Guide to U.S. Economic Policy The World Scientific Handbook Of Energy

This book sheds new light on how microbes can be used as effective and sustainable resources to produce green energy in the form of biogas, algal diesel, ethanol, hydrogen and direct electricity. It discusses topics such as microbial energy conversion technologies, including ethanol production by microbial catalytic reaction, biomethanization, biodiesel from microalgae, microbial fuel cells, and the microbiological production of hydrogen. The book will inspire scientists to find new approaches to meet local energy demands with the help of

sustainable microbial resources available in and around a given location.

Old Loyalties, New Ties Springer

In this book Steven Shavell provides an in-depth analysis and synthesis of the economic approach to the building blocks of our legal system, namely, property law, tort law, contract law, and criminal law. He also examines the litigation process as well as welfare economics and morality. Aimed at a broad audience, this book requires neither a legal background nor technical economics or mathematics to understand it. Because of its breadth, analytical clarity, and general accessibility, it is likely to serve as a definitive work in the economic analysis of law.

Legal Origins and the Efficiency Dilemma SAGE Publications

Sections include: "A theory of change approach to evaluation", "Reflections from evaluation practitioners" and "Issues in

measurement and analysis".

Sex, Family, and the Culture Wars Routledge

The Law and Economics approach to law dominates the intellectual discussion of nearly every doctrinal area of law in the United States and its influence is growing steadily throughout Europe, Asia, and South America. Numerous academics and practitioners are working in the field with a flow of uninterrupted scholarship that is unprecedented, as is its influence on the law. Academically every major law school in the United States has a Law and Economics program and the emergence of similar programs on other continents continues to accelerate. Despite its phenomenal growth, the area is also the target of an ongoing critique by lawyers, philosophers, psychologists, social scientists, even economists since the late 1970s. While the critique did not seem to impede the development of the field, it certainly has helped it to become more sophisticated, inclusive, and mature. In this volume some of the leading scholars working in the field, as well as a number of those critical of Law and Economics, discuss the foundational issues from various perspectives: philosophical, moral, epistemological, methodological, psychological, political, legal, and social. The philosophical and methodological assumptions of the economic analysis of law are criticized and defended, alternatives are proposed, old and new applications are discussed. The book is ideal for a main or supplementary textbook in courses and seminars on legal theory, philosophy of law, jurisprudence, and (of course) Law and Economics.

Using comparative law and a strong basis in both Islamic law and common law, *Towards the Reform of Private Waqfs* offers

innovative solutions for private Waqfs.

Economics and Ageing Routledge

This upper level textbook provides a coherent introduction to the economic implications of individual and population ageing. Placing economic considerations into a wider social sciences context, this is ideal reading not only for advanced undergraduate and masters students in economics, health economics and the economics of ageing, but also policy makers, students, professionals and practitioners in gerontology, sociology, health-related sciences and social care. This volume discusses the fiscal implications of ageing, health economics and long-term care. Fiscal policy issues include generational accounting and national transfer accounts, the relationship between ageing, public expenditure and fiscal policy, the age profiles of public expenditures and taxes, and the relationship between ageing, capital and labour taxation. Health economics with regard to ageing comprises healthy and disability-free life expectancy, the relationship between health inequalities and age, the macroeconomic implications of population health, the socio-economic determinants of health, the interaction between ageing and both individual and aggregate health expenditure, and economic approaches to valuing later life. This volume closes with an exposition of the economics of formal and informal care, as well as questions around insurance, risk and the so-called 'sandwich generation'.

With specially commissioned introductions from international experts, the *Psychological Insights for Understanding COVID-19* series draws together previously published chapters on key

themes in psychological science that engage with people's unprecedented experience of the pandemic. This volume collects chapters that address prominent issues and challenges presented by the SARS-CoV-2 pandemic to families, parents, and children. A new introduction from Marc H. Bornstein reviews how disasters are known to impact families, parents, and children and explores traditional and novel responsibilities of parents and their effects on child growth and development. It examines parenting at this time, detailing consequences for home life and economies that the pandemic has triggered; considers child discipline and abuse during the pandemic; and makes recommendations that will support families in terms of multilevel interventions at family, community, and national and international levels. The selected chapters elucidate key themes including children's worry, stress and parenting, positive parenting programs, barriers which constrain population-level impact of prevention programs, and the importance of culturally adapting evidence-based family intervention programs. Featuring theory and research on key topics germane to the global pandemic, the Psychological Insights for Understanding COVID-19 series offers thought-provoking reading for professionals, students, academics, policy makers, and parents concerned with the psychological consequences of COVID-19 for individuals, families, and society. *Current Catalog* Princeton University Press

Thomas Kleinlein analysiert die unterschiedlichen Potentiale für eine dialogische und pluralistische Grundrechtsjudikatur, die föderalen Grundrechtssystemen innewohnen. Gegenstand seiner Untersuchung sind Deutschland, die USA und die EU. Als Alternative zu einem verbreiteten staats- und

souveränitätszentrierten Verständnis schlägt er eine föderale Theorie der Mehrebenen-Grundrechtsjudikatur vor. Mit einer solchen föderalen Sichtweise lassen sich dogmatische Figuren, über die Anwendungsbereiche, Kontrollmassstäbe und -intensität definiert werden, als Ausdruck der institutionellen Strukturen und der Interaktion der beteiligten Gerichte begreifen. Praktischer Ertrag der Forschung sind Vorschläge, die Gerichten in Mehrebenen-Strukturen Orientierung bieten können, vor allem angesichts der aktuellen Herausforderungen, mit denen der Grundrechtsschutz in Europa konfrontiert ist.

The holistic analysis of law has its historical roots in ancient Greece and Rome. A global or holistic law overview of any issue may lead to fairness and broader justice. The first part of this book regards a holistic analysis of law as a general theory; the second part focuses on history of law and the holistic analysis; the third part focuses on procedural law and practice and the holistic analysis, namely the holistic look at counselling as a lawyer in the United States, a holistic method of a mediator studying conflict in Russia and beyond, a holistic analysis of Chinese procedural law, and the holistic analysis of evidence evaluation in international law. The fourth part includes holistic analysis of law relating to modern issues, such as artificial intelligence, climate change and climate refugees and a chapter on the economic diplomacy of Vietnam as a holistic approach model.

New Approaches to Evaluating Community Initiatives: Theory, measurement, and analysis Mohr Siebeck

How religious barriers stalled capitalism in the Middle East In the year 1000, the economy of the Middle East was at least as advanced as that of Europe. But by 1800, the region had fallen dramatically behind—in living standards, technology, and economic institutions. In short, the Middle East had failed to modernize economically as the West surged ahead. What caused this long divergence? And why does the Middle East remain drastically underdeveloped compared to the West? In *The Long Divergence*, one of the world's leading experts on Islamic economic institutions and the economy of the Middle East provides a new answer to these long-debated questions. Timur Kuran argues that what slowed the economic development of the Middle East was not colonialism or geography, still less Muslim attitudes or some incompatibility between Islam and capitalism. Rather, starting around the tenth century, Islamic legal institutions, which had benefitted the Middle Eastern economy in the early centuries of Islam, began to act as a drag on development by slowing or blocking the emergence of central features of modern economic life—including private capital accumulation, corporations, large-scale production, and impersonal exchange. By the nineteenth century, modern economic institutions began to be transplanted to the Middle East, but its economy has not caught up. And there is no quick fix today. Low trust, rampant corruption, and weak civil societies—all characteristic of the region's economies today and all legacies of its economic history—will take generations to overcome. *The Long Divergence* opens up a frank and honest debate on a crucial issue that even some of the most ardent secularists in the Muslim world have hesitated to discuss.

Extraordinary social and moral shifts have taken place in Western societies. Sex is no longer the exclusive province of husband and wife set within monogamous married family life. The world is awash in sex: advertising, books, magazines, movies, sex clubs, internet pornography, etc. Parents, traditionally responsible for guiding their children's moral and social development, have been effectively side-lined by commercial and governmental interests. This volume pursues a detailed study of how changes in social life dating from the sexual revolution of the 1960s have affected the family. Cherry shows that attempts to redefine the family away from the marital union of husband and wife come with real costs: social, emotional, psychological, and financial. He argues that while political campaigns have fuelled attempts to undermine the traditional family, to pretend it possesses no basic biological, social, or moral reality, such ideologically driven undertakings are injurious to society. Acting as if there are no consequential differences between traditional marriage and other sexual lifestyles ignores significant data demonstrating the importance of the traditional biological family to the well-being of men and women, and the successful raising of children. The family possesses a biological and moral being that is foundational; an essential building block of society. Cherry argues that the family is the most incontrovertible field of conflict in the culture wars; others might conclude that it is the decisive battleground.

The Two-Parent Privilege Routledge

Written in an accessible, case study format, this groundbreaking work explores the formulation, implementation, and evaluation of

family leave policy in the United States, from its beginnings at the state level in the early 1980s, through the adoption of the federal Family and Medical Leave Act of 1993, and beyond to the present day. With a political economy perspective, the book identifies the major economic and social forces affecting both the family and the workplace. And drawing on original primary research, it examines how the political system has responded to this evolving issue with various policy initiatives.

Family Leave Policy: The Political Economy of Work and Family in America Springer

Lucid, comprehensive, and definitive in its field, this text covers every aspect of economic analysis of the law. Features: Two new chapters, one on intellectual property, one on international and comparative law, both exploding fields of great importance. Earlier editions' questions have been converted to answers, making the book more accessible and informative. Revised to be clearer and less technical. More eclectic, reflecting recent criticisms of "rational choice" theory, in particular the need to supplement it with insights from psychology. Greater attention paid to judicial behavior, realistically modeled and explained in economic terms. Incorporates insights from the veritable explosion of books and articles published in the last few years on economic analysis of law.

Competition for energy resources worldwide will almost certainly increase because of population growth and economic expansion, especially in countries such as China and India, with large populations. In addition, environmental concerns with the use of

certain energy sources add a complicating factor to decisions about energy use. Therefore there is likely to be an increased commitment around the world to invest in energy systems. The World Scientific Handbook of Energy provides comprehensive, reliable and timely sets of data on energy resources and uses; it gathers in one publication a concise description of the current state-of-the-art for a wide variety of energy resources, including data on resource availability worldwide and at different cost levels. The end use of energy in transportation, residential and industrial areas is outlined, and energy storage, conservation and the impact on the environment included. Experts and key personnel straddling academia and related agencies and industries provide critical data for further exploration and research. Experts in these various areas who provide relevant data for further exploration and research include former Head of the Nuclear Reactors Directorate of the CEA; Director of the Potential Gas Agency, who leads a team of 100 geologists, geophysicists and petroleum engineers; former CEO of an Icelandic engineering company that specializes in the design, construction and operation of "Kalina" binary power plants for geothermal, biomass and industrial waste heat recovery applications; Chairman of the Scottish Hydrogen and Fuel Cells Association; former Director of the Geo-Heat Center at the Oregon Institute of Technology, who received the Patricius Medal from the German Geothermal Association for "his pioneer work in the direct use of geothermal energy"; Division Director of NETL's Strategic Center for Coal, who provides expert guidance and consultation to major DOE-funded clean coal technology and carbon sequestration demonstration projects; an internationally

recognized expert in the physics and technology of Inertial Confinement Fusion (ICF); former Senior Scientist and Director of the Center for Distributed Generation and Thermal Distribution with Washington State University, who was responsible for state policy, technical assistance to resource developers and investigations related to geothermal energy development; a main author on the 2005 Billion Ton Report and 2011 Billion Ton Update; and many more extremely well published and well known individuals straddling academia and related agencies and industries.

In recent years, the U.S. federal government has invested approximately \$463 billion annually in interventions that affect the overall health and well-being of children and youth, while state and local budgets have devoted almost double that amount. The potential returns on these investments may not only be substantial but also have long-lasting effects for individuals and succeeding generations of their families. Ideally, those tasked with making these investments would have available to them the evidence needed to determine the cost of all required resources to fully implement and sustain each intervention, the expected returns of the investment, to what extent these returns can be measured in monetary or nonmonetary terms, and who will receive the returns and when. As a result of a number of challenges, however, such evidence may not be effectively

produced or applied. Low-quality evidence and/or a failure to consider the context in which the evidence will be used may weaken society's ability to invest wisely, and also reduce future demand for this and other types of evidence. Advancing the Power of Economic Evidence to Inform Investments in Children, Youth, and Families highlights the potential for economic evidence to inform investment decisions for interventions that support the overall health and well-being of children, youth, and families. This report describes challenges to the optimal use of economic evidence, and offers recommendations to stakeholders to promote a lasting improvement in its quality, utility, and use.

Economic Evaluation in U.S. Health Care CUA Press

Economic Evaluation in U.S. Health Care provides an overview of

the methodologies that can be applied to both drug and non-drug interventions. The text addresses the perspectives of different stakeholders involved in the application of economic evaluation in the U.S., including manufacturers, health plans, and the

government, in order to give students a thorough understanding of how methods are applied to decision-making and health policy. The authors provide case studies for students to apply methods to real life situations.
