Computer-Aided Production Management by Asbjorn Rolstadas ... Computer-aided manufacturing also known as Computer-aided Modeling or Computer-aided Machining is the use of software to control machine tools and related ones in the manufacturing of work pieces. This is not the only definition for CAM, but it is the most common; CAM may also refer to the use of a computer to assist in all operations of a manufacturing plant, including planning, management, transportation and storage. Its primary purpose is to create a faster production process and components a Computer-aided manufacturing - Wikipedia The work deals with computer-aided manufacture, layout planning and materials handling, production control, microcomputers, process control and hierarchical distributed computing. Three trends are identified: (i) The need, technical feasibility and economic viability of

providing computing power within the various functional activities, e.g. design, production control, production engineering etc., of the company.
