Prevalence of echinococcosis and Taenia hydatigena ... Prevalence Of Echinococcosis And TaeniaResults: The prevalence of echinococcosis was 22.2% and 16.6%, in goats and sheep, respectively, while the overall infection rates for cysticercosis were 61.1% in goats and 42.2% in sheep. The result of this study revealed that goats and sheep in Malambo slaughter slab had significantly higher prevalence of T. hydatigena (C. tenuicollis) and hydatid cysts ($p < 0.05$) compared to other slab points.Prevalence of Echinococcosis and Taenia hydatigena ...Therefore, with regard to the high prevalence of Echinococcus and Taenia spp. metacestodes infections found, it is strongly recommended that the current status of hydatidosis infection in humans is properly investigated in the study area and that a joint one health solution on the risks posed by tapeworm infection is adopted.Prevalence of echinococcosis and Taenia hydatigena ...A base-line survey of Echinococcus granulosus, Taenia hydatigena and T. ovis were undertaken in order to investigate the transmission dynamics of these parasites in northern Jordan. Intensity of E. granulosus infection, in sheep, increased with age in a linear fashion whilst the asymptotic prevalence was one. This implied that E. granulosus is in an endemic steady state with no evidence of ...Modelling the prevalence of Echinococcus and Taenia ...stages of Echinococcus spp. (hydatid cyst) and T. hydatigena (Cysticercus tenuicollis) through visual inspection, incision and palpation of organs and viscera. Results: The prevalence of echinococcosis was 22.2% and 16.6%, in goats and sheep, respectively, while the overall infection rates for cysticercosis were 61.1% in goats and 42.2% in sheep.Prevalence of echinococcosis and Taenia hydatigena ...Prevalence of echinococcosis and Taenia hydatigena cysticercosis in slaughtered small ruminants at the livestock-wildlife interface areas of Ngorongoro, Tanzania(PDF) Prevalence of echinococcosis and Taenia hydatigena ...Aim: Echinococcosis or hydatidosis (due to the larval stage of Echinococcus spp.) and cysticercosis (due to the larval stage of Taenia hydatigena) pose a significant economic losses due to slaughter condemnation and risk to public health in developing countries such as Tanzania where sanitation is poor and people live in close proximity with each other and with animals.[PDF] Prevalence of echinococcosis and Taenia hydatigena ...Results: The prevalence of echinococcosis was 22.2% and 16.6%, in goats and sheep, respectively, while the overall infection rates for cysticercosis were 61.1% in goats and 42.2% in sheep.
