On 31 May 2009, flight AF447, an Airbus A330-200, took off from Rio de Janeiro bound for Paris. At 2 h 10, a position message and some maintenance messages were transmitted by the ACARS automatic system. After this nothing was heard of from the aircraft. Six days later bodies and airplane parts were found by the French and Brazilian navies. All 228 passengers and crew members on board are presumed to have perished in the accident. A massive search by air and sea craft for the plane's black boxes failed so far.

AIR CRASH INVESTIGATIONS, LOST OVER THE ATLANTIC The Crash of Air France Flight 447 THE FINAL REPORT Lulu.com

Sky Tales: More Insights from A Life In The Skies William Palmer

This book discusses the latest advances in research and development, design, operation and analysis of transportation systems and their complementary infrastructures. It reports on both

theories and case studies on road and rail, aviation and maritime transportation. The book covers a wealth of topics, from accident analysis, vehicle intelligent control, and human-error and safety issues to next-generation transportation systems, model-based design methods, simulation and training techniques, and many more. A special emphasis is given to smart technologies and automation in transport, as well as to user-centered, ergonomic and sustainable design of transport systems. The book, which is based on the AHFE 2017 International Conference on Human Factors in Transportation, held on July 17-21, Los Angeles, California, USA, mainly addresses transportation system designers, industrial designers, human-computer interaction researchers, civil and control engineers, as well as vehicle system engineers. Moreover, it represents a timely source of information for transportation policy-makers and social scientists dealing with traffic safety, management, and sustainability issues in transport.

Understanding Air France 447 Routledge

On January 15, 2009, about 1527 eastern standard time, US Airways flight 1549, an Airbus Industrie A320-214, N106US, experienced an almost complete loss of thrust in both engines after encountering a flock of birds and was subsequently ditched on the Hudson River about 8.5 miles from LaGuardia Airport (LGA), New York City, New York. The flight was en route to Charlotte

Douglas International Airport, Charlotte, North Carolina, and had departed LGA about 2 minutes before the in-flight event occurred. The 150 passengers and 5 crewmembers evacuated the airplane via the forward and overwing exits. One flight attendant and four passengers were seriously injured, and the airplane was substantially damaged beyond repair. The National Transportation Safety Board determines that the probable cause of this accident was the ingestion of large birds into each engine, which resulted in an almost total loss of thrust in both engines and the subsequent ditching on the Hudson River.

On 31 May 2009, the Airbus A330 flight AF 447 took off from Rio de Janeiro Gale o airport bound for Paris Charles de Gaulle. At around 2 h 02, the Captain left the cockpit for a short nap. At around 2 h 08, at flight level 350, the crew made a course change of 12 degrees to the left, to avoid bad weather. At 2h 10min 05, likely following the obstruction of the Pitot probes by ice crystals, the speed indications were incorrect and some automatic systems disconnected. The aeroplane's flight path was not controlled by the two copilots. They were rejoined 1 minute 30 later by the Captain, while the aeroplane was in a stall situation that lasted until the impact with the sea at 2 h 14 min 28 s, killing all 228 persons on board. It took almost two years to recover the wreck of the aircraft

from a depth of 4.000 metres. The accident resulted from a succession of events, such as inconsistency between the measured airspeeds, inappropriate control inputs, and the crew's failure to diagnose the stall situation

International Aviation Labour Law explores the status quo of the international regulation of labour and employment within the air transport industry and provides a detailed analysis of the regulatory endeavours undertaken at the international, European and domestic level to harmonise aviation labour regulations and ensure adequate labour standards for aircrew members. Offering an original insight into the regulation of labour in the aviation sector and airline industry, it analyses regulatory endeavours undertaken at the international, European and domestic level, exploring the main challenges arising from non-uniform and fragmented regulation of labour standards in the air transport sector. In particular, it investigates whether aviation labour regulations are sufficiently harmonised at an international level to ensure adequate labour standards for aircrew members. Key concerns relating to aviation labour are dealt with from a regulatory and practical perspective, and the current normative gaps are examined in view of potential future regulatory trends and solutions via a thorough analysis of the applicable legislation, landmark court decisions and the use of practical examples, to provide an overview of the various nuances of the topic. The book identifies and explore the main implications and repercussions of regulatory asymmetry and highlights the critical role of labour for air transport and how discrepancies in labour regulation may affect the practice of flying and the essence of aviation safety. It emphasises a strong need for international regulatory coordination and is a key reference for a varied audience of students, academics, professionals and rule-makers involved in the air transport arena and for all those who have an interest in the regulation of labour and employment in aviation.

The most comprehensive coverage to date of Air France 447, an Airbus A330 that crashed in the ocean north of Brazil on June 1, 2009, killing all 228 persons on board. Written by A330 Captain, Bill Palmer, this book opens to understanding the actions of the crew, how they failed to understand and control the problem, and how the airplane works and the part it played. All in easy to understand terms. Addressed are the many contributing aspects of weather, human factors, and

airplane system operation and design that the crew could not recover from. How each contributed is covered in detail along with what has been done, and needs to be done in the future to prevent this from happening again. Also see the book's companion website: UnderstandingAF447.com

A Pilot's Journey AIR CRASH INVESTIGATIONS, LOST OVER THE ATLANTIC The Crash of Air France Flight 447 THE FINAL REPORT

How can a 10 pound bird bring down a 150,000 pounds aircraft? How would you feel if you were the captain on that aircraft, responsible for 155 souls? What would you do to prevent the disaster? How would you communicate with other crew members and the passengers? How would you determine where to try to ditch the plane in an unprecedented situation? How would training and experience influence your decision? What lessons can we learn from Captain Sullenberger's calm actions which incredibly saved all lives onboard? Successful Ditching of US Airways Flight 1549 on Hudson River by Captain Chesley Sullenberger and First Officer Jeff Skiles on January 15, 2009 - This edition provides all the details of this incredible event, transcripts of pilot's communications and the final results of a thorough investigation. They analyzed in great detail the aircraft, the accident, the damages; the personnel on board and on the ground, their training and their communications, their actions during the accident; the survival aspects, the birds, the meteorology and more. Finally they drew their conclusions and put together their recommendations based on the results of the examination, to prevent similar events in the future.

Capt. Lumba has been a pilot, union leader and airline executive. He is one of Indian aviation's legends. His memoir will take you through the by-lanes of Indian Civil Aviation in all its glory. The book explains the Pilot Strike of 1992, the creation and success of Alliance Air (possibly India's first low-cost carrier), the operational start-up of IndiGo, India's premier and most successful low-cost carrier. Finally, it covers the safe landing at Laksh Farms, a place termed as a piece of heaven on earth! Readers will find this book more than just a memoir. There are valuable lessons of personal behaviour and integrity that are invaluable to ruminate about. In addition, the historically accurate perspectives of starting and running an airline provide valuable tips for students studying aviation

management or even for executives operating in that space today.

AIR CRASH INVESTIGATIONS MIRACLE ON THE HUDSON RIVER The Ditching of US Airways Flight 1549 Lulu.com

On Tuesday 24 March 2015, the Airbus A320-211 registered D-AIPX operated by Germanwings took off from Barcelona, Spain, at 09:00 with destination Düsseldorf, Germany. At 09:41, the aircraft crashed into the mountains northeast of Marseille. The investigation into the causes of the crash revealed that the co-pilot, at a moment when he was alone in the cockpit, had deliberately flown the plane into the mountains killing all 150 persons on board. The investigation revealed also that the co-pilot was under medical treatment for depressions by several health care providers. Neither of those providers informed any aviation authority, nor any other authority about the co-pilot's mental state. No action could have been taken by the authorities and/or his employer to prevent him from flying on the day of the accident, because they were not informed about the co-pilot's mental state of mind.

Captain Lim Khoy Hing is an ex-airline pilot who is passionate about flying, having worked all his life high above the clouds since leaving college. During his career, he was fortunate enough to fly the latest fly-by-wire planes such as the Boeing 777 and the Airbus A320, A330 and A340. He logged a total of 25,500 flying hours, or about 20 trips to the moon and back! Capt. Lim finished his flying career with AirAsia X, retiring from flying in 2011. He is currently a Flight Simulator Instructor with AirAsia X, and columnist for the carrier's in-flight magazine, Travel 3Sixty. His first book, Life in the Skies, was published in 2013 and is a regional bestseller.
