Life Drawing is not so much a unique system of drawing the human form as it is a new way of conceptualizing it. To draw the figure, the artist

must "have an idea of what the figure to be drawn is doing" -- he must "sense the nature and condition of the action, or inaction." In this book, Mr. Bridgman, who for nearly 50 years lectured and taught at the Art Students League of New York, explains in non-technical terms and illustrations in hundreds of finely rendered anatomical drawings how best to find the vitalizing forces in human forms and how best to realize them in drawing. Mr. Bridgman begins by examining

movement. After abstracting the main masses of the body -- head, chest, and hips -- into their rough geometrical equivalents, he gives complete instructions for building a simple model which mounts these masses on wire. By manipulating this scale model, the student may observe how these masses move in space and into what relationships such movement brings them. Once the student understands how the human form moves, the

author tackles the actual problems of drawing the human figure in motion. He first covers simple drawing and building of the figure, then balance, rhythm, turning or twisting, wedging, passing and locking, and the more complex relationship of the masses -- distribution, light and shade, mouldings (concave and convex), proportion and how to measure it, and movable masses. From here instruction turns to specific areas of the anatomy; the head and features, including the

neck; the torso, front and back views; the abdominal arch; the shoulder girdle; the upper limbs, hands, and fingers; and the lower limbs, thigh and leg, knee, and finally foot. Every point of instruction and principle is illustrated in one of nearly 500 of Mr. Bridgman's own "life" drawings. There is no student nor serious artist, either amateur or professional, who cannot profit greatly from Bridgman's instruction. Like his famous anatomy course at the Art Students League, it is likely to

vitalize your work with the human form.

Hoch in den Bergen liegt die sagenumwobene Stadt Urithiru, erreichbar nur über die zwölf Eidtore. Hier versucht die junge Edelfrau Schallan Davar die Geheimnisse der uralten Ordensgemeinschaften zu entschlüsseln, die sich einst die Strahlenden Ritter nannten. Nur mit ihrer Hilfe können die Eidtore benutzt werden, und nur ihre Splitterklingen verleihen

den Strahlenden übermenschliche Fähigkeiten. Aber wer waren sie wirklich, und warum wurden sie einst aufgelöst? Während Schallan nach Antworten sucht, die bei der Neugründung der Orden helfen können, begreift Fürst Dalinar, dass seine Vision, die Fürsten des Königreichs Alethkar wieder zu einen, noch viel zu klein gedacht war. Nicht nur die Alethi, sondern alle Völker von Roschar müssen vereint werden, denn es droht die alles verheerende

Wüstwerdung und damit das Ende von ganz Roschar. Doch ein finsterer Schatten liegt auf dieser Hoffnung – Fürst Dalinars eigene, blutbefleckte Vergangenheit ...
Heads, Features and Faces Courier Corporation
 What is the difference between art anatomy and Bridgman's concept of the human machine? The human machine is the body as not only a fixed framework but also as a complex work of art which moves and was designed to move. In over 400

drawings, George B. Bridgman demonstrates the machine through the presentations which made him a gifted lecturer and teacher in his nearly fifty years at the Art Students League in New York and which gave life to drawings by his many students during those years. All skeletal and muscular systems are fully identified, and all are shown in front, back, and side views. The Human Machine begins with the framework of bones. In each section (head, neck, hand, arm, forearm,

elbow, trunk, shoulder, back, scapular region, pelvis, hip, thigh, leg, knee, foot, and toe as well as the combinations of the major sections working together), George Bridgman starts with the skeletal components of the system; then he adds the muscles, shows the changes in the muscles as the body moves and, finally, shows the appearance of the bodily section in action. At the title implies, Bridgman, throughout, supplements his anatomical work with comparative drawings of

simple machines. The anatomical approach to figure drawing is the foundation for the study of human form, and as in his other books on figure drawing, Bridgman's Life Drawing and The Book of a Hundred Hands, Bridgman's approach to the subject is important and unique. The Human Machine will give students and serious artists the conception of the human structure as the complex of beautiful machines it is, and will show how bone and muscle structures are solely responsible for our

movements and for the shapes which we, at various times, display. Walter de Gruyter GmbH & Co KG

In 1927, the leading art schools of the United States were invited to participate in a contest sponsored by the Art Students League of New York. A well-known artist and teacher, George B. Bridgman, directed the jury that selected the best figure drawings.

Afterward, Bridgman assembled this splendid gallery of the best images from the competition.

Intermediate-level students will benefit from the study of these complete and detailed drawings. Sketches in charcoal, pencil, wash, pen and ink, and crayon include a tremendous variety of styles, poses, and techniques. In addition to its value as a handbook, this collection also offers an authentic reflection of the era's excellent draftsmanship.

Ideal for beginning to intermediate artists, "Constructive Anatomy" begins with instruction on drawing hands and works its way through the human body giving detailed instruction on how to draw realistic human figures. Bridgman's drawing methodology builds upon the analysis of human

anatomy, how the skeleton fits together, and how muscle sits upon the skeleton to create the human form. Once an artist comprehends the anatomical construction of the human body great confidence can be gained in realistically depicting the human body. With consideration to three dimensional perspective and how figures look as they move through space "Constructive Anatomy" provides a foundation for life drawing that the aspiring artist can build upon throughout their

artistic life.

First published in 1924,
"Bridgman's Life Drawing"
is famed art instructor
George Bridgman's
instructive course on
drawing the human
anatomy. Bridgman was
born in Canada in 1865,
but lived most of his life in
the United States and
studied under painter and
sculptor Jean-Léon
Gérôme at the École des
Beaux-Arts in Paris, as
well as under the famed
painter Gustave

Boulanger. Bridgman had
a long and illustrious
career as a teacher of
anatomy and figure
drawing at the Art
Students League of New
York. He taught thousands
of students over many
years, including numerous
notable artists such as
Norman Rockwell, Will
Eisner, Elizabeth Cady
Stanton Blake, and Archie
Boyd Teater. In
"Bridgman's Life Drawing"
we find the synthesis of
his technique on how to
draw the human figure.
Bridgman instructs that
students must first gain a

sense of the movement of
the human form by
understanding the
underlying structure.
From this the realistic
portrayal of the human
figure can be done by
building up the form with
consideration of light and
shadow. Bridgman in turn
breaks down the different
parts of the anatomy to
create a complete
instruction manual on life
drawing. This edition is

George B. Bridgman. Excellent book of anatomical drawing instruction. Ideal for beginning to intermediate artists, begins with instruction on drawing hands and works its way through the human body giving detailed instruction on how to draw realistic human figures. The drawings that are presented here show the conceptions that have proved simplest and most effective in constructing the human figure. The eye in drawing must follow a line or a plane or a mass.

In the process of drawing, this may become a moving line, or a moving plane, or a moving mass. The line, in actual construction, must come first; but as mental construction must precede physical, so the concept of mass must come first, that of plane second, that of line last. Masses of about the same size or proportion are conceived not as masses, but as one mass; those of different proportions, in respect to their movement, are conceived

as wedging into each other, or as morticed or interlocking.
