Synopsis of Vocal Musick, by the unidentified A.B., was published in London in 1680 and appears to have only ever had one edition. Its relatively

short shelf-life belies its importance to the history of early British music theory. Unlike other English theoretical writings of the period, the Synopsis derives many of its aspects from the continental theoretical tradition, including the first references in English theory to the modern fractional time signatures that had been invented in Italy in the mid-seventeenth century, the first references in English to compound time and the first explanations of tempo terms such as Adagio and Presto. In these respects the treatise forms an important link between English and continental

theoretical traditions and may have encouraged the adoption of Italian principles which became a common feature of English writings by the early eighteenth century. The treatise is essentially in two parts. The first section of the book comprises rudimentary instruction on understanding notation and intervals, descriptions of common vocal ornaments and instruction in the process of learning to sing. The second part consists of a selection of psalms, songs and catches which are provided as exercises for the singer, though several of them require a reasonably advanced degree of skill. These pieces provide valuable insight into the way both sacred and secular music might have been performed by amateur musicians in the Restoration period. They include 14 rare

English madrigal settings by the Italian composer Gastoldi - further evidence of the Italian influence which pervades the text. This is the first modern edition of the Synopsis, and indeed the first edition to appear since its original publication.

For several decades, Scott Burnham has sought to bring a ready ear and plenty of humanistic warmth to musicological inquiry. *Sounding Values* features eighteen of his essays on mainstream Western music, music theory, aesthetics and criticism. In these writings, Burnham listens for the values-aesthetic, ethical, intellectual-of those who have created

influential discourse about music, while also listening for the values of the music for which that discourse has been generated. The first half of the volume confronts pressing issues of historical theory and aesthetics, including intellectual models of tonal theory, leading concepts of sonata form, translations of music into poetic meaning, and recent rifts and rapprochements between criticism and analysis. The essays in the second half can be read as a series of critical appreciations, engaging some of the most consequential reception tropes of the past two centuries: Haydn and humor, Mozart and beauty, Beethoven and the sublime, Schubert and memory.

With their insistence that form is a dialectical process in the music of Beethoven, Theodor Adorno and Carl Dahlhaus emerge as the guardians of a long-standing critical tradition in which Hegelian concepts have been brought to bear on the question of musical form. Janet Schmalfeldt's ground-breaking account of the development of this

Beethoven-Hegelian tradition restores to the term "form" some of its philosophical associations in the early nineteenth century, when profound cultural changes were yielding new relationships between composers and their listeners, and when music itself-in particular, instrumental music-became a topic for renewed philosophical investigation. Precedents for Adorno's and Dahlhaus's concept of form as process arise in the Athenäum Fragments of Friedrich Schlegel and in the Encyclopaedia Logic of Hegel. The metaphor common to all these sources is the notion of becoming; it is the idea of form coming into being that this study explores in respect to music by Beethoven, Schubert, Mendelssohn, Chopin, and Schumann. A critical assessment of Dahlhaus's preoccupation

with the opening of Beethoven's "Tempest" Sonata serves as the author's starting point for the translation of philosophical ideas into music-analytical terms-ones that encourage listening "both forward and backward," as Adorno has recommended. Thanks to the ever-growing familiarity of late eighteenth-century audiences with formal conventions, composers could increasingly trust that performers and listeners would be responsive to striking formal transformations. The author's analytic method strives to capture the dynamic, quasi-narrative nature of such transformations, rather than only their end results. This experiential approach to the perception of form invites listeners and especially performers to participate in the interpretation of

processes by which, for example, a brooding introduction-like opening must inevitably become the essential main theme in Schubert's Sonata, Op. 42, or in which tremendous formal expansions in movements by Mendelssohn offer a dazzling opportunity for multiple retrospective reinterpretations. Above all, *In the Process of Becoming* proposes new ways of hearing beloved works of the romantic generation as representative of their striving for novel, intensely self-reflective modes of communication.

The Polish composer Karol Szymanowski is one of the most fascinating musical figures of the early twentieth century. His works included four symphonies, two violin concertos, the operas *Hagith* and *King Roger*, the ballet-pantomime *Harnasie*, the oratorio *Stabat Mater*, as well as numerous piano, violin, vocal and choral compositions. The profile and popularity of Szymanowski's music outside Poland has never been higher and continues to grow. The *Szymanowski Companion* constitutes the most significant and comprehensive reference source to the composer in English. Edited by two of the leading scholars in the field, Paul Cadrin and

Stephen Downes, the collection consists of over 50 contributions from an international array of contributors, including recognized Polish experts. The Companion thus provides a systematic, authoritative and up-to-date compilation of information concerning the composer's life, thought and works.

This book presents a deep spectrum of musical, mathematical, physical, and philosophical perspectives that have emerged in this field at the intersection of music and mathematics. In particular the contributed chapters introduce advanced techniques and concepts from modern mathematics and physics,

deriving from successes in domains such as Topos theory and physical string theory. The authors include many of the leading researchers in this domain, and the book will be of value to researchers working in computational music, particularly in the areas of counterpoint, gesture, and Topos theory.

Basic Music Theory By Joe Procopio

Questions about variation, similarity, enumeration, and classification of musical structures have long intrigued both musicians and mathematicians. Mathematical models can be found from theoretical analysis to actual composition or sound production.

Increasingly in the last few decades, musical scholarship has incorporated modern mathematical content. One example is the application of methods from Algebraic Combinatorics, or Topology and Graph Theory, to the classification of different musical objects. However, these applications of mathematics in the understanding of music have also led to interesting open problems in mathematics itself. The reach and depth of the contributions on mathematical music theory presented in this volume is significant. Each contribution is in a section within these subjects: (i) Algebraic and Combinatorial Approaches; (ii) Geometric, Topological, and Graph-Theoretical Approaches; and (iii) Distance and Similarity Measures in Music. remove

Essays in diatonic set theory, transformation theory, and neo-Riemannian theory -- the newest and most exciting fields in music theory today. The essays in Music Theory and Mathematics: Chords, Collections, and Transformations define the state of mathematically oriented music theory at the beginning of the twenty-first century. The volume includes essays in diatonic set theory, transformation theory, and neo-Riemannian theory -- the newest and most exciting fields in music theory today. The essays constitute a close-knit body of work -- a family in the sense of tracing their descent from a few key

breakthroughs by John Clough, David Lewin, and Richard Cohn in the 1980s and 1990s. They are integrated by the ongoing dialogue they conduct with one another. The editors are Jack Douthett, a mathematician and music theorist who collaborated extensively with Clough; Martha M. Hyde, a distinguished scholar of twentieth-century music; and Charles J. Smith, a specialist in tonal theory. The contributors are all prominent scholars, teaching at institutions such as Harvard, Yale, Indiana University, and the University at Buffalo. Six of them (Clampitt, Clough, Cohn, Douthett, Hook, and Smith) have received the Society for Music Theory's prestigious Publication Award, and one (Hyde) has received the ASCAP Deems Taylor Award. The collection includes the last

paper written by Clough before his death, as well as the last paper written by David Lewin, an important music theorist also recently deceased.

Contributors: David Clampitt, John Clough, Richard Cohn, Jack Douthett, Nora Engebretsen, Julian Hook, Martha Hyde, Timothy Johnson, Jon Kochavi, David Lewin, Charles J. Smith, and Stephen Soderberg.
