Recent studies

have
 highlighted
 that epithelial-
 mesenchymal
 transition
 (EMT) is not

only about cell migration and invasion, but it can also govern many other important elements such as immunosuppression, metabolic reprogramming, senescence-associated secretory phenotype (SASP), stem cell properties, therapy resistance, and tumor microenvironment interactions. With the ongoing debate about the requirement of EMT for

cancer metastasis, an emerging focus on intermediate states of EMT and its reverse process mesenchymal-epithelial transition (MET) offer new ideas for metastatic requirements and the dynamics of EMT/MET during the entire metastatic cascade. Therefore, we would like to initiate discussions on viewing EMT and its downstream signaling networks as a

fulcrum of cellular plasticity, and a facilitator of the adaptive responses of cancer cells to distant organ microenvironments and various therapeutic assaults. We hereby invite scientists who have prominently contributed to this field, and whose valuable insights have led to the appreciation of epithelial-mesenchymal plasticity as a more comprehensive mediator of the adaptive response of

cancer cells, with huge implications in metastasis, drug resistance, tumor relapse, and patient survival.

The book provides detailed information on breast cancer and covers all the aspects of this rapidly spreading disease, such as applied anatomy and physiology, causative factors, various Investigations

to reach a concise, definitive and complete diagnosis. The management of breast cancer involves multi-modality treatment and the book describes all the modalities in a very clear manner. It also discusses in a very lucid and practical way. the multi-prong treatment that the patient requires . Additionally, the book covers lesser-known areas of the subject like rehabilitation, management

of lymphoedema , Extravasation of chemo-Infusion, organization of breast cancer management group, breast cancer awareness and patient education, follow up of the patient, and psychological support to these patients who have undergone mutilation of their organ. Edited by experts the chapters are contributed by renowned onco-surgeons from high

<p>volume and reputed centers in India such as, PGIMER, Chandigarh, AIIMS, New Delhi, and TMH, Mumbai among others. The book serves as a useful resource for surgeons, medical oncologists, radiotherapists, pathologists, radiologists and many other specialists interested in the field of breast cancer and actively working in this area. It is useful for practitioners</p>	<p>and residents as well as for those who want to learn the different aspects of this disease. <i>Current Practices in Academic Librarianship</i> Edward Elgar Publishing The book covers a wide variety of themes, with good number of practical papers such as Library Automation, Digitization. Data Mining & Data Warehousing, Cloud Computing, Management of e-Journals & e-Resources, Strategic</p>	<p>Management and Stress Management. It is hoped that the present work, <i>Current Practices in Academic Librarianship</i>, will have practical application and find wider audience not only among the academic librarians but also by a large number of enthusiastic and upcoming LIS professionals associated with all types of libraries. It is a guiding manual with regard to current practices in</p>

LIS field. **Handbook on Frugal Innovation** Elsevier Health Sciences One of every four deaths occurring in the United States today is due to cancer, and the number of diagnoses continues to increase. Fortunately, however, cancer treatments are improving, which means more and more patients are surviving for longer periods. Complementary methods have played an important role in these treatments, showing benefits such as a higher quality of life, reduced instance and severity of the side effects of standard therapy, and a general improvement of the patient's immunological state. Indeed, these methods - from carefully monitored nutrition, exercise, and psychological support to enzyme substitution, phytotherapy, hyperthermia and microbiology therapy - are critical to a treatment's overall success. More than ever, doctors need accurate, up-to-date information about which methods have been proven in scientifically based clinical studies (EBM) to be acceptable for use in conjunction with standard treatment methods. In this unique book, experts ranging across medical disciplines present data on the efficacy of these

methods as they are currently being used, the necessary scientific background, and practical advice for introducing them into practice. With illustrations, tables, and detailed descriptions, this book is an ideal reference and an invaluable tool for educating patients about this encouraging aspect of cancer therapy. Throughout, the contributors emphasize the

latest scientifically and clinically tested treatments. A useful chart lays out in detail which treatments are applicable for various types of cancers and what effects they have been shown to cause. The word is out about the beneficial qualities of complementary therapies in the treatment of cancer. More physicians are offering it to their patients, and more and more patients are

demanding it. You - and your patients - cannot afford to be without this valuable resource. *Breast Cancer* Springer Nature This open access book addresses the multiple health dimensions posed by the COVID-19 pandemic in India and other countries including nine in Asia, five in Sub-Saharan Africa, and New Zealand. It explores the impact of the pandemic on mental health, sexual and

reproductive health and rights, health financing, self-care, and vaccine development and distribution. The contributing authors discuss its impact on vulnerable populations, including interstate migrants and female sex workers. The significant role of media and communications, rapid dissemination of information in social media, and its impact during the COVID-19 pandemic era

are discussed. It closes with lessons learned from the experiences of countries that have contained the pandemic. With contributions from experts from around the world, this book presents solutions of problems that relate to COVID-19. It is a valuable resource appealing to a wide readership across the social sciences and the humanities. Readers include

governments, academicians, researchers, policy-makers, program implementers, as well as lay persons.

Textbook of Hospital Administration

Bentham Science Publishers This open access book describes strategies and experiences of highly skilled professionals in improving oncology care worldwide. The book is structured into three main sections with

several chapters each, reflecting the authors' individual, real-life experiences. It explores ways to improve oncology education and scientific training, how to set up and run a clinical research facility ethically and efficiently in low- and middle-income settings, addressing the challenges that the workforce encounters in the real world. The main challenges of today's oncologists

seem to be the ever-growing patient care and administrative workload and the risk of burn-out. What are the best strategies to maintain a healthy work-life for the benefit of the patients, the physicians and society, taking into account the different needs, depending on factors like peace, social and gender equality? This book addresses oncologists all over the world

and their allies throughout the associated industries to highlight the importance of shared and sustainable education, clinical research and global cancer care.

This work ushers in a change in the approach of books on hospital administration . To make the text interesting authors have used the case based learning approach.

Apart from this many new topics have been introduced in this book which had not been addressed so far in the available books. For example:- due importance has been given to the role of engineering department in ensuring provision of good quality of medical care by the hospitals. New concepts in hospital administration like information therapy, use of information

and communication technology, health promoting hospital approach, impact of globalization on hospital care etc. have also introduced through this book. USP of the book is giving due importance to the feedback from experienced hospital administrators across public and private hospitals of country. This book will surely be of use to medical superintendents and hospital

<p>administrators in government and private hospitals in India and other countries. Students as well as teachers of various courses namely, regular and distant learning courses of MBA in Health Care/Hospital Administration , Diploma of masters in Hospital Administrator, MD in hospital administrator , MD in community medicine, Diploma/masters in laws, master's in</p>	<p>public health will also find this book of immense value. This book will also be helpful for civil surgeons and senior medical officers of state health services. The book comprehensively consolidates a lot of practical aspects by incorporating plenty of illustrations, photographs, case studies, real life situations etc. which will help the readers to get a realistic practical experience. research branch of the World Health Organization. Most of these projects involve collaborations with scientists in institutes throughout the world, covering topics ranging from descriptive epidemiology and biostatistics, cancer registration and analysis of data on cancer occurrence, to basic research on genetic and molecular aspects of cancer development to

pathogenesis and prevention studies. Profusely illustrated, the Report also contains details of the personnel and organization of IARC and its activities, as well as a complete list of over 500 publications and articles authored by its scientists and their collaborators during the biennium.

cancer of the

<p>esophagus is among the most difficult to manage. Although it has fairly typical presenting clinical features in the form of an elderly patient with dysphagia; the subsequent investigations have to be fine-tuned to select which patient should undergo esophageal resection (a formidable procedure which carries a high mortality risk and is associated with serious</p>	<p>complications) , who should undergo neoadjuvant therapy and who should only be palliated with stents or chemoradiotherapy. In recent years this fine-tuning has become much more precise with many patients being saved from harmful explorations of the chest and abdomen only to encounter widespread disease and at the same time many who have large, locally invasive</p>	<p>tumors which were thought to be unresectable being given neoadjuvant chemotherapy and subsequently being able, sometimes, to undergo curative esophagectomy. Possibly because of these improvements in diagnosis and multimodality treatment, the 5-year survival of patients with esophageal cancer that has been resected has improved from a dismal 5%, 15 years ago</p>

to a more respectable 25% now. In this book, authors, two thirds of whom are from the Memorial Sloan-Kettering Cancer Center (MSKCC) in New York, have evaluated the published evidence on different aspects of the management of patients with esophageal cancer as well as made recommendations from their own experience with the disease. Thus,

we have chapters on diagnostic and therapeutic endoscopy, staging, perioperative therapy, operative treatment (transhiatal, radical, Ivor Lewis and the minimally invasive approaches) and postoperative complications. Finally there is a chapter discussing the epidemiology and difficulties in the management of patients with esophageal cancer in India where the disease is

common and mainly affects poor people who cannot afford expensive treatment. The author mainly discusses the experience of the Tata Memorial Hospital in Mumbai where every year 1200 patients are seen with the disease and 180 undergo surgery. This is amongst the largest experience of the treatment of patients with esophageal cancer worldwide. All the subjects

and authors have been brought together for this volume by the Editor, Manjit Singh Bains, who is a Professor of Clinical Cardiothoracic Surgery at the Cornell Weill Medical College in New York as well as an Attending Thoracic Surgeon at the MSKCC. **Oncology, 1970: Diagnosis and management of cancer: general considerations** Springer Nature This

the world. Edited by world-renowned practising oncologists and written by key opinion leaders, this book contains authoritative and up-to-date information on cancer detection, diagnosis and treatment alongside topics such as survivorship, special populations and palliative care. Remodelled and revised for the ninth edition to provide practical information to

oncology workers, the UICC Manual of Clinical Oncology is structured in two parts. Part 1 covers general principles of cancer diagnosis and management with additional attention to special settings in oncology, including supportive care and survivorship, and Part 2 covers site-specific multidisciplinary cancer management. The edition includes up-to-date summaries of

all treatment modalities (medical, surgical and radiation) for all tumour sites. It also contains the latest TNM classifications outlined in the TNM Classification of Malignant Tumours. in biotechnology, and practical applications of research in agriculture, medicine, forensics, industry are discussed. Annual Report of the Department of Atomic Energy, Government of India World Health Organization This handbook, written in a clear and precise style, describes the principles of positron emission tomography (PET) and provides detailed

information on its application in clinical practice. The first part of the book explains the physical and biochemical basis for PET and covers such topics as instrumentation, image reconstruction, and the production and diagnostic properties of radiopharmaceuticals. The focus then turns to the use of PET in clinical practice, including its role in hybrid imaging (PET-CT). A wide range of oncological

applications in different body systems and organs are discussed, and uses of PET in cardiology, neurology, and psychiatry are also addressed. Characteristic findings are described and illustrated by numerous images, many of them in color. This book will be of value not only for nuclear medicine physicians and radiologists but also for oncologists, surgeons, cardiologists, neurologists, psychiatrists,

and residents with an interest in molecular imaging.
