Information  
Technology for Efficient  
Project Delivery

Springer

Change is inevitable in all communities: they both grow and decline. Planning is a means by which we have sought to manage this change. It has not always succeeded in providing the types of settlements and environments which many residents and others want, either because it is operating with the wrong policies or because it is failing to ensure that the right policies are effectively implemented. These

failings have opened planning to criticism by a dominant neoliberal orthodoxy which shapes an increasingly difficult environment in which planning has to operate. Planning for Small Town Change builds on an underexploited selection of international research and the authors' English case studies to consider the efficacy of planning for change. Drawing on insightful small town experiences, three themes emerge: understanding and conceptualising change; appreciating the potential within place; and the mechanisms for planning and delivery.

The research draws on many examples of how key actors have made a significant difference to specific places and provides important insights into how the planning process can be better matched to the long-term and complex challenges faced. Whilst small town experiences are often neglected, they are found to be particularly insightful in understanding the potential roles of local communities and the importance of place quality when planning for change.

#### Agriculture MDPI

For more than thirty years, Construction Project Management by Clough and Sears has been considered the preeminent guide to all aspects of the construction project

management process, including the Critical Path Method (CPM) of project scheduling. Now, for the first time, the book is part of a learning package that comes with access to an online course built around the book provided by online training leader Red Vector. The book, and by extension the class, combines a solid foundation in the principles and fundamentals of CPM with particular emphasis on project planning, demonstrated through an example project. The Sixth Edition features new pedagogical elements such as end-of-chapter problems and questions, and a full suite of instructor's resources. New information on the

Earned Value Analysis (EVA) system and introductory coverage of Building Information Modeling (BIM) and Lean Construction in the context of project scheduling help make this text thorough and up-to-date.

OHS Electronic Management Systems for Construction

Routledge

"This book allows students to learn the essentials of theory and practice of Strategic Information Technology (IT) Management through serialization of key points. The book is structured into three units and ten appendices. Unit I on Strategic Role of IT explains the need for IT management and discusses its role in business and decision making. Besides,

different types of IT and business models are explained. Unit II on Planning for IT Support discusses the various IT management processes, IT service management, management of information resources, strategic planning for IT and IT investments. Unit III on Ensuring IT Support focuses on implementation of security aspects, organization structure of IT and management of information systems. In addition, the appendices complement the three units with a view to equipping the readers with the basics of information technology, information systems, strategy and planning, engineering economy, risk management, and

configuration management." --

are featured. These

results often precede

journal publication and represent the most current research. The principal aim of the IFIP series is to encourage education and the dissemination and exchange of information about all aspects of computing. *Processes and Foundations for Virtual Organizations* Modell- und computer-gestützte Unternehmensplanung  
The four-volume set LNCS 7333-7336 constitutes the refereed proceedings of the 12th International Conference on Computational Science and Its Applications, ICCSA 2012, held in Salvador de Bahia, Brazil, in June 2012. The four volumes contain papers presented in the

following workshops:  
7333 - advances in high performance algorithms and applications (AHPAA); bioinspired computing and applications (BIOCA); computational geometry and applications (CGA); chemistry and materials sciences and technologies (CMST); cities, technologies and planning (CTP); 7334 - econometrics and multidimensional evaluation in the urban environment (EMEUE); geographical analysis, urban modeling, spatial statistics (Geo-An-Mod); 7335 - optimization techniques and applications (OTA); mobile communications (MC); mobile-computing, sensing and actuation for cyber physical systems (MSA4CPS);

remote sensing (RS); 7336 - software engineering processes and applications (SEPA); software quality (SQ); security and privacy in computational sciences (SPCS); soft computing and data engineering (SCDE). The topics of the fully refereed papers are structured according to the four major conference themes: 7333 - computational methods, algorithms and scientific application; 7334 - geometric modelling, graphics and visualization; 7335 - information systems and technologies; 7336 - high performance computing and networks.

*BIM in the Construction Industry* Elsevier

This book contains 19 peer-reviewed papers

on the subject of BIM in the construction industry. These articles cover recent advances in the development of BIM technologies and applications in the field of architecture, engineering, and construction (AEC) industry.

Designing and Implementing the Student Online Project Planning and Tracking System John Wiley & Sons

Building Information Modelling (BIM) is being debated, tested and implemented wherever you look across the built environment sector.

This book is about Heritage Building Information Modelling (HBIM), which necessarily differs from the commonplace applications of BIM to new construction.

Where BIM is being used, the focus is still very much on design and construction. However, its use as an operational and management tool for existing buildings, particularly heritage buildings, is lagging behind. The first of its kind, this book aims to clearly define the scope for HBIM and present cutting-edge research findings alongside international case studies, before outlining challenges for the future of HBIM research and practice. After an extensive introduction to HBIM, the core themes of the book are arranged into four parts: Restoration philosophies in practice Data capture and visualisation for maintenance and repair Building performance

Stakeholder engagement This book will be a key reference for built environment practitioners, researchers, academics and students engaged in BIM, HBIM, building energy modelling, building surveying, facilities management and heritage conservation more widely.

**Assistive Technologies: Concepts, Methodologies, Tools, and Applications**

Springer-Verlag  
With cloud applications and services now widely available, film and video professionals have all the tools they need to work together on centralized platforms and effectively collaborate across separate

desktop, web, and mobile devices. In *Film and Video Production in the Cloud*, veteran video production consultant Jack James provides a practical guide to cloud processes, concepts, and workflows as they relate to the most widely used cloud applications in the industry. Topics discussed include the benefits of cloud storage, cloud-based production and postproduction pipelines, project and asset management, distribution and archiving, budget and security considerations, and crowdsourcing. This book will allow readers to:

- Harness cloud-based tools and processes to enhance your film and video production pipeline and

help your creative team collaborate effectively across separate desktop, web, and mobile devices; • Discover the benefits of cloud-based film and video production, as well as key approaches to budgeting and planning, project and asset management, distribution and archiving, security considerations, and crowdsourcing in the cloud; • Learn how to apply fundamental cloud methodologies and best practices to the most widely used cloud services and applications in the industry, including Adobe Creative Cloud, Autodesk A360, Avid Media Composer Cloud, Asana, Basecamp, and Shotgun.

Lulu.com  
Occupational accidents have a massive personal and social

cost as well as a major financial cost. The construction industry is one of the most dangerous industries, accounting for around 20–30% of all occupational deaths worldwide. The accompanying financial cost is either absorbed directly or passed on in the form of higher insurance costs. In addition, regulatory bodies have started to impose legal accountability on all the parties along the construction supply chain. OHS is hard to implement. Construction projects are complex, with a fluid workforce, and the regulatory framework is highly elaborate. OHS Electronic Management Systems for Construction presents a theoretical

framework which is designed to overcome these difficulties, integrating OHS management in construction using knowledge management and web technologies. This framework is explained in a clear step-by-step way, as are features such as a systematically developed corporate safety memory, and a virtual learning portal to facilitate on-demand safety training. The ultimate aim of this book is to aid the development of an established safety culture at the organisational level, and the formation of an industry-wide community of safety practice. This is essential reading for OHS professionals and construction managers

attempting to change their industry for the better, as well as advanced students and researchers.

Technology, Design and Process Innovation in the Built

Environment MDPI

Künstliche Intelligenz (KI) ist der Bereich der Informatik, bei dem es darum geht, Maschinen mit fortgeschrittener Intelligenz auszustatten. In diesem Buch folgen Sie den Spuren der Geschichte dieser Disziplin von den Träumen der ersten Pioniere im 18.

Jahrhundert bis hin zu der weitaus erfolgreicheren Arbeit der heutigen KI-Forscher. KI wird mehr und mehr zum Bestandteil unseres alltäglichen Lebens. Die Technologie ist u. a. bereits Teil von

Gesichtserkennungssystemen, Spracherkennungssoftware, Suchmaschinen im Internet und im Gesundheitswesen eingesetzten Robotern. Dank der zahlreichen Diagramme und Abbildungen und der problemlos zu verstehenden Beschreibungen von KI-Programmen bekommen auch auf diesem Gebiet unerfahrene Leserinnen und Leser hier einen umfassenden Einblick darin, wie diese und andere KI-Systeme funktionieren. Die durchgehenden (und doch vergleichsweise dezenten) Anmerkungen am Ende jedes Kapitels enthalten zudem Hinweise auf Quellen- und Forschungsmaterial,

das KI-Lernenden und KI-Forschern wichtige Hilfestellung liefern kann. Dieses Buch ist die Geschichte eines Forschungsbereichs, der Forscher, Philosophen und Autoren über Jahrhunderte gefesselt hat und dies immer noch tut. • Das Buch enthält Erläuterungen zu einer Unmenge an Meilensteinen in der Geschichte der KI genauso wie zu modernen KI-Anwendungen. • Sie erfahren hier Wesentliches über die gesamte Geschichte des Forschungsbereichs aus der Sicht eines „Eingeweihten“, denn der Autor hat über 50 Jahre im Bereich der KI gearbeitet. • Es gelingt Nilsson hervorragend, technische Inhalte auch für Laien

verständlich zu erklären.

**Knowledge Management in the Construction**

**Industry: A Socio-Technical**

**Perspective** Springer Processes and Foundations for Virtual Organizations contains selected articles from PRO-VE'03, the Fourth Working Conference on Virtual Enterprises, which was sponsored by the International Federation for Information Processing (IFIP) and held in Lugano, Switzerland in October 2003. This fourth edition includes a rich set of papers revealing the progress and achievements in the main current focus areas: -VO breeding environments; - Formation of collaborative networked

organizations; - Ontologies and knowledge management; -Process models and interoperability; - Infrastructures; -Multi-agent approaches. In spite of many valid contributions in these areas, many research challenges remain. This is clearly stated in a number of papers suggesting a new research agenda and strategic research roadmaps for advanced virtual organizations. With the selected papers included in this book, PRO-VE pursues its double mission as a forum for presentation and discussion of achievements as well as a place to discuss and suggest new directions and research strategies.

Global

The Arab World is perceived to be a region rampant with constructed and ambiguous national identities, overwhelming wealth and poverty, religious diversity, and recently the Arab uprisings, a bottom-up revolution shaking the foundations of pre-established, long-standing hierarchies. It is also a region that has witnessed a remarkable level of transformation and development due to the accelerated pace imposed by post-war reconstruction, environmental degradation, and the competition among cities for world visibility and tourism. Accordingly, the Arab World is a prime

territory for questioning urban design, inviting as it does a multiplicity of opportunities for shaping, upgrading, and rebuilding urban form and civic space while subjecting global paradigms to regional and local realities. Providing a critical overview of the state of contemporary urban design in the Arab World, this book conceptualizes the field under four major perspectives: urban design as discourse, as discipline, as research, and as practice. It poses two questions. How can such a diversity of practice be positioned with regard to current international trends in urban design? Also, what constitutes the specificity of the Middle Eastern experience in light of

the regional political and cultural settings? This book is about urban designers 'on the margins': how they narrate their cities, how they engage with their discipline, and how they negotiate their distance from, and with respect to global disciplinary trends. As such, the term margins implies three complementary connotations: on the global level, it invites speculation on the way contemporary urban design is being impacted by the new conceptualizations of center-periphery originating from the post-colonial discourse; on the regional level, it is a speculation on the specificity of urban design thinking and practice within a particular geographical and cultural context

(here, the Arab World); and finally, on the local level, it is an a **BIM Development and Trends in Developing Countries: Case Studies** Springer Science & Business Media  
 Individuals with disabilities often have difficulty accomplishing tasks, living independently, and utilizing information technologies; simple aspects of daily life taken for granted by non-disabled individuals. Assistive Technologies: Concepts, Methodologies, Tools, and Applications presents a comprehensive collection of research, developments, and knowledge on technologies that enable disabled

individuals to function effectively and accomplish otherwise impossible tasks. These volumes serve as a crucial reference source for experts in fields as diverse as healthcare, information science, education, engineering, and human-computer interaction, with applications bridging multiple disciplines. *Planning for Small Town Change* IGI Global Public participation and local community involvement have taken centre stage in heritage practice in recent decades. In contrast with this established position in wider heritage work, public engagement with conservation practice is less well developed. The focus here is on conservation

as the practical care of material cultural heritage, with all its associated significance for local people. How can we be more successful in building capacity for local ownership and leadership of heritage conservation projects, as well as improving participative involvement in decisions and in practice? This book presents current research and practice in community-led conservation. It illustrates that outcomes of locally-led, active participation show demonstrable social, educational and personal benefits for participants. Bringing together UK and international case studies, the book combines analysis of theoretical and applied

approaches, exploring the lived experiences of conservation projects in and with different communities. Responding to the need for deeper understanding of the outcomes of heritage conservation, it examines the engagement of local people and communities beyond the expert and specialist domain. Highlighting the advances in this important aspect of contemporary heritage practice, this book is a key resource for practitioners in heritage studies, conservation and heritage management. It is also relevant for the practising professional, student or university researcher in an emerging field that overarches

professional and academic practice. Heritage Building Information Modelling CRC Press  
 This handbook incorporates new developments in automation. It also presents a widespread and well-structured conglomeration of new emerging application areas, such as medical systems and health, transportation, security and maintenance, service, construction and retail as well as production or logistics. The handbook is not only an ideal resource for automation experts but also for people new to this expanding field. Computational Science and Its Applications -- ICCSA 2012 Transportation Research Board
