You love rice and need some inspiration to get cooking? This cook book covers the most popular rice dishes using a variety of grains and techniques along with some extra treats. When cooked correctly, rice on it's own can be delicious. Add good rice to your favourite main meal and it instantly becomes more interesting. This book is about making great, simple and tasty food with the help from a rice cooker but the recipes can be made using normal everyday tools in a kitchen such as pots and pans. We would, however, advise that to get the best from your rice and the recipes in this book, having a good rice cooker would be helpful. Some recipes can be done entirely in a rice cooker whilst other recipes explain how to make perfect dishes that are usually served with rice. Basically, if you love rice then there will be a lot here for you. We take you on a journey through a world of flavours from Indian dals to spicy, sweet and savoury Thai dishes to Chinese favourites and the sushi shores of Japan. We explore Mexican and Brazilian dishes, some European favourites, Middle Eastern delights, and everything in between. Along the way we give guidance and explain food tricks to get the most flavour from your cooking. We add information on how to pair dishes with rice, how to elevate rice to a higher level and explain how rice should be eaten! We include recipes for interesting desserts you can make in a rice cooker, yes desserts! Whilst rice cookers are very good at cooking rice, the way that they operate means that they are also good at cooking specific key dishes that are more than just rice. We show how these can give variety to your cookery skills and maximise the potential of rice cooking. Finally, we give interesting facts about rice, rice cookers, grain guides, handy tips and other useful information to help you on your journey to a healthier way to eat! Congratulations! You are now a part of our rice cooker revolution

A fresh look at Iranian popular culture and women's role within this prior to the 1979 Revolution.

Japan Electric Industry William Andrew

Selling products used to be the standard way of doing business. Traditionally, it is left to the user to transform the purchase of a product into something that fulfils effectively a final-user need. Today, two streams of research – business management and sustainability – normally with very distinct perspectives on the world, have surprisingly converged to form a common conclusion: selling products is old-fashioned business. Companies should switch their focus to selling need fulfilment, satisfaction, or experiences. Or, in other words, selling integrated solutions or product-services. The business management literature argues that, by focusing on the integrated, final-client needs, and delivering integrated solutions fulfilling these needs, companies will be able to improve their position in the value chain, enhance added value of their offering, and improve their innovation potential. In a business world where many products are becoming equally well-performing commodities, this strategy is one of the ways to avoid a sheer competition on price – a type of competition that Europe never can win with emerging and low-cost economies such as China. In that sense, product-services can mean new business for old Europe. The sustainability knowledge stream argues that need-focused solutions could be inherently more sustainable than products. Product-services could offer the value of use instead of the product itself and decrease the environmental load in two ways. First, companies offering the service would have all the incentives to make the (product-)system efficient, as they get paid by the result. Second, consumers would be encouraged to alter their behaviour as they gain insight into all the costs involved with the use. Until today, the connections and interchange between the two research streams have been quite limited. The question of whether product-services truly are the avenue to a sustainable world is still under discussion. This book aims to develop a systematic view on this issue. The potential of product-services to enhance competitiveness and contribute to sustainable development prompted the EU to invest heavily in the theme under the EU's 5th Framework Programme (FP5; 1997-2002). A variety of research and development projects in the field were supported under the umbrella of the Sustainable Product Development

Network (SusProNet). These included MEPSS (Methodology Product Service Systems); Home Services; HiCS (Highly Customerised Solutions); Prosecco (Product-Service Co-design); and Innopse (Innovation Studio and exemplary developments for Product-Service). The projects were undertaken by a mix of European research institutions and companies including Orange, Philips and Nokia. Some of these projects focused on developing methods that could help industries change their output from a product to a service. Others focused on the development of new product-services or solutions (HiCS, Prosecco, Innopse), and yet others tried to analyze under which circumstances product-services are likely to be implemented and accepted by consumers (Home Services). One project focused on dissemination of the concept to SMEs (Lean Services). Other projects focused purely on new product-service development, such as Brainfridge (an intelligent fridge managing its supply chain), ASP-NET (application service providers), Protex (intelligent enzymes) and IPSCON (receivers for wireless telephones). New Business for Old Europe brings together the key outputs from all of these groups to present a state-of-the-art collection on product-service development, prospects and implications for competitiveness and sustainability. The book has a number of aims. First, it attempts to bridge the gap between business and sustainability literature to lead to a better-founded understanding of the business drivers for embarking on product-service development, and its relation with sustainability and competitiveness. Second, the book reviews the large amount of studies that have developed toolkits, methods and approaches that can support marketers, product developers and strategists in business to develop product-services, selects the best-practice approaches and analyses any gaps. Third, the book examines what opportunities there are for product-service development in a variety of key areas including base materials, information and communication technologies, offices, food and households. Each chapter in this section discusses the area, developments that will stimulate or hinder the market opportunities for product-services, product-service examples, and typical implementation challenges for product-services in that area. These chapters serve as a quick introduction for companies interested in developing product-services in a

specific area. Fourth, the book translates all the lessons into suggested approaches for product-service development by companies. Annexes include a lightweight "product-service development manual" and an alphabetical list of useful underlying tools.

Major Information Technology Companies of the World Walter de Gruyter

In the rapid growth of the Chinese economy as the "world's factory and market", while this process has been supported by foreign companies, local Chinese companies have also emerged in the brief span of about 10 years to become major players. This is an extremely rare case in the world history and recently even among the BRICs and the NIEs. One cannot help but wonder what strategic positions foreign firms have adopted to cope with the extraordinary, fierce challenges they have had to face from local Chinese firms. A workshop discussed and illuminated the corporate activities and competitive and cooperative strategies of both Chinese and foreign firms from the perspective of Japanese, European, US and Asian firms.

This book, suitable for IS/IT courses and self study, presents a comprehensive coverage of the technical as well as business/management aspects of mobile computing and wireless communications. Instead of one narrow topic, this classroom tested book covers the major building blocks (mobile applications, mobile computing platforms, wireless networks, architectures, security, and management) of mobile computing and wireless communications. Numerous real-life case studies and examples highlight the key points. The book starts with a discussion of m-business and m-government initiatives and examines mobile computing applications such as mobile messaging, m-commerce, M-CRM, M-portals, M-SCM, mobile agents, and sensor applications. The role of wireless Internet and Mobile IP is explained and the mobile computing platforms are analyzed with a discussion of wireless middleware, wireless gateways, mobile application servers, WAP, i-mode, J2ME, BREW, Mobile Internet Toolkit, and Mobile Web Services. The wireless networks are discussed at length with a review of wireless communication principles, wireless LANs with emphasis on 802.11 LANs, Bluetooth, wireless sensor networks, UWB (Ultra Wideband), cellular networks ranging from 1G to 5G, wireless local loops, FSO (Free Space Optics), satellites communications, and deep space networks. The book concludes with a review of the architectural, security, and management/support issues and their role in building, deploying and managing wireless systems in modern settings.

This book explores the rise of consumerism and the expanding variety of goods available in Japan. Japan is placed within the comparative context of the 'consumer revolution' in Europe and North America, contributing to the analysis of the ways in which consumption and everyday life change in the course of economic development.

The Kenya Gazette is an official publication of the government of the Republic of Kenya. It contains notices of new legislation,

notices required to be published by law or policy as well as other announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week.

Financial Mail Mobile Computing and Wireless Communications

This volume merges four streams of inquiry and interpretation in a study of the evolution and emergence of Japan's leading industrial firms during the twentieth century. First, it is a historical study of how the industrial institutions of modern Japan appeared and matured. Second, it is an organization study of the basic forms of social and economic interaction in Japan. Third, it is a development study of how circumstances of rapid technical and economic change have shaped the Japanese business system. It is also a strategy study of how Japanese managers have responded to and shaped these circumstances. This fourfold synthesis offers a model of institutional development under conditions of late economic development and private initiative that falls somewhere between a capitalist development state and a free market economy. Business policy rather than industrial policy is accentuated, revealing a set of robust institutions and a dynamic to activate and interrelate them.

New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country. With award-winning writing and photography covering everything from politics and food to theater and fashion, the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself, while celebrating New York as both a place and an idea.

These monsters were also traitors that caused American soldiers to be tortured and killed. The answer to the Americas oil crises was a cover-up by the U.S. government in 1973 and is still a secret today. The oil is still untapped today. The U.S. government knows where the largest untapped oil field in the world is and kept it a secret till today. Once you start, you will not be able to put this book down. Learn the unspeakable truth. At times, this book will scare you, then make you laugh, then amaze you and also make you cry. Last entry is my trip back to Vietnam on December of 2009. I tell you about Vietnam today."

LIFE BoD – Books on Demand

This book aims to answer the key question facing China in building an innovative country: What kind of indigenous innovation path with Chinese characteristics should be taken? This book conducts an in-depth analysis of the indigenous innovation path with Chinese characteristics from two dimensions: path evolution and level (enterprise, industry, region, and country). It puts forward the leading path of innovation with Chinese characteristics and also offers policy suggestions.

Annual Report DIANE Publishing

The 1980s saw a whole wave of practical applications of fuzzy theory, mainly in the field of process control, with Japan as pioneer. In the '90s there has been a flood of applications to household electrical appliances, and “fuzzy” has become a high-tech buzz-word in Japan. Since then many countries have followed suit and developed their own fuzzy applications. This book reviews the burgeoning industrial applications of fuzzy theory. The contributors are mostly industrial engineers or research experts in the field. The areas covered include automobiles, home appliances, voice recognition, medical techniques, fuzzy design, process control, space operations and mobile autonomous robots. Very recently the development of fuzzy theory has become intertwined with fields such as neural networks and chaos. This volume also summarizes such trends in an industrial context. The book will be of use to senior undergraduates or graduate students, industrial research scientists, and anyone interested in the wide-ranging applicational aspects of fuzzy theory today. Contents: Industrial Fuzzy Control Review: A Perspective from Feedback and Manufacturing (S Isaka & V K Chu) Fuzzy Logic Control in Finnish Industry (H N Koivo) Recursive Fuzzy Reasoning and Its Application to an Auto-Tuning Controller (K Nomoto) A Practical Application of Fuzzy Theory to an Auto-Regulation System for Extra-Corporeal Circulation (ECC) (T Tobi) Automatic

The IGBT device has proved to be a highly important Power Semiconductor, providing the basis for adjustable speed motor drives (used in air conditioning and refrigeration and railway

locomotives), electronic ignition systems for gasoline-powered motor vehicles and energy-saving compact fluorescent light bulbs. Recent applications include plasma displays (flat-screen TVs) and electric power transmission systems, alternative energy systems and energy storage. This book is the first available to cover the applications of the IGBT, and provide the essential information needed by applications engineers to design new products using the device, in sectors including consumer, industrial, lighting, transportation, medical and renewable energy. The author, B. Jayant Baliga, invented the IGBT in 1980 while working for GE. His book will unlock IGBT for a new generation of engineering applications, making it essential reading for a wide audience of electrical engineers and design engineers, as well as an important publication for semiconductor specialists. Essential design information for applications engineers utilizing IGBTs in the consumer, industrial, lighting, transportation, medical and renewable energy sectors. Readers will learn the methodology for the design of IGBT chips including edge terminations, cell topologies, gate layouts, and integrated current sensors. The first book to cover applications of the IGBT, a device manufactured around the world by more than a dozen companies with sales exceeding \$5 Billion; written by the inventor of the device.

Tokyo Business Today

This book is aimed at undergraduates taking an introductory marketing course. Essentials of Marketing provides an overview of the techniques, supporting theories and tactical decision-making processes involved in marketing. As well as traditional marketing techniques, up-to-date topics such as green issues, post-modern thinking, relationship marketing and ethics are also covered. The 4th edition has been thoroughly re-written to include the new 7 C's framework. The language is concise and transparent making this book an enjoyable read for students. A new full colour layout also helps to engage the reader.
