""The Mist meets Silent Hill meets Lovecraft meets Doctor Who... a uniquely terrifying game.""
Lovecraft's strange aeons are here. The stars were right and yes, in time even death may die. Humanity exists on the precipice, a handful of survivors teetering on the brink of extinction. The dominion of Earth is lost. The Old Ones have returned. *Strange Aeon* is a roleplaying game in which you, the player, take on the role of survivor and scavenger in a terrifying post-apocalypse setting. With the help of fellow players you must remain alive while battling the forces of the mythos, enduring the toxic fumes of the Morbus mist and the ever crumbling state of human civilisation. You have only one advantage over the other humans still clinging to life in the aftermath of The Event; you have in your possession a mythos relic known as The Celestial Sphere. With the sorcery contained in this artefact you can travel through time, into future and past versions of the Earth.

Every day, more and more kinds of historical data become available, opening exciting new avenues of inquiry but also new challenges. This updated and expanded book describes and demonstrates the ways these data can be explored to construct cultural heritage knowledge, for research and in teaching and learning. It helps humanities scholars to grasp Big Data in order to do their work, whether that means understanding the underlying algorithms at work in search engines or designing and using their own tools to process large amounts of information. Demonstrating what digital tools have to offer and also what 'digital' does to how we understand the past, the authors introduce the many different tools and developing approaches in Big Data for historical and humanistic scholarship, show how to use them, what to be wary of, and discuss the kinds of questions and new

perspectives this new macroscopic perspective opens up. Originally authored 'live' online with ongoing feedback from the wider digital history community, *Exploring Big Historical Data* breaks new ground and sets the direction for the conversation into the future. *Exploring Big Historical Data* should be the go-to resource for undergraduate and graduate students confronted by a vast corpus of data, and researchers encountering these methods for the first time. It will also offer a helping hand to the interested individual seeking to make sense of genealogical data or digitized newspapers, and even the local historical society who are trying to see the value in digitizing their holdings.

Writing That Makes Sense, 2nd Edition World Scientific

The 21st century business environment demands more analysis and rigor in marketing decision making. Increasingly, marketing decision making resembles design engineering-putting together concepts, data, analyses, and simulations to learn about the marketplace and to design effective marketing plans. While many view traditional marketing as art and some view it as science, the new marketing increasingly looks like engineering (that is, combining art and science to solve specific problems). Marketing Engineering is the systematic approach to harness data and knowledge to drive effective marketing decision making and implementation through a technology-enabled and model-supported decision process. (For more information on Excel-based models that support these concepts, visit DecisionPro.biz.) We have designed this book primarily for the business school student or marketing manager, who, with minimal background and technical training, must understand and employ the basic tools and models associated with Marketing Engineering. We offer an accessible overview of the most widely used marketing engineering concepts and tools and show how they drive the collection of the right data and information to perform the right analyses to make better marketing plans, better product designs, and better marketing decisions. What's New In the 2nd Edition While much has changed in the nearly five years since the first edition of Principles of Marketing Engineering was published, much has remained the same. Group Work Taylor & Francis

The author explains why it's essential to begin the preparations by deciding what the meeting is intended to accomplish. That, in turn, determines what kind of meeting you should conduct: informational, advisory, or problem-solving. The author breaks down the essential tasks involved and even suggests the right type of person to handle each one. She describes various types of troublesome meeting attendees-from accusers and apathetics to fence-sitters and know-it-alls-and offers advice on how to deal tactfully but firmly with them all. The author also tackles working effectively with the media, a subject that terrifies most planners. True stories of public meetings, both good and bad, add humor to her no-nonsense narrative. Follow her step-by-step checklist and leave nothing to chance."

Successful Public Meetings, 2nd ed. Macmillan Education AU

The Comparative Education Research Centre (CERC) at the University of Hong Kong is proud and privileged to present this book in its series CERC Studies in Comparative Education. Alan Rogers is a distinguished figure in the field of non-formal education, and brings to this volume more than three decades of experience. The book is a masterly account, which will be seen as a milestone in the literature. It is based on the one hand on an exhaustive review of the literature, and on the other hand on extensive practical experience in all parts of the world. It is a truly comparative work, which fits admirably into the series Much of the thrust of Rogers' work is an analysis not only of the

significance of non-formal education but also of the reasons for changing fashions in the development community. Confronting a major question at the outset, Rogers ask why the terminology of non-formal education, which was so much in vogue in the 1970s and 1980s, practically disappeared from the mainstream discourse in the 1990s and initial years of the present century. Much of the book is therefore about paradigms in the domain of development studies, and about the ways that fashions may gloss over substance.
