Nelson Mental Maths SAP Teachers @Work

Excerpt from Mental Arithmetic, Vol. 1
Mental Arithmetic is not intended to supersede written arithmetic, but should rather be its constant auxiliary. Without proper mental training, the pupil becomes accustomed to depend almost entirely on rules and formulæ - not capable of interpreting the latter, and entirely in the dark as to the reasons of the former. The long and barren reign of rule and routine is due to the fact that rational methods in teaching the Logic of the Public School have been too generally ignored - that Mental Arithmetic, which, by easy steps, leads the pupil into an intelligent possession of principles, and renders him expert and logical in their application, has hitherto held an utterly insignificant place in school-room work. Given a slate, a

pencil, a rule, and a salutary dread of coming trouble, and a pupil was supposed to be seized of all the elements necessary to make him a first-rate arithmetician. But better methods have begun to prevail; and the improvement in teaching written arithmetic which has taken place during the past few years has only to be supplemented by systematic mental training, in order to reach the highest results of the study of the same. This is recognized by the various educational authorities throughout the Dominion. Most of them have, it is believed, made it imperative that their teachers shall have a thorough training in Mental Arithmetic, and prove by actual examination, their knowledge of rational methods as well as their ability to teach them.
