ALANNAH BARRON

Canadian Books in Print Zed Books Ltd.

Parts one and two of this volume present the theoretical lenses used to study the social contexts of education. These include long-established foundations disciplines such as sociology of education and philosophy of education as well as newer theoretical perspectives such as critical race theory, feminist educational theory, and cultural studies in education. Parts three, four, and five demonstrate how these theoretical lenses are used to examine such phenomena as globalization, media, popular culture, technology, youth culture, and schooling. This groundbreaking volume helps readers understand the history, evolution, and significance of this wide-ranging, often misunderstood, and increasingly important field of study. This book is appropriate as a reference volume not only for scholars in the social foundations of education but also for scholars interested in the cultural contexts of teaching and learning (formal and informal). It is also appropriate as a textbook for graduate-level courses in Social Foundations of Education, School and Society, Educational Policy Studies, Cultural Studies in Education, and Curriculum and Instruction.

The Treatment of the Holocaust in Canadian History and Social Science Textbooks McGraw-Hill Ryerson

The degree to which Canadian history and social science textbooks inform and sensitize Canadian students to the events of the Holocaust is examined. Evaluated by a panel of independent judges and presented in comparative perspectives, 72 history and social science textbooks authorized for use in Canada's secondary schools were found to have offered inadequate treatment of the subject matter. The findings remained consistent on all measures of which the evaluation scale was comprised and ways in which data were manipulated. The poor performance shown by the textbooks analyzed held on both quantitative and qualitative measures employed in the evaluation process. In addition, 208 high school students of the Toronto area polled for the purposes of this report confirmed the rather meagre contribution of current textbooks to the understanding and knowledge of the Holocaust. The causes for the textbook profile unfolded in this report are

attributed, in part, to the structure of domination and power relations in Canada of which the school curriculum is an expression. The applicability of the findings to the general character of Canadian educational processes and the way they respond to the plight of other minority groups are also discussed. (Author/LH)

Science Education in Canadian Schools McGraw-Hill Ryerson Mainstream textbooks present economics as an objective science free from value judgements; that settles disputes by testing hypotheses; that applies a pre-determined body of principles; and contains policy prescriptions supported by a consensus of professional opinion. The Economics Anti-Textbook argues that this is a myth - one which is not only dangerously misleading but also bland and boring. It challenges the mainstream textbooks' assumptions, arguments, models and evidence. It puts the controversy and excitement back into economics to reveal a fascinating and a vibrant field of study - one which is more an 'art of persuasion' than it is a science. The Economics Anti-Textbook's chapters parallel the major topics in the typical text, beginning with a boiled-down account of them before presenting an analysis and critique. Drawing on the work of leading economists, the Anti-Textbook lays bare the blind spots in the texts and their sins of omission and commission. It shows where hidden value judgements are made and when contrary evidence is ignored. It shows the claims made without any evidence and the alternative theories that aren't mentioned. It shows the importance of power, social context and legal framework. The Economics Anti-Textbook is the students' guide to decoding the textbooks and shows how real economics is much more interesting than most economists are willing to let on.

Fundamental world changes that simultaneously undermine a nation-state's charisma and promote the rise of a supra-national system have wide-ranging effects upon national states within a modern global society. My dissertation empirically examines the effects of social and cultural globalization on systems of mass schooling, which are central institutions in every country. Globally, primary and secondary education initially emerged as the premier tool for nation-states to create a unified national citizenry loyal to their country and socialized into a common

cultural tradition. I examine the extent to which this original nationalizing purpose of schooling is challenged by the increased emphases on universal human rights and diversity in civic education. The analyses consist of two sections. Hierarchical linear models are used to analyze a unique primary data source of 521 social science textbooks from 74 countries during the period 1970-2008. These findings show a worldwide increase in emphasis on human rights and increases in discussions of diversity in well-established liberal democracies. Cross-national, quantitative analyses are complemented by a qualitative case study of social science curricula in British Columbia (BC), which examines nation-building within a context of strong emphasis on diversity and human rights. The BC study utilizes currently approved high school citizenship education textbooks as well as older textbooks dating back to 1871. It also draws on a selection of historical documents, including Ministry of Education reports, curricular frameworks, and high school exit exams. Process-wise, I find the incorporation of human rights and diversity reflects macro-level changes in national and global society. Content-wise, I find four main approaches to reconciling ideas of human rights and diversity with national identity: (1) framing human rights and multiculturalism as part of national identity, (2) using pedagogical approaches that promote multiple perspectives and individual agency, (3) celebrating social and scientific figures and accomplishments as the source of national pride, and (4) drawing on exogenous sources to affirm state legitimacy. This study is one of the first to theorize that civic education worldwide is moving away from a national focus and to provide empirical evidence of this trend. A key implication is that educational systems are being repurposed from their original goal of constructing a unitary national citizenry to a new view emphasizing human diversity and equality in a globally interconnected world. Further, students are increasingly taught that the global civil society and non-state actors are important and legitimate agents of social change. *Canadiana* Routledge

Taking a collection of seminal articles from the Journal of Curriculum Studies, this book offers readers a vantage point for thinking about the worlds of schools and curricula, focusing in particular on the concept of seeing schools, curricula and teaching in new ways. Each of the chapters sheds fresh light on the ways of thinking the aforementioned. Themes include: classrooms and teaching pedagogy science and history education school and curriculum development students' lives in schools. Written by an international group of distinguished scholars from Britain, North America, Sweden and Germany, the chapters draw on the perspectives offered by curriculum and pedagogical theory, history, ethnography, sociology, psychology and organisational studies and experiences in curriculum-making. Together they invite many questions about why teaching and

curricula must be as they are. Rethinking Schooling provides new futures for education and alternative ways of seeing them.

McGraw-Hill Ryerson Health Issues 9 Peterson's

Volume 1 of a three-volume study of science education in Canadian schools, describing the philosophy and methodology of the study and including an analysis of science textbooks used in Canadian schools. The introduction presents criticisms and objectives of the study, the scope and strategy, the research conducted, an analysis of science curriculum policies, and the official aims and strategies.

Peterson's Private Secondary Schools is everything parents need to find the right private secondary school for their child. This valuable resource allows students and parents to compare and select from more than 1,500 schools in the U.S. and Canada, and around the world. Schools featured include independent day schools, special needs schools, and boarding schools (including junior boarding schools for middle-school students). Helpful information listed for each of these schools include: school's area of specialization, setting, affiliation, accreditation, tuition, financial aid, student body, faculty, academic programs, social life, admission information, contacts, and more. Also includes helpful articles on the merits of private education, planning a successful school search, searching for private schools online,

finding the perfect match, paying for a private education, tips for taking the necessary standardized tests, semester programs and understanding the private schools' admission application form and process.
