for mechanical or software engineering, however the class of tools may differ resulting in differing specific requirements for the services to be offered. The present book documents the results of the 2nd Workshop on electronic design automation frameworks. The question of standardization is of special interest within the book, especially as related to VHDL, EDIF, PDES, and CFI. Also included are discussions of the role of specialized languages for specific environments, and how the user community can help standards to evolve.

The purpose of the book is to train verification engineers on the breadth of technologies available and to give them a utilitarian methodology for making effective use of those technologies. The book is easy to understand and a joy to read. Its organization follows a 'typical' verification project from inception to completion, (planning to closure). The book elucidates concepts using non-technical terms and clear entertaining explanations. Analogies to other fields are employed to keep the book light-hearted and interesting.

This book enables readers to achieve ultra-low energy digital system performance. The author's main focus is the energy consumption of microcontroller architectures in digital (sub)-systems. The book covers a broad range of topics extensively: from circuits through design strategy to system architectures. The result is a set of techniques and a context to realize minimum energy digital systems. Several prototype silicon implementations are discussed, which put the proposed techniques to the test. The achieved results demonstrate an extraordinary combination of variation-resilience, high speed performance and ultra-low energy.
