 Cost overrun is common
 in public and private
 sector projects. Costs
 tend to grow, plans fail
 and financial problems
 follow, but how can we
 approve the right projects
 if we cannot estimate

their true cost? This book, for academics in project management, management accounting and corporate finance, as well as for managers in the public and private sectors, offers a new way of thinking about the causes and consequences of cost overrun for firms and society. It demonstrates that there is a logic behind cost growth and overrun, identifies projects and situations that are more vulnerable, and examines the effects of increased costs. It further identifies the negative and positive consequences of cost overrun, analyses how and why preconditions for cost overrun differ when the logic governing private firms dominates versus the logic of the political sector, and explains why cost can sometimes be of lesser importance to decision makers.

Pumping Station Design, Third edition shows how to apply the fundamentals of various disciplines and subjects to produce a well-integrated pumping station that will be

reliable, easy to operate and maintain, and free from design mistakes. In a field where inappropriate design can be extremely costly for any of the foregoing reasons, there is simply no excuse for not taking expert advice from this book. The content of this second edition has been thoroughly reviewed and approved by many qualified experts. The depth of experience and expertise of each contributor makes the second edition of *Pumping Station Design* an essential addition to the bookshelves of anyone in the field.

Seattle Tolt Water Supply Mixed Asbestiform Removal Study Jeffrey Frank Jones

The cruise missile is the principal innovation in U.S. weaponry in the early 1980s. Because it is inexpensive and versatile, it is likely to be used for a wide range of military missions. At the same time, it has become a delicate issue in arms control and alliance politics. Although cruise missile programs are among the most dynamic elements in the U.S. defense buildup, their consequences have not been fully appreciated. This book assesses the

complex set of technological, budgetary, strategic, diplomatic, and political implications of this new weapon as a contribution to public understanding of its pervasive influence on diplomacy and military affairs. Cruise missile technology and development programs are dealt with in chapters by John C. Toomay; Godron MacDonald, Jack Ruina, and Mark Balaschak; Ron Huisken; and John C. Baker. Military uses and arm control implications are discussed by Bruce Bennett and James Foster; Roger H. Palin; Richard Burt; Michael MccGwire; George H. Quester; and William H. Kinkade. Diplomatic and national political questions are analyzed by Raymond L. Garthoff; Robert J. Art and Stephen E. Ockenden; Gregory F. Treverton; Lawrence D. Freedman; and Catherine McArdle Kelleher.
