MELANY JESSIE

A Novel/ Legendary Comics

INSTANT NEW YORK TIMES BESTSELLER The #1 New York Times bestselling author of *It Ends with Us*—whose writing is “emotionally wrenching and utterly original” (Sara Shepard, New York Times bestselling author of the *Pretty Little Liars* series)—delivers a tour de force novel about a troubled marriage and the one old forgotten promise that might be able to save it. Quinn and Graham’s perfect love is threatened by their imperfect marriage. The memories, mistakes, and secrets that they have built up over the years are now tearing them apart. The one thing that could save them might also be the very thing that pushes their marriage beyond the point of repair. *All Your Perfects* is a profound novel about a damaged couple whose potential future hinges on promises made in the past. This is a heartbreaking page-turner that asks: Can a resounding love with a perfect beginning survive a lifetime between two imperfect people?

Superman: Up in the Sky Dc Comics

The #1 New York Times bestseller The phenomenal true story of the black female mathematicians at NASA whose calculations helped fuel some of America’s greatest achievements in space. Soon to be a major motion picture starring Taraji P. Henson, Octavia Spencer, Janelle Monae, Kirsten Dunst, and Kevin Costner. Before John Glenn orbited the earth, or Neil Armstrong walked on the moon, a group of dedicated female mathematicians known as “human computers” used pencils, slide rules and adding machines to calculate the numbers that would launch rockets, and astronauts, into space. Among these problem-solvers were a group of exceptionally talented African American women, some of the brightest minds of their generation. Originally relegated to teaching math in the South’s segregated public schools, they were called into service during the labor shortages of World War II, when America’s aeronautics industry was in dire need of anyone who had the right stuff. Suddenly, these overlooked math whizzes had a shot at jobs worthy of their skills, and they answered Uncle Sam’s call, moving to Hampton, Virginia and the fascinating, high-energy world of the Langley Memorial Aeronautical Laboratory. Even as Virginia’s Jim Crow

laws required them to be segregated from their white counterparts, the women of Langley’s all-black “West Computing” group helped America achieve one of the things it desired most: a decisive victory over the Soviet Union in the Cold War, and complete domination of the heavens. Starting in World War II and moving through to the Cold War, the Civil Rights Movement and the Space Race, *Hidden Figures* follows the interwoven accounts of Dorothy Vaughan, Mary Jackson, Katherine Johnson and Christine Darden, four African American women who participated in some of NASA’s greatest successes. It chronicles their careers over nearly three decades they faced challenges, forged alliances and used their intellect to change their own lives, and their country’s future.

Crisis of Control Princeton University Press

than the last. This one-shot offers the curious-and the brave-a glimpse into the nightmare realities that the Batman Who Laughs has created in tales by creators who know what it means to have a truly twisted sense of misfit humor. An Arkham Asylum even more terrifying than what we know? A world of evil Super Pets? All that and more in these new tales of the Multiverse Who Laughs!

As his imagination runs rampant, Ray must join forces with his own fictional character Max Nomax on a reality-bending race to stop the entire universe from imploding... without blowing his own mind in the process. • New York Times Bestselling Author • Written by Grant Morrison (Animal Man, Batman, All Star Superman, Fantastic Four) • This is the compilation of the 6 issue series • Featuring interiors and covers by Frazier Irving (Batman and Robin, Uncanny X-Men) • Includes bonus materials on the making of the comic "Morrison is one of the most adventurous and commercially successful comic-book writers of the past 25 years, retrieving superheroic and science-fictional dispatches from the fringes of consciousness, splattering his chaotic visions onto the page." -- Rolling Stone "I think [Annihilator is] the best stuff I've done yet." -- Frazer Irving From the Hardcover edition.

Nature, Human Nature, and Human Difference Macmillan Publishers Aus.

Around 200,000 years ago, a man--identical to us in all important respects--lived in Africa. Every person alive today is descended from him. How did this real-life Adam wind up father of us all? What happened to the descendants of other men who lived at the same time? And why, if modern humans share a single prehistoric ancestor, do we come in so many sizes, shapes, and races? Showing how the secrets about our ancestors are hidden in our genetic code, Spencer Wells reveals how developments in the cutting-edge science of population genetics have made it possible to create a family tree for the whole of humanity. We now know not only where our ancestors lived but who they fought, loved, and influenced. Informed by this new science, *The Journey of Man* is replete with astonishing information. Wells tells us that we can trace our origins back to a single Adam and Eve, but that Eve came first by some 80,000 years. We hear how the male Y-chromosome has been used to trace the spread of humanity from Africa into Eurasia, why

differing racial types emerged when mountain ranges split population groups, and that the San Bushmen of the Kalahari have some of the oldest genetic markers in the world. We learn, finally with absolute certainty, that Neanderthals are not our ancestors and that the entire genetic diversity of Native Americans can be accounted for by just ten individuals. It is an enthralling, epic tour through the history and development of early humankind--as well as an accessible look at the analysis of human genetics that is giving us definitive answers to questions we have asked for centuries, questions now more compelling than ever.
