Auszug: Der Dodge Charger der Jahre 1966 bis 1978 war ein Sportcoupe der amerikanischen Mittelklasse. Zunächst gehörte es zu der Klasse der Muscle Cars, doch wurden die Motorleistungen nach 1971 wegen strengerer Abgasvorschriften reduziert,

was zu einer Änderung des Charakters dieses Autos führte. Spätere Jahrgänge gehörten damit zu den Personal Luxury Cars. 1964 präsentierte Dodge die Studie eines sportlichen Coupes, welches, einer Mode der Zeit entsprechend, mit Fließheck ("Fastback") und grossem Kühlergrill besonders junge Kunden ansprechen sollte. 1965 gab es eine.

Written with a managerial focus, *New Products Management 11e* by Crawford and Di Benedetto is useful to the practicing new products manager. Along with the management approach, the perspective of marketing is presented throughout which enables the text to have a balanced view. The authors aim to make the book increasingly relevant to its users as this revision is considered to be a "new product." Many new examples, cases, and research along with the most current topics highlight the new edition of *New Products Management*.

When gasoline prices rise, people notice: the news is filled with reports of pinched household budgets and politicians feeling pressure to do something to ameliorate the burden. Yet, raising the gasoline tax to internalize externalities is widely considered by economists to be among the most economic efficiency-improving policies we could implement in the transportation sector. This dissertation brings new evidence to bear on quantifying the responsiveness to changing gasoline prices, both on the intensive margin (i.e., how much to drive) and the extensive margin (i.e., what vehicles to buy). I assemble a unique and extremely rich vehicle-level dataset that includes all new vehicle registrations in California 2001 to 2009, and all of the mandatory smog check program odometer readings for 2002 to 2009. The full dataset exceeds 49 million observations. Using this dataset, I quantify the responsiveness to gasoline price changes on both margins, as well as the heterogeneity in the responsiveness. I develop a novel structural model of vehicle choice and subsequent utilization, where consumer decisions are modeled in a dynamic setting that explicitly accounts for selection on unobserved driving preference at both the time of purchase and the time of driving. This utility-consistent model allows for the analysis of the welfare implications to consumers and government of a variety of different policies, including gasoline taxes and feebates. I find that consumers are responsive to changing gasoline prices in both vehicle choice and driving decisions, with more responsiveness than in many recent studies in the

literature. I estimate a medium-run (i.e., roughly two-year) elasticity of fuel economy with respect to the price of gasoline for new vehicles around 0.1 for California, a response that varies by whether the vehicle manufacturer faces a tightly binding fuel economy standard. I estimate a medium-run elasticity of driving with respect to the price of gasoline around -0.15 for new personal vehicles in the first six years. Older vehicles are driven much less, but tend to be more responsive, with an elasticity of roughly -0.3. I find that the vehicle-level responsiveness in driving to gasoline price changes varies by vehicle class, income, geographic, and demographic groups. I also find that not including controls for economic conditions and not accounting for selection into different types of new vehicles based on unobserved driving preference tend to bias the elasticity of driving away from zero -- implying a greater responsiveness than the true responsiveness. This is an important methodological point, for much of the literature estimating similar elasticities ignores these two issues. These results have significant policy implications for policies to reduce gasoline consumption and greenhouse gas emissions from transportation. The relatively inelastic estimated responsiveness on both margins suggests that a gasoline tax policy may not lead to dramatic reductions in carbon dioxide emissions, but is a relatively non-distortionary policy instrument to raise revenue. When the externalities of driving are considered, an increased gasoline tax may not only be relatively non-distortionary, but even economic efficiency-improving. However, I find that the welfare changes from an increased gasoline tax vary significantly across

counties in California, an important consideration for the political feasibility of the policy. Finally, I find suggestive evidence that the "rebound effect" of a policy that works only on the extensive margin, such as a feebate or CAFE standards, may be closer to zero than the elasticity of driving with respect to the price of gasoline. This suggestive finding is particularly important for the analysis of the welfare effects of any policy that focuses entirely on the extensive margin.

It has long been accepted that the social and cultural meanings of the car far exceed the practical need for mobility. This book marks the first attempt to contribute to road safety, considering, in depth, these meanings and the cultures of driving that are shaped by them. In the *Company of Cars* examines the perspectives that young people have on cars, and explores the broader social and cultural meanings of the car, the potential it is supposed to fulfil, and the anticipated benefits it offers to young drivers. From focus-group research conducted in Australia, the book takes up the views of young people on a range of topics, from media to car use to gender performance. The author looks at the ways in which driving has been defined by articulations of the car that emphasize valued features of the car-

driver, such as gender, youthfulness, status, age, power, raciness, sexiness, ruggedness and competitiveness. The book takes a global perspective on mobility, considering the impact of cars and road safety policy on quality of life, and the value and significance of other modes of travel, in a range of countries. *Jet* Stanford University

El marketing viral se inoculó en el panorama profesional publicitario como una vacuna eficaz económica contra la supuesta inmunidad de las audiencias a los mensajes comerciales. Conseguir que fueran los consumidores quienes transmitieran los anuncios espontáneamente entre sus redes sociales se consideró la panacea en un mercado comunicativo sobresaturado. Sin embargo, la publicidad boca a oreja, basada en recomendaciones, ya conseguía el mismo objetivo desde tiempos ancestrales. Fueron las tecnologías de la información y de la comunicación (TIC) las que posibilitaron el salto exponencial hacia la publicidad viral y, en consecuencia, un cambio de magnitudes sin precedentes: los contenidos comerciales pasaban a ser compartibles a escala planetaria, a la velocidad de un clic. Este libro se centra en detectar las claves creativas comunes que detonaron el contagio de 651 vídeos publicitarios entre los usuarios de las redes sociales digitales. A partir de un constructo analítico formado por drivers creativos, cepas virales y la variable ambigüedad, se propone la fórmula  $V = cc(d+c) + a$ , como base inspiradora para crear publicidad altamente contagiosa.
