Brunner and Suddarth's Textbook of Medical-Surgical Nursing Elsevier
Hewer's Textbook of Histology for Medical Students, Ninth Edition Revised focuses on the minute structure of the cells, tissues, and organs of the human body and the reactions of tissues and cells to various conditions. The publication first elaborates on the techniques used in the study of cells and tissues, cell and cell division, and

epithelia. Discussions focus on the qualitative and quantitative methods for the identification of the composition of cells and tissues, surface membrane of the cell, cytoplasmic contents, and the nucleus. The text then examines blood and lymph, development and destruction of blood corpuscles, and connective tissues. The manuscript takes a look at adipose tissue, cartilage, and bone, including development and functions of adipose tissue, hyaline cartilage,

fibro-cartilage, elastic cartilage, and joints and synovial membranes. The book then ponders on muscular tissue, nervous tissue, peripheral nerves, ganglia, neuroglia, and meninges, blood circulatory system, lymphatic system, thymus, and spleen, and adrenals, thyroid, and parathyroid glands. The publication is a valuable reference for medical students and readers interested in the structure of the cells, organs, and tissues of the human body.

The third edition of *Physiology and Anatomy for Nurses and Healthcare Practitioners: A homeostatic approach* presents homeostasis as a dynamic concept that provides the basis for understanding health and well-being. It recognises how failure to respond to homeostatic disturbances results in imbalances responsible for signs and symptoms of ill-health, and describes how healthcare interventions

seek to reverse those imbalances. Accompanied by colour illustrations and a description of related anatomy, the book provides an integrated explanation of body functioning. It discusses the organisation of the human body, main features and processes that must be controlled for health, the organ systems that act as homeostatic regulators, and effectors of homeostatic regulation. It also discusses influences on homeostasis and provides case studies that

place examples of ill health and health care into the context of homeostasis. Features of the third edition include: An overview of microbiology and principles of infection management Expanded information on pharmacological principles and actions of the major classes of drugs Expanded discussion on physiological functions in relation to specific pathologies Updates on how the Human Genome project has impacted healthcare Additional case

studies to illustrate the healthcare provider's role as an external agent of homeostatic control Photographs of common clinical conditions Access to an accompanying website with supplemental information An essential physiology and anatomy text, this book guides readers through the basic structure and functions of the body systems to more complex issues of clinical disorders and healthcare practice. Coverage includes the cardiovascular, lymphatic,

nervous, endocrine, reproductive, and respiratory systems as well as skeletal muscle, embryo development, and circadian rhythms.
