Exam Board: AQA
Level: AS/A-level
Subject: Biology First
Teaching: September 2015
First Exam: June 2016
Reinforce students' understanding throughout their course with clear topic summaries and sample questions and answers to help your students target higher grades. Written by experienced teacher Pauline Lowrie, our Student Guides are divided into two key sections, content guidance and sample

questions and answers. Content guidance will: - Develop students' understanding of key concepts and terminology; this guide covers topics 3 and 4: organisms exchange substances with their environment; genetic information, variation and relationships between organisms. - Consolidate students' knowledge with 'knowledge check questions' at the end of each topic and answers in the back of the book. Sample questions and answers will: - Build students' understanding of the different question types, so they can approach questions from topics 3 and 4 with confidence. - Enable students to target top grades with sample answers and commentary explaining

exactly why marks have been awarded.

Whenever a student decides to prepare for any examination, her/his first and foremost curiosity is

about the type of questions that he/she has to face. We feel great pleasure to present before you this book. We have made an attempt to provide unit wise collection of questions asked in KVPY with answer and solutions to majority of questions. Solutions to the questions are not just sketch rather have been written in such a manner that the students will be able to understand the application of concept and can answer some other related questions too. We firmly believe that the book in this form will definitely help a genuine, hardworking student. we have tried our best to keep errors out of this book.

Comment and criticism from readers will be highly appreciated and incorporated in the

subsequent edition. We wish to utilize the opportunity to place on record our special thanks to all team members of Content Development for their efforts to make this wonderful book.

7. 1. 1 Background Uncertainty can be considered as the lack of adequate information to make a

decision. It is important to quantify uncertainties in mathematical models used for design and optimization of nondeterministic engineering systems. In general, uncertainty can be broadly classified into three types (Bae et al. 2004; Ha-Rok 2004; Klir and Wierman 1998; Oberkampf and Helton 2002; Sentz 2002). The first one is aleatory uncertainty (also referred to as stochastic uncertainty or inherent - certainty) - it results from the fact that a system can behave in random ways. For example, the failure of an engine can be modeled as an aleatory uncertainty because the failure can occur at a random time. One cannot predict exactly

when the engine will fail even if a large quantity of failure data is gathered (available). The second one is epistemic uncertainty (also known as subjective uncertainty or reducible - certainty) - it is the uncertainty of the outcome of some random event due to lack of knowledge or information in any phase or activity of the modeling process. By gaining information about the system or environmental factors, one can reduce the epistemic uncertainty. For example, a lack of experimental data to characterize new materials and processes leads to epistemic uncertainty.
