Valve train systems
control the gas
exchange in a
combustion engine,
which means that they
represent a significant
opportunity for
optimizing the
combustion process.

Since they draw energy from the crankshaft, an efficient valve train contributes greatly to improving overall efficiency. The components of the valve train system are subjected to high loads. In addition to wear due to mechanical forces increasing combustion pressures and temperatures, in particular, place greater demands on the materials and heat dissipation of components on the combustion side. This technical book clearly and thoroughly presents a holistic understanding of the valve train system.

This successful text puts personality back into the personality course, integrating the classic insights of the personality theorists with modern research in a manner that will fascinate and captivate students. Organized around eight basic aspects of personality-psychoanalytic, ego, biological, behaviorist, cognitive, trait, humanistic, and situational/interactionist-the text both explains the classic theories and also explores how the information applies to the student reader. The text presents a balanced, critical, yet

optimistic approach. Personality encourages critical thinking about human nature. While holding the highest scientific standards, the text uses unique and provocative pedagogical devices (see below) to capture students' interest and bring the field of personality to life. It has been hailed as the best-written and most relevant personality textbook in the field.

Electric Machinery and Transformers Oxford University Press

For this revision of their bestselling junior- and senior-level text, Guru and Hizioglu have incorporated eleven years of cutting-edge developments in the field since *Electric Machinery and Transformers* was first published. Completely

re-written, the new Second Edition also incorporates suggestions from students and instructors who have used the First Edition, making it the best text available for junior- and senior-level courses in electric machines. The new edition features a wealth of new and improved problems and examples, designed to complement the authors' overall goal of encouraging intuitive reasoning rather than rote memorization of material. Chapter 3, which presents the conversion of energy, now includes: analysis of magnetically coupled coils, induced emf in a coil rotating in a uniform magnetic field, induced emf in a coil rotating in a time-varying magnetic field,

and the concept of the revolving field. All problems and examples have been rigorously tested using Mathcad.

Contemporary Perspectives Oxford University Press, USA
In the spring of 1949, Stella O'Riain flees her home – a sheep property on the barren edge of the Strzelecki Desert. She leaves behind the graves of her husband Joe and her baby daughter. With no money and limited options, Stella accepts her brother-in-law Harry's offer to live at the O'Riain cane

farm in the Richmond Valley. There she hopes to get answers to the questions that plague her about her marriage. However Harry refuses to discuss Joe or the family's secrets, even forbidding her to speak to the owner of the neighbouring property. Nearly a century earlier in County Tipperary, Irish cousins Brandon and Sean O'Riain also fled their homes – as wanted criminals. By 1867, they are working as cedar-cutters in New South Wales's lush green Richmond Valley. But while Brandon embraces the opportunities this new country offers, Sean refuses to let go of the past. And one cousin is about to make a dangerous choice that will have devastating consequences down

the generations . . .
