PRATT ANTONIO

Places, Paths and Monuments Routledge
Over the past three decades, "landscape" has become an umbrella term to describe many different strands of archaeology. From the processualist study of settlement patterns to the phenomenologist's experience of the natural world, from human impact on past environments to the environment's impact on human thought, action, and interaction, the term has been used. In this volume, for the first time, over 80 archaeologists from three continents attempt a comprehensive definition of the ideas and practices of landscape archaeology, covering the theoretical and the practical, the research and conservation, and encasing the term in a global framework. As a basic reference volume for landscape archaeology, this volume will be the benchmark for decades to come. All royalties on this Handbook are donated to the World Archaeological Congress.

A Phenomenological Approach to the Study of

Minoan Architecture SUNY Press

This book takes a new approach to writing about the past. Instead of studying the prehistory of Britain from Mesolithic to Iron Age times in terms of periods or artifact classifications, Tilley examines it through the lens of their geology and landscapes, asserting the fundamental significance of the bones of the land in the process of human occupation over the long durée. Granite uplands, rolling chalk downlands, sandstone moorlands, and pebbled hilltops each create their own potentialities and symbolic resources for human settlement and require forms of social engagement. Taking his findings from years of phenomenological fieldwork experiencing different landscapes with all senses and from many angles, Tilley creates a saturated and historically imaginative account of the landscapes of southern England and the people who inhabited them. This work is also a key theoretical statement about the importance of landscapes for human settlement.

Towards a Phenomenology of Person and World Routledge

Bringing together literary and cultural studies scholars, historians, artists and creative writers, this collection examines the different ways in which human beings respond to, debate and interact with landscape. While the essays most often begin with the broadly literary - the memoir, the travelogue, the novel, poetry - the contributors approach the topic in diverse and innovative ways. Taken together, the essays interrogate important issues about how we live now and might live in the future.

Of Rocks and Water JHU Press

The only compact yet comprehensive survey of environmental and cultural forces that have shaped the visual character and geographical diversity of the settled American landscape. The book examines the large-scale historical influences that have molded the varied human adaptation of the continent's physical topography to its needs over more than 500 years. It presents a synoptic view of myriad historical processes working together or in conflict, and illustrates them through their survival in or

disappearance from the everyday landscapes of today.

In The Cave 3 Copper

Scroll: A Symbolic

Journey, Jesper

Høgenhavn presents a reading presents of the Copper Scroll as a literary composition, with a deliberately designed structure, composed to cope with turbulent circumstances during the 1st century CE.

Routledge

Anthropolgy and Archaeology provides a valuable and much-needed introduction to the theories and methods of these two inter-related subjects. This volume covers the historical relationship and contemporary interests of archaeology and anthropology. It takes a

broad historical approach, setting the early history of the disciplines with the colonial period during which the Europeans encountered and attempted to make sense of many other peoples. It shows how the subjects are linked through their interest in kinship, economics and symbolism, and discusses what each contribute to debates about gender, material culture and globalism in the post-colonial world.

Affective Landscapes in Literature, Art and Everyday Life Routledge

This book provides a general self-reflexive review and critical analysis of Scandinavian rock art from the standpoint of Chris Tilley's research in this area over the last thirty years. It offers a novel alternative theoretical perspective stressing the significance of visual narrative structure and rhythm, using musical analogies, putting particular emphasis on the embodied perception of images in a landscape context. Part I reviews the major theories and interpretative perspectives put forward to understand the images, in historical perspective, and provides a critique

discussing each of the main types of motifs occurring on the rocks. Part II outlines an innovative theoretical and methodological perspective for their study stressing sequence and relationality in bodily movement from rock to rock. Part III is a detailed case study and analysis of a series of rocks from northern Bohuslän in western Sweden. The conclusions reflect on the theoretical and methodological approach being taken in relation to the disciplinary practices involved in rock art research, and its future.

Geologies, Topographies, Identities; Explorations in Landscape

Phenomenology 3 Ohio University Press

Long before astronomy was a science, humans used the stars to mark time, navigate, organize planting and dramatize myths. This encyclopaedia draws on archaeological evidence and oral traditions to reveal how prehistoric humans perceived the skies and celestial phenomena. *Structuralism, Hermeneutics and Post-Structuralism* UNM Press Provides a descriptive treatment of varieties of human memory, including

recognising and reminding, reminiscing and commemorating, body memory and place memory. Bringing to light forgotten aspects of human memory - everyday occurrences as well as unusual instances - this study demonstrates that nothing in our lives is unaffected by remembering.

Experiencing Mobility in Ho Chi Minh City
Routledge

From ancient Egyptian royal cemeteries to great 18th-century English estates and the earth works of today, this volume spans the history of landscape design, revealing a great deal about the development of societies, and how cities, parks and gardens embody cultural values.

Another Way of Telling
Routledge

The book delves into the affective, embodied, and sensory dimensions of traffic and urban mobility. It brings together key phenomenological and post-phenomenological readings to challenge taken for granted assumptions of urban traffic. Through the experiences of traffic users in Ho Chi Minh City, Vietnam, the book provides fascinating pathways into structures

and processes that make up phenomenal traffic worlds. It explores the nature of the traffic experience, modalities of existence within it, and the wide spectrum of awarenesses involved in making sense from non-sense. The book offers rich theoretical insights on how we feel our way through our affect-laden worlds. Through empirical examples from the urban traffic in Ho Chi Minh City, the book explores this fluid, constantly changing complex collective of ongoing negotiations we call 'traffic,' often emotional, involving and producing all kinds of entities. It develops a range of philosophical concepts in order to better understand the complex relationships between humans and non-humans in everyday settings. Offering innovative insights into the structures, authorities, materialities and forms of power that shape our experiences of traffic, this book will be of interest to students, scholars and practitioners interested in philosophy, cultural geography, mobilities, transport studies, cultural studies, and urban studies.

A Dictionary of Archaeology Routledge

Chris Tilley offers a kinaesthetic approach to understanding ancient landscapes, one that uses the full body and all the senses, through examples of rock art and megalithic architecture in Norway, Ireland, and Sweden.

The Making of the American Landscape
Oxbow Books

This volume focuses on the question of how people might see and understand the natural and built environments in a deeper, more perceptive way. Why are places important to people, and can designers and policy-makers create better places? Contributors include architects, philosophers and architects.

The Materiality of Stone
UCL Press

themes among the essays resurface and resonate. Though our request for essays was broad and open-ended, we found that topics such as seeing, authenticity, interpretation, wholeness, care, and dwelling ran as undercurrents throughout. Our major hope is that each essay plays a part in revealing a larger whole of meaning which says much about a more humane relationship with places, environments and the

earth as our home. Part I. Beginnings and directions At the start, we recognize the tremendous debt this volume owes to philosopher Martin Heidegger (1890-1976), whose ontological excavations into the nature of human existence and meaning provide the philosophical foundations for many of the essays, particularly those in Part I of the volume. Above all else, Heidegger was regarded by his students and colleagues as a master teacher. He not only thought deeply but was also able to show others how to think and to question. Since he, perhaps more than anyone else in this century, provides the instruction for doing a phenomenology and hermeneutic of humanity's existential situation, he is seminal for phenomenological and hermeneutical research in the environmental disciplines. He presents in his writings what conventional scholarly work, especially the scientific approach, lacks; he helps us to evoke and understand things through a method that allows them to come forth as they are; he provides a new way to speak about

and care for our human nature and environment.

Interpreting Landscapes Wiley-Blackwell

Looks at how teenagers in one small town use spaces and give value and meaning to specific places.

Interpreting the Landscape Oxbow Books The archaeology of space and place is examined in this selection of papers from the 34th annual Chacmool Archaeological Conference.

A Cultural and Architectural History

Routledge An Anthropology of Landscape tells the fascinating story of a heathland landscape in south-west England and the way different individuals and groups engage with it. Based on a long-term anthropological study, the book emphasises four individual themes: embodied identities, the landscape as a sensuous material form that is acted upon and in turn acts on people, the landscape as contested, and its relation to emotion. The landscape is discussed in relation to these themes as both 'taskscape' and 'leisurescape', and from the perspective of

different user groups. First, those who manage the landscape and use it for work: conservationists, environmentalists, archaeologists, the Royal Marines, and quarrying interests. Second, those who use it in their leisure time: cyclists and horse riders, model aircraft flyers, walkers, people who fish there, and artists who are inspired by it. The book makes an innovative contribution to landscape studies and will appeal to all those interested in nature conservation, historic preservation, the politics of nature, the politics of identity, and an anthropology of Britain. The Memory of Place Bloomsbury Academic This collection of essays explores the history, implications, and usefulness of phenomenology for the study of real and virtual places. While the influence of phenomenology on architecture and urban design has been widely acknowledged, its effect on the design of virtual places and environments has yet to be exposed to critical reflection. These essays from philosophers, cultural geographers, designers, architects, and archaeologists advance

the connection between phenomenology and the study of place. The book features historical interpretations on this topic, as well as context-specific and place-centric

applications that will appeal to a wide range of scholars across disciplinary boundaries. The ultimate aim of this book is to provide more helpful and precise definitions of

phenomenology that shed light on its growth as a philosophical framework and on its development in other disciplines concerned with the experience of place.
