This book examines the challenges posed by English, a foreign language, as a language of teaching and learning for community secondary schools in Tanzania in terms of academic performance. The book probes the necessity for having two languages of instruction in the Tanzanian educational system. While Kiswahili, the native language, is predominantly understood by the majority of people, the discussion in this book indicates that most students in community secondary schools in Tanzania are incompetent in understanding, writing, listening, reading, and speaking English, a language they use in learning and doing their examinations, especially in the early stages of their secondary studies. The incompetence in the above-mentioned skills is mostly caused by their inability to cope with the abrupt transition in the languages of instruction from their pre-primary and primary school study [Kiswahili] to secondary school study [English]. Moreover, most teachers are unable to use the English language as a means to impart knowledge or facilitate learning to their students, leading them to code-switching and code-mixing. This book poses a challenge to countries whose students pass through a transition from one language of instruction to another in their educational systems, helping them to make appropriate decisions in regard to the appropriate language of teaching and learning.

For generations, technical market analysts have relied on the Wyckoff method for understanding price/volume interactions—a breakthrough technique created by Richard D. Wyckoff, one of the most influential traders in stock market history. More recently, many technical analysts have also applied the Lowry Analysis, an exceptionally powerful approach to understanding the forces of supply and demand that are the starting point for all macro-analysis. Now, for the first time, two leaders at Lowry Research discuss how to combine these methods. Drawing on more than 45 years of

experience as technical analysts, Richard A. Dickson and Tracy Knudsen introduce a uniquely powerful, objective, and quantifiable approach to applying traditional price/volume analysis. By understanding their techniques, investors can gain insights unavailable through other technical methodologies, and uncover subtle indications of emerging trend shifts before other methods can reveal them.

In this book, project management expert Dr. Alexander Laufer leads an all-star team of practitioners and thought leaders in presenting a powerful project leadership framework. Laufer's framework addresses the toughest challenges of new product development: large, complex projects composed of many diverse, geographically distributed, and highly interdependent components; organizational change; and repeated and risky tasks. Laufer reveals core leadership principles that are crucial to successful project leadership in dynamic and complex environments, regardless of industry, project goals, or stakeholders. Then, together with his contributors, he presents eight chapter-length case studies covering exceptionally challenging projects in a wide spectrum of industries and products – from developing missiles to reorganizing companies, building spacecraft and dairy plants to flying solar-powered airplanes. Readers will discover new ways to unleash the power of autonomy and learning; adapt to change on a timely basis; “give up” control without “losing” control; use face-to-face interaction to maximize alignment; manage “no fun” missions in hostile environments; deliver

on bold ideas through sheer preparation; learn from practice – and unlearn lessons that need to be unlearned. Mastering the Leadership Role in Project Management will be invaluable to executives, project leaders, and aspiring project leaders in all organizations – regardless of their project goals, backgrounds, or experience.
