Along with its painful economic costs, the financial crisis of 2008 raised concerns over the future of international policy making. As in recessions past, new policy initiatives emerged, approaches that placed greater importance on protecting national interests than promoting international economic cooperation. Whether in fiscal or monetary policies, the control of currencies and capital flows, the regulation of finance, or the implementation of protectionist policies and barriers to trade, there has been an almost worldwide trend toward the prioritizing of national economic security. But what are the underlying economic causes of this trend, and what can economic research reveal about the possible consequences? Prompted by these questions, Robert C. Feenstra and Alan M. Taylor have brought together top researchers with policy makers and practitioners whose contributions consider the ways in which the global economic order might address the challenges of globalization that have arisen over the last two decades and that have been intensified by the recent crisis. Chapters in this volume consider the critical linkages between issues, including exchange rates, global

imbalances, and financial regulation, and plumb the political and economic outcomes of past policies for what they might tell us about the future of the global economic cooperation.

While large, multinational corporations have supported the removal of tariffs, behind the scenes these firms have fought for protection in the form of product regulations, including testing, labeling, and registration requirements. Unlike tariffs, these regulations can raise fixed costs, excluding smaller firms from the market and shifting profits toward global giants. *Narrowing the Channel* demonstrates that globalization and globalized firms can paradoxically hinder rather than foster economic cooperation as larger firms seek to protect their markets through often unnecessarily strict product regulations. To illustrate the problem of regulatory protectionism, Robert Gulotty offers an in-depth analysis of contemporary rulemaking in the United States and the European Union in the areas of health, safety, and environmental standards. He shows how large firms seek regulatory schemes that disproportionately disadvantage small firms. When multinationals are embedded in the local economy, governments too have an incentive to use these regulations to shift profits back home. Today, the key challenge to governing global trade is not how much trade occurs but who is allowed to participate, and this book shows that new rules will be needed to allow governments to widen the benefits of global commerce and avoid further inequality and market concentration.

European social movements have become increasingly visible in recent years, generating intense public debates. From anti-austerity and pro-democracy movements to right-wing nationalist movements, these movements expose core conflicts around European democracy, identity, politics and society. The Routledge Handbook of Contemporary European Social Movements offers a comprehensive interdisciplinary overview of the analysis of European social movements, helping to orient scholars and students navigating a rapidly evolving field while developing a new agenda for research in the area. The book is divided into eight sections: Visions of Europe; Contemporary models of democracy; Historical evolution of major European movements; Feminism and sexualities; Movement diffusion within and beyond Europe; Anti-austerity movements; Technopolitical and media movements; and Movements, parties and movement-parties. Trade is a cornerstone concept in economics worldwide. This updated second edition of the essential graduate textbook in international trade brings readers to the forefront of knowledge in the field and prepares students to undertake their own research. In *Advanced International Trade*, Robert Feenstra integrates the most current theoretical approaches with empirical evidence, and these materials are supplemented in each chapter by theoretical and empirical exercises. Feenstra explores a wealth of material, such as the Ricardian and Heckscher-Ohlin models, extensions to many goods and factors, and the role of tariffs, quotas, and other trade policies. He examines imperfect competition, offshoring, political economy, multinationals, endogenous growth, the gravity equation, and the organization of the firm in international trade. Feenstra also includes a new chapter on monopolistic competition with heterogeneous firms, with many applications of that model. In addition to known results, the book looks at some particularly important unpublished results by various authors. Two appendices draw on index numbers and discrete choice models to describe methods applicable to research problems in international trade. Completely revised with the latest developments and brand-new materials, *Advanced International Trade* is a classic textbook that will be used widely by students and practitioners of economics for a long time to come. Public Space: *Between Reimagination and Occupation* examines contemporary public space as a result of intense social production reflecting contradictory trends: the long-lasting effects of the global crisis, manifested in supranational trade-offs between political influence, state power and private ownership; and the appearance of global counter-actors, enabled by the expansion of digital communication and networking technologies and rooted into new participatory cultures, easily growing into mobile cultures of protest. The highlighted cases from Europe, Asia, Africa and North America reveal the roots of the pre-crisis processes of redistribution of capital and power as an aspect of the transition from the consumerist past into the post-consumerist present, by tracing the slow growth of social discontent that has led only a few years later to the mobilization of a new kind of self-conscious globally-acting class. This edited volume brings together a broad range of interdisciplinary discussions and approaches, providing sociologists, cultural geographers, and urban planning academics and students with an opportunity to explore the various social, cultural, economic and political factors leading to reappropriation and reimagination of the urban commons in the cities within which we live.

This book analyses the potential for active stakeholder engagement in the energy transition in the Baltic Sea Region (BSR) in order to foster clean energy deployment. Public acceptability and bottom-up activities can be critical for enduring outcomes to an energy transition. As a result, it is vital to

understand how to unlock the potential for public, community and prosumer participation to facilitate renewable energy deployment and a clean energy transition – and, consequently, to examine the factors influencing social acceptability. Focussing on the diverse BSR, this book draws on expert contributions to consider a range of different topics, including the challenges of social acceptance and its policy implications; strategies to address challenges of acceptability among stakeholders; and community engagement in clean energy production. Overall, the authors examine the practical implications of current policy measures and provide recommendations on how lessons learnt from this 'energy lab region' may be applied to other regions. Reflecting an interdisciplinary approach in the social sciences, this book is an essential resource for scholars, students and policymakers researching and working in the areas of renewable energy, energy policy and citizen engagement, and interested in understanding the potential for bottom-up, grassroots activities and social acceptability to expedite the energy transition and reanimate democracies.
