It is easy to be confident that an  
appropriate body of advice is available  
to candidates about the content of an  
examination once you have passed it.  
Prospectively, the Primary and Final  
Examinations of the Royal College of  
Pathologists will appear to most to  
involve the assimilation of what seems  
at the time an inexhaustible volume of  
data, and the recent change in the  
College examination system has not  
diminished this concern for the majority

of candidates. The guidelines for training for the new Part I examination state that this is the "major hurdle of the MRCPPath" and it is clear that it will determine whether candidates are suitable for training which will permit them to practise independently as consultants after Part II. These general aims and objectives do not answer questions such as "How much do I need to know about glomerulonephritis?" or "Where do I stop with the lymphomas?" This text attempts to resolve the difficulty of knowing what standard to aim at, using College questions as its starting point. It concentrates on the essential basis of any single answer; many candidates for the new three-year examination will know more about individual topics than is stated here. However, it is the breadth

of information required which is a feature of College examinations and this text should help with this problem.

The Lancet John Wiley & Sons

Edited and written by an international "who's who" of more than 100 authors, including anesthesiologists, nurse anesthetists, bench scientists, a surgeon, and representatives of industry, this text provides a comprehensive history of anesthesia, unique in its focus on the people and events that shaped the specialty around the world, particularly during the past 70 years when anesthesia emerged from empiricism and developed into a science-based practice.

**Cumulated Index Medicus** Synopsis of Pathology

Based on exhaustive research and

interviews, this is the first referenced history of mycology and plant pathology in Canada. It will be of specific interest to plant breeders and pathologists, mycologists, entomologists, horticulturists, students of the sciences, and historians.

Current Catalog JHU Press

Like previous volumes in the "Educational Innovation in Economics and Business" series, this one is genuinely international in terms of its coverage. It reflects the worldwide interest in, and commitment to, innovation in business education with a view to enhancing the learning experience of both undergraduates and postgraduates. It should prove of value to anyone engaged directly in business education.

Springer Science & Business Media  
The authors are highly respected professionals in the UK. It is a short, highly readable and well illustrated book on general and systematic pathology, approached from the point of view of what medical students need to know in order to understand the clinical work they will eventually be doing. Includes a great variety of self-assessment, to reinforce the messages and to test understanding - and to help students prepare for exams. Concise synoptic (not telegraphic text). Appropriate self-assessment material. Only covers core, so student knows the whole book is essential. Includes key objectives. Contains simple and memorable diagrams for reproduction in exams. Ideal for learning as well as examination

review, specifically trying to stimulate the student into assessing his/her own knowledge. The books in the series both complement other available major texts, but also contain enough material to stand in the own right. Provides examination practice. Part of co-ordinated series. Now general and systematic pathology combined in one volume. Further refinement to contents to reflect evolution of what is regarded as core knowledge. Major revision of self-assessment material to match change in style of examination (mainly more EMQ- and OSCE-style questions). New cover design.

Annual Report of the United States Civil Service Commission Elsevier India

An introductory text for health science students, this book provides coverage of general and systemic pathology in a way that is geared towards health science

students. Examples are introduced from clinical pathology and it draws on practical situations and commonly observed diseases to illustrate basic pathological processes.

**Essays on the Early History of Plant Pathology and Mycology in Canada**

McGill-Queen's Press - MQUP

Preeminent historian of medicine Owsei Temkin brought to his writing an awesome range of scholarship, for he was at home in the classical, the medieval, and the modern eras. The essays gathered in this volume deal with all the topics that Temkin considered most important in his work. They were widely commended for their originality, intelligent analysis, and impressive continuity of thought. Temkin explores the history of basic medical sciences, of

health and disease, and of surgery and drug therapy, as well as general questions concerning the historical and philosophical approach to medicine from antiquity to the early twentieth century. In a retrospective introduction which gives the book its name, Temkin relates his writings to his career as a scholar in Germany and the United States. He situates the writings against the background of the development of the study of medical history and provides recollections of such prominent figures as Karl Sudhoff, Henry E. Sigerist, William H. Welch, and Richard H. Shryock.
