Just like Mark Twain's Tom Sawyer and Huckleberry Finn, this novel about life "back in the day" for an imaginative farm boy is an endearing, timeless coming-of-age adventure that is sure to become a classic. Through Teddy's eyes and heart, the idyllic farm life viewed in magazines and on TV appears to be out of reach. For Teddy, life looks so much better over the fence or down the road. He experiences his young life filled with disappointments, bullies, broken dreams, fear, strained relationships, and even death. In spite of it all, Teddy never quits believing in his dream of the way life can be. What keeps his dream alive? Why does Teddy run in the deep darkness of a cow pasture? What causes his cascade of confusing emotions? How do the eyes of Teddy's heart enable him to come through a transformation? Readers, young and older, will find some of themselves in Teddy's story—in his everyday struggles, wonderings, and moments of joy. One only has to read with the eyes of the heart and have the courage and hope to become a more complete self. In the transformation, there is always a blessing.

Give your technology a performance review: Our smart phones, PDAs, and computers often make less work in one area while making much more work in others. Review your technology to make sure it's delivering on its promise. Cut out the small talk: Small talk builds superficial relationships, which is a grand waste of time. Ask better questions to make instant connections that'll benefit you for years to come. Written in the uniquely humorous style Stever is known for, Get-It-Done Guy's 9 Steps to Work Less and Do More will help you break the bad habits slowing you down and holding you back. A "New & Noteworthy" selection of The New York Times Book Review "Alexis Clark illuminates a

whole corner of unknown World War II history." —Walter Isaacson, New York Times bestselling author of Leonardo da Vinci "[A]n irresistible human story. . . . Clark's voice is engaging, and her tale universal." —Jon Meacham, Pulitzer Prize-winning author of Thomas Jefferson: The Art of Power and American Lion: Andrew Jackson in the White House A true and deeply moving narrative of forbidden love during World War II and a shocking, hidden history of race on the home front This is a love story like no other: Elinor Powell was an African American nurse in the U.S. military during World War II; Frederick Albert was a soldier in Hitler's army, captured by the Allies and shipped to a prisoner-of-war camp in the Arizona desert. Like most other black nurses, Elinor pulled a second-class assignment, in a dusty, sun-baked—and segregated—Western town. The army figured that the risk of fraternization between black nurses and white German POWs was almost nil. Brought together by unlikely circumstances in a racist world, Elinor and Frederick should have been bitter enemies; but instead, at the height of World War II, they fell in love. Their dramatic story was unearthed by journalist Alexis Clark, who through years of interviews and historical research has pieced together an astounding narrative of race and true love in the cauldron of war. Based on a New York Times story by Clark that drew national attention, *Enemies in Love* paints a tableau of dreams deferred and of love struggling to survive, twenty-five years before the Supreme Court's Loving decision legalizing mixed-race marriage—revealing the surprising possibilities for human connection during one of history's most violent conflicts.

"Who better to raise teens' awareness of mental illness and health than the YA authors they admire?" —Booklist (starred review) "[A] much-needed, enlightening book." —School Library Journal (starred review) Your favorite YA authors including Ellen Hopkins, Maureen Johnson, and more recount their own experiences with mental health in this raw, real, and powerful collection of essays that explores everything from ADD to PTSD. Have you ever felt like you just couldn't get out of bed? Not the occasional morning, but every day? Do you find yourself listening to a voice in your head that says "you're not good enough," "not good looking enough," "not thin enough," or "not smart enough"? Have you ever found yourself unable to do homework or pay attention in class unless everything is "just so" on your desk? Everyone has had days like that, but what if you have them every day? You're not alone. Millions of people are going through similar things. However issues around mental health still tend to be treated as something shrouded in shame or discussed in whispers. It's easier to have a broken bone—something tangible that can be "fixed"—than to have a mental illness, and easier to have a discussion about sex than it is to have one about mental health. *Life Inside My Mind* is an anthology of true-life events from writers of this generation, for this

generation. These essays tackle everything from neurodiversity to addiction to OCD to PTSD and much more. The goals of this book range from providing a home to those who are feeling alone, awareness to those who are witnessing a friend or family member struggle, and to open the floodgates to conversation.

A Nostalgic Novel Wiley-Blackwell

Written from the perspectives of both a user interface designer and a software engineer, this book demonstrates rather than just describes how to build technology that cooperates with people. It begins with a set of interaction design principles that apply to a broad range of technology, illustrating with examples from the Web, desktop software, cell phones, PDAs, cameras, voice menus, interactive TV, and more. It goes on to show how these principles are applied in practice during the development process -- when the ideal design can conflict with other engineering goals. The authors demonstrate how their team built a full-featured instant messenger application for the wireless Palm and PC. Through this realistic example, they describe the many subtle tradeoffs that arise between design and engineering goals. Through simulated conversations, they show how they came to understand each other's goals and constraints and found solutions that addressed both of their needs -- and ultimately the needs of users who just want their technology to work.

Human-Machine Shared Contexts considers the foundations, metrics, and applications of human-machine systems. Editors and authors debate whether machines, humans, and systems should speak only to each other, only to humans, or to both and how. The book establishes the meaning and operation of "shared contexts between humans and machines; it also explores how human-machine systems affect targeted audiences (researchers, machines, robots, users) and society, as well as future ecosystems composed of humans and machines. This book explores how user interventions may improve the context for autonomous machines operating in unfamiliar environments or when experiencing unanticipated events; how autonomous machines can be taught to explain contexts by reasoning, inferences, or causality, and decisions to humans relying on intuition; and for mutual context, how these machines may interdependently affect human awareness, teams and society, and how these "machines" may be affected in turn. In short, can context be mutually constructed and shared between machines and humans? The editors are interested in whether shared context follows when machines begin to think, or, like humans, develop subjective states that allow them to monitor and report on their interpretations of reality, forcing scientists to rethink the general model of human social behavior. If dependence on machine learning continues or grows, the public will also be interested in what happens to context shared by users, teams of humans and machines, or society when these machines malfunction. As scientists and engineers "think through this change in human terms," the ultimate goal is for AI to advance the performance of autonomous machines and teams of humans and machines for the betterment of society wherever these machines interact with humans or other machines. This book will be essential reading for professional, industrial, and military computer scientists and engineers; machine learning (ML) and artificial intelligence (AI) scientists and engineers, especially those engaged in research on autonomy, computational context, and human-machine shared contexts; advanced robotics scientists and engineers; scientists working with or interested in data issues for

autonomous systems such as with the use of scarce data for training and operations with and without user interventions; social psychologists, scientists and physical research scientists pursuing models of shared context; modelers of the internet of things (IOT); systems of systems scientists and engineers and economists; scientists and engineers working with agent-based models (ABMs); policy specialists concerned with the impact of AI and ML on society and civilization; network scientists and engineers; applied mathematicians (e.g., holon theory, information theory); computational linguists; and blockchain scientists and engineers. Discusses the foundations, metrics, and applications of human-machine systems Considers advances and challenges in the performance of autonomous machines and teams of humans Debates theoretical human-machine ecosystem models and what happens when machines malfunction

Voice over IP (VoIP) hit the headlines during the mid-1990's amid claims concerning its impact upon existing Switched Circuit telephony services. Whilst VoIP has clearly provided a focus for much debate within the telecommunications industry, there has been a clear gulf between hype and reality. This book examines VoIP as a technology and its consideration within the industry, the motivations for VoIP networks, a review of the status of the major components of a VoIP network and their development, and both current and emerging applications. This makes for essential reading for those with a technical or business interest in this rapidly developing area.

A Vision for Married and Single People The New Press

Modern culture would have you believe that everyone has a soul mate; that romance is the most important part of a successful marriage; that marriage does not mean 'til death do us part, but merely for as long as my needs are being met; and that when serious differences arise, divorce is the best solution. According to the Bible, all of these modern-day assumptions miss what marriage is all about. In this six-session video-based Bible study (DVD/digital video sold separately), Timothy Keller, along with Kathy, his wife of forty years, draws a profound portrait of marriage from the pages of Scripture that neither idealizes nor rejects the institution but points us back to the relationship between God and man. The result is a vision for marriage that is refreshingly frank and unsentimental, yet hopeful and beautiful. This study is for anyone from singles to couples considering marriage to those who have been married recently or for a long time. Sessions include: Service: Marriage Isn't about You Covenant: Created to Make Promises Roles: Loving through Mutual Submission Singleness: Strengthening the Spiritual Family Sex: The Act of Covenant Renewal Hope: Seeing the Great Horizon Designed for use with The Meaning of Marriage Video Study (sold separately).
