 Dynamics of Knowledge Society Transformation
 A Guide to Econometric Methods for the Energy-Growth Nexus presents, explains and compares all the available econometrics methods pertinent to the energy-growth nexus. Chapters cover methods and applications, starting with older econometric methods and moving toward new ones. Each chapter presents the method and facts about its applications, providing step-by-step explanations about the ways the method meets the demands of the field. In addition, applied case studies and practical research steps are included to enhance the learning process. By touching on all relevant econometric methods for the energy-growth nexus, this book gives energy-growth researchers and students all they need to tackle the subject matter. Presents econometric methods for short- and long-term forecasting Provides methods and step-by-step explanations on the ways the method meets the demands of the field Contains applied case studies and practical research steps

Dynamics of Capital Account and Current Account in Sri Lanka International Monetary Fund
 This handbook covers a wide spectrum of issues relating to small states. Chapters in the volume have been grouped under the three main themes of economic, social and environmental issues. The economics sections include chapters dealing with trade, finance and regulatory frameworks, while the social theme covers health, migration, population ageing, as well as overall social wellbeing. The environmental theme examines matters such as measuring environmental performance, natural disasters, the ocean economy, and the validity of the Sustainable Development Goals. One major issue is the definition of small states. As this volume demonstrates, generally speaking, population is used to measure country size in the literature. However, it clearly emerges that there is no real consensus as to the population cut-off point that distinguishes small states from large ones. While the approaches taken by the authors vary, in all cases the chapters draw practical policy implications for small states. The book can therefore be considered as a wide-ranging depository of information on small states with the aim of deriving policy prescriptions, and thus as an excellent resource for academics, students and policymakers.

Extending Financial Inclusion in Africa Emerald Group Publishing

Tourism economics is partly based on established principles from the economics discipline, but it also incorporates elements from sociology, psychology, organization theory and ecology. It has over the years turned into an appealing multi-disciplinary oriented approach to the understanding of the impacts of leisure time in a modern society, including cultural heritage, sustainable quality of life, and industrial organization of the hospitality industry. The increasing dynamics in the tourist industry and its worldwide effects will continue to attract the attention of both the research and the policy sector in the years to come. Rather than speculating on non-observed facts, there is a clear need for evidence-based research in order to map out the complex dynamics of the tourist industry. The present volume comprises novel studies – mainly of a quantitative-analytical nature – on the supply, demand and contextual aspects of modern tourism. It contains a sound mix of theory, methodology, policy and case studies on various tourism issues in different parts of the world.

Tourism and Foreign Direct Investment Emerald Group Publishing

Since the 1970s, globalization has created an economic environment of interdependency between nations. Now, many countries in European and the MENA (Middle East and Northern Africa) regions must grapple with the need to increase public revenue while maneuvering through a global “race-to-the-bottom” tax competition. The Handbook of Research on Public Finance in Europe and the MENA Region explores economic development and public finance by providing critical insight into the use

of public finance and policy and illuminating the intricacies of these topics through discussion of theory, empirical work, and policy objectives. This book is ideally designed for business professionals, policy makers, financiers, students and researchers in the fields of public policy and economics.

Handbook of Research on Sustainable Development Goals, Climate Change, and Digitalization Routledge

Geared towards policy makers, researchers, academics, and business and management professionals, *The Gains and Pains of Financial Integration and Trade Liberalization* helps readers develop new theories and models for analysing the future trends in finance and trade-related issues.

A Guide to Econometric Methods for the Energy-Growth Nexus International Monetary Fund
 This volume presents current developments in the fields of banking and finance from an international perspective. Featuring contributions from the 4th International Conference on Banking and Finance Perspectives (ICBFP), this volume serves as a valuable forum for discussing current issues and trends in the banking and financial sectors, especially in light of the global economic challenges triggered by financial institutions. Using the latest theoretical models, new perspectives are brought to topics such as international banking and finance, Islamic banking, fintech, and corporate finance. Offering an opportunity to explore the challenges of a rapidly changing industry, this volume will be of interest to academics, policy makers, and scholars in the fields of banking, insurance, and finance.

Covid-19 Pandemic And Energy Markets: Commodity Markets, Cryptocurrencies And Electricity Consumption Under The Covid-19 Springer Nature

Recent Developments in Asian Economics is a crucial resource of current, cutting-edge research for any scholar of international finance and economics. Chapters cover a wide range of topics, such as social welfare systems, organizational culture, sustainability, the impact of economic policy uncertainty, and more.

A Dynamic ARDL Model IGI Global

Economic forecasting is a key ingredient of decision making both in the public and in the private sector. Because economic outcomes are the result of a vast, complex, dynamic and stochastic system, forecasting is very difficult and forecast errors are unavoidable. Because forecast precision and reliability can be enhanced by the use of proper econometric models and methods, this innovative book provides an overview of both theory and applications. Undergraduate and graduate students learning basic and advanced forecasting techniques will be able to build from strong foundations, and researchers in public and private institutions will have access to the most recent tools and insights. Readers will gain from the frequent examples that enhance understanding of how to apply techniques, first by using stylized settings and then by real data applications--focusing on macroeconomic and financial topics. This is first and foremost a book aimed at applying time series methods to solve real-world forecasting problems. *Applied Economic Forecasting using Time Series Methods* starts with a brief review of basic regression analysis with a focus on specific regression topics relevant for forecasting, such as model specification errors, dynamic models and their predictive properties as well as forecast evaluation and combination. Several chapters cover univariate time series models, vector autoregressive models, cointegration and error correction models, and Bayesian methods for estimating vector autoregressive models. A collection of special topics chapters study Threshold and Smooth Transition Autoregressive (TAR and STAR) models, Markov switching regime models, state space models and the Kalman filter, mixed frequency data models, nowcasting, forecasting using large datasets and, finally, volatility models. There are plenty of practical applications in the book and both EViews and R code are available online at authors' website.

Financial Sector Reforms and Economic Growth in Ghana MDPI

This book presents high-quality papers from the Third International Conference on Smart Computing and Informatics (SCI 2018–19), organized by the School of Computer Engineering and School of Computer Application, Kalinga Institute of Industrial Technology Deemed to be University, Bhubaneswar, from 21 to 22 December 2018. It includes advanced and multi-disciplinary research on the design of smart computing and informatics, focusing on innovation paradigms in system knowledge, intelligence and sustainability that have the potential to provide realistic solutions to various problems in society, the environment and industry. The papers featured provide a valuable contribution to the deployment of emerging computational and knowledge transfer approaches, optimizing solutions in varied disciplines of science, technology and health care.

Predictive Econometrics and Big Data Academic Press

Economic, social, political, and cultural institutions, and institutional change reflect shared journeys of humanity throughout history. This edited volume explores dynamics, trends, and implications of institutional change in emerging markets, by focusing on theories, concepts, and mechanisms of institutional development. Presenting research by eminent scholars and experts engaged in education and research, they address and discuss the most recent issues in the field, reveals new insights into the dynamics of institutional change for researchers interested in development of new theories and comparative studies, especially in the era of emerging markets. Topics range from dynamics of institutional change and development within the Group of Twenty (G20), and the European Union with an assessment of Brexit impact, to institutional quality measurement, public administration reforms, as well as emergent topics such as the effects of energy and globalization. It provides new international business theories, and sheds light on the way to global peace by producing a better understanding of the dynamics of historical change. The book is intended for a wide range of global audience, and should serve as a useful reference in education and research, offering innovative and productive discussions, as well as satisfy scholarly and intellectual interests, regarding institutional development and a broad spectrum of its interactions with functioning of markets and economies.

Quantitative Methods in Tourism Economics Academic Press

This book presents recent research on robustness in econometrics. Robust data processing techniques – i.e., techniques that yield results minimally affected by outliers – and their applications to real-life economic and financial situations are the main focus of this book. The book also discusses applications of more traditional statistical techniques to econometric problems. Econometrics is a branch of economics that uses mathematical (especially statistical) methods to analyze economic systems, to forecast economic and financial dynamics, and to develop strategies for achieving desirable economic performance. In day-by-day data, we often encounter outliers that do not reflect the long-term economic trends, e.g., unexpected and abrupt fluctuations. As such, it is important to develop robust data processing techniques that can accommodate these fluctuations.

Is There a Debt-threshold Effect on Output Growth? Routledge

This paper studies the long-run impact of public debt expansion on economic growth and investigates whether the debt-growth relation varies with the level of indebtedness. Our contribution is both theoretical and empirical. On the theoretical side, we develop tests for threshold effects in the context of dynamic heterogeneous panel data models with cross-sectionally dependent errors and illustrate, by means of Monte Carlo experiments, that they perform well in small samples. On the empirical side, using data on a sample of 40 countries (grouped into advanced and developing) over the 1965–2010 period, we find no evidence for a universally applicable threshold effect in the relationship between public debt and economic growth, once we account for the impact of global factors and their spillover effects. Regardless of the threshold, however, we find significant negative long-run effects of public debt build-up on output growth. Provided that public debt is on a downward trajectory, a country with a high level of debt can grow just as fast as its peers in the long run.

Causes, Costs, and Responses Springer

"This book provides relevant theoretical frameworks and the latest empirical research findings in the area of information technology as it relates to sustainable economic development and the development of knowledge societies"--Provided by publisher.

Global Issues in Banking and Finance Springer

This book is a collection of papers for the Special Issue "Quantitative Methods for Economics and Finance" of the journal *Mathematics*. This Special Issue reflects on the latest developments in different fields of economics and finance where mathematics plays a significant role. The book gathers 19 papers on topics such as volatility clusters and volatility dynamic, forecasting, stocks, indexes, cryptocurrencies and commodities, trade agreements, the relationship between volume and price, trading strategies, efficiency, regression, utility models, fraud prediction, or intertemporal choice.

Energy Market and Energy Transition: Dynamics and Prospects IGI Global

The book provides a new conceptualisation of inflation in underdeveloped economies, through Sri Lanka's historical experience. It outlines a general theory of nationalisms in their diverse manifestations across the world, within a historical perspective of capitalist development and underdevelopment. The book, therefore, seeks to capture the production mode holistically, within both its infrastructural and superstructural levels probing their interactions. The theoretical structure through which inflation is analysed synthesises the theory of unproductive labour and Marxian theory of prices of production with labour surplus theory of late Dr. S. B. D. De Silva in the context of underdevelopment. In this light, Professor David Laibman's Allocation Problem is resolved within a Marxist framework to provide an operational significance to the theory and its application. In the same vein the book also provides a new theoretical interpretation of Sri Lanka's historical development from the British period onwards through application of theories of capitalist

development and surplus labour.

New Dynamics in Banking and Finance Springer Science & Business Media

This paper enquires the dynamics of current account and capital account in Sri Lanka for the period 2001:Q1 to 2016:Q1 and also examines the role of some policy variables such as exchange rate and interest rate in this dynamics. Estimated autoregressive distributed lag (ARDL) bound testing approach to cointegration followed by error correction representation of the ARDL model have found that current account is caused by capital account and exchange rate, where capital account causes to produce a deficit in current account. In the dynamic adjustment of current account due to exchange rate, an evidence of J-curve phenomenon is noticed. Capital account is neither caused by current account nor by exchange rate but interest rate has a positive impact on it. Robustness of these findings is testified by the vector autoregression model, Wald test of Granger causality followed by an impulse response analysis and a variance decomposition analysis. These analyses, in addition, establish a negative impact of interest rate on current account. With the best of knowledge this is the first study that reveals the dynamics of current and capital account of Sri Lanka. Such a dynamics is critical from the policy perspective. Policy makers should caution before capital account liberalization.

Economic, Social and Environmental Issues BoD - Books on Demand

Global Trade in the Emerging Business Environment explores global trade dynamics in the emerging business environment. Globalization, technological advancements, Industry 4.0, China's Belt and Road Initiative, and the COVID-19 pandemic are changing the global trade ecosystem. Companies and countries need to evaluate these rapid changes and adjust their respective business strategies and policy formulations. This book discusses such strategies and how firms and countries can reposition themselves within the current environment.

The Gains and Pains of Financial Integration and Trade Liberalization IGI Global

The Economics and Econometrics of the Energy-Growth Nexus recognizes that research in the energy-growth nexus field is heterogeneous and controversial. To make studies in the field as comparable as possible, chapters cover aggregate energy and disaggregate energy consumption and single country and multiple country analysis. As a foundational resource that helps researchers answer fundamental questions about their energy-growth projects, it combines theory and practice to classify and summarize the literature and explain the econometrics of the energy-growth nexus. The book provides order and guidance, enabling researchers to feel confident that they are adhering to widely accepted assumptions and procedures. Provides guidance about selecting and implementing econometric tools and interpreting empirical findings Equips researchers to get clearer pictures of the most robust relationships between variables Covers up-to-date empirical and econometric methods Combines theory and practice to classify and summarize the literature and explain the econometrics of the energy-growth nexus

Advances in Applied Economic Research Emerald Group Publishing

This is the first volume to examine and shed significant light on the issues, challenges and prospects presented by foreign direct investment (FDI) in tourism - a topic of increasing relevance in light of the covid-19 pandemic and economic consequences. This book addresses the need to examine the TFDI phenomenon considering resilient tourism development approaches and includes discussion on impacts of a rapidly evolving global pandemic on tourism. Recognising that its impact on tourism has only just begun, the book includes early estimates of the damage to the tourism economy and TFDI over 2020 and beyond. It considers how the COVID-19 pandemic may change society, the economy, and tourism, and how some of the key research needs to understand these changes and contribute to a more sustainable post-pandemic tourism sector. Through a collection of chapters focusing on principles, practices and a diverse range of destination case studies, the book considers TFDI from the economic, social and environmental and regulatory perspectives. Thus, the book will advance understanding of the positive and negative impacts of TFDI as well as how emerging problems and wider implications for local economies and communities can be managed more sustainably, while also discussing the transformative opportunities offered by TFDI regarding key economic, social and environmental issues. This will be essential reading for upper-level students and researchers in the field of tourism development.

Smart Intelligent Computing and Applications Springer Nature

How can Turkey increase its medium- and long-term growth potential? Despite episodes of fast growth, this has become a vital question for the Turkish economy, in order to avoid being stuck in a middle-income trap. There has been an increase in the number of studies presenting growth in Turkey and quantifying the sources of economic growth, however, due to the difference in the main underlying assumptions and the time period covered in these studies, the results differ. The second strand of literature on growth in Turkey identifies the relative underperformance of the Turkish economy by developing models with microeconomic foundations. Given the fact that there are a large number of studies investigating the macro dynamics of growth in Turkey, the book's unique focus on the "neglected" issues in growth discussions closes the gap in the existing literature. It addresses the micro, macro, regional, and gender aspects, the environment-energy-growth nexus, as well as the microeconomic dynamics of growth. It also analyses the other significant determinants of long run growth in Turkey such as import dependency and saving-investment decision. The authors provide a macro overview of all of the precluded subjects in order to evaluate them in relation to one other, as well as to derive policy conclusions from them. This book primarily targets academics as well as graduate and undergraduate social sciences and humanities students both in Turkey and other countries. It is also a must read for researchers and policy makers not only in Turkey but also in other developing economies and is of interest to specialists of non-governmental and non-profit organizations.
