Better Lives*  
Collins  
The routine  
jobs of

yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to

think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened

two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of

skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to

capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled

assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking  
Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity  
Intrapersonal

skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning

Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

NEW EDEXCEL INTERNATIONAL GCSE BIOLOGY P

National Academies Press Providing complete coverage of the 2009 Edexcel IGCSE human biology specification, this book helps students perform to their best in the exam.

**Oxford International AQA Examination s: International GCSE Biology**

Coordination Group Publication

This revision guide for Edexcel IGCSE Physics contains summaries and key points for all the topics in the specification.

It offers numerous revision questions to thoroughly prepare students for their examinations, and also includes revision tips and techniques.

Longman Biology Homework for Edexcel IGCSE

Pearson Education The Cambridge Lower Secondary Complete Biology Student Book builds a solid foundation in Lower Secondary

Biology through a rigorous, separate science approach and develops the skills students need to prepare them for the step up to IGCSE. This resource fully covers the curriculum and prepares students for a smooth transition to IGCSE Biology. The book provides an international approach from author, Ann Fullick, teacher and subject specialist author of nearly 200 textbooks. It

maintains the strengths of the previous, best-selling edition, but with updates and improvements to better meet students' needs. The Student Book is supported by a Workbook that provides opportunities for independent practice inside and outside the classroom, and a Teacher Handbook, which offers full teaching support.
