Language Structures and Social Interaction Cambridge University Press

Literature and Language Teaching is for teachers and trainers who want to incorporate literature into the language classroom. It is suitable for teacher trainers, teacher development groups or teachers working on their own. This book contains tasks and activities which encourage reflection on some of the issues and debates involved in using literature in the language classroom and explore different approaches to using literature with teenage and adult learners at all levels. It suggests criteria for selecting and evaluating materials for classroom use and identifies some of the distinctive features of novels, short stories, poems and plays so that these can be successfully exploited in the classroom. A wide range of practical ideas and activities for developing materials is provided. Tasks also encourage the observation and

assessment of lessons using literacy texts, and draw on English language material by a variety of authors from all over the world. Literature and Language Teaching Council of Europe Teaching is a tough and challenging job and society demands more from its teachers than ever before. This new edition is an essential companion for those training to teach providing an overview of important professional issues that all future teachers need to engage with in order to succeed in the classroom. The book is equally valuable to those training to teach in both elementary and secondary education and aims to give students the confident start they need in the classroom. Features new to this edition include more balanced elementary education coverage, and four new chapters on: child protection issues, teaching pupils with English as an Additional Language, cross-curricular teaching issues and your first teaching post: applications, interviews and induction.

Teacher Training for English-Medium Instruction in Higher Education BookSurge

English-medium instruction (EMI) has become a pervasive teaching model in recent higher education. The implementation of EMI programs requires changes in university teaching methods since most lecturers need to adapt their contents and the way they teach them to successfully work in foreign language environments. The rapid proliferation of such programs has resulted in concern among teaching staff, who have felt pushed towards teaching their subject content through a non-native language with little or no previous training. As a result, many recent studies have highlighted the importance and urgency to train teaching staff in terms of language proficiency and the appropriate teaching methods, techniques, and strategies to be applied in EMI lessons. *Teacher Training for English-Medium Instruction in Higher Education* is an academic research publication that provides comprehensive research on effective approaches and experiences in teacher training for EMI at universities both in terms of language skills and teaching methodologies and that analyzes the design and development of comprehensive teacher training programs that successfully engage these EMI programs. It has profound implications for the development of the international profile of higher education institutions as it provides information on how to train highly-qualified lecturers to successfully teach students from different nationalities. Featuring a wide range of topics such as assessment, curriculum design, and learning styles, this book is ideal for pre- and in-service teachers, language specialists, content specialists, administrators, deans, higher education faculty, researchers, practitioners, curriculum designers, policymakers, academicians, and students.

In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. *Science Teaching Reconsidered* provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.
