This book presents perspectives on the knowledge creation metaphor of learning, and elaborates the triological approach to learning. The knowledge creation metaphor differs from both the acquisition and the participation metaphors. In a nutshell triological approaches seek to engage learners in joint work with shared objects and artefacts mediated by collaboration technology. The theoretical underpinnings stem from different origins, including Bereiter and Scardamalia's theory on knowledge building and Engeström's activity theory. The authors in this collection introduce key concepts and techniques, explain tools designed and developed to support knowledge creation, and report results from case studies in specific contexts. The book chapters integrate theoretical, methodological, empirical and technological research, to elaborate the empirical findings and to explain the design of the knowledge creation tools. The target audiences for this book are researchers, teachers and Human Resource developers interested in new perspectives on collaborative learning, technology-mediated knowledge creation, and applications of this in their own settings, for higher education, teacher training and workplace learning. The book is the result of joint efforts from many contributors who took part in the Knowledge-practices Laboratory (KP-Lab) project (2006-2011) supported by EU FP6.

'Philippe Baumard has observed that strategic success seems to lie more in top managers' ability to use tacit knowledge than in their gaining or updating explicit knowledge' - William H Starbuck, New York University 'This important new book effectively illustrates how, in conditions of ambiguity, managers 'over-manage', i.e. rely too much on explicit plans and interpretations. Here, Philippe Baumard develops an alternative analysis and with it a new approach to management' - Frank Blackler, Lancaster University This landmark book delves below the surface of organizations in order to understand the complex processes of top managers' decision making. This volume offers a simple, systematic guide to creating a knowledge sharing practice in your organization. It shows how to build the enabling environment and develop the skills needed to capture and share knowledge gained from operational experiences to improve performance and scale-up successes. Its recommendations are grounded on the insights gained from the past seven

years of collaboration between the World Bank and its clients around the world—ministries and national agencies operating in various sectors—who are working to strengthen their operations through robust knowledge sharing. While informed by the academic literature on knowledge management and organizational learning, this handbook's operational background and many real-world examples and tips provide a missing, practical foundation for public sector officials in developing countries and for development practitioners. However, though written with a public sector audience in mind, the overall concepts and approaches will also hold true for most organizations in the private sector and the developed world.

You know what XP is, how to get it up and running, and how to plan projects using it. Now it's time to expand your use of Extreme Programming and learn the best practices of this popular discipline. In "Extreme Programming Explored," you can read about best practices as learned from the concrete experience of successful XP developers. Author and programmer Bill Wake provides answers to practical questions about XP implementation. Using hands-on examples—including code samples written in the Java programming language—this book demonstrates the day-to-day mechanics of working on an XP team and shows well-defined methods for carrying out a successful XP project. The book is divided into three parts: Part 1, Programming—programming incrementally, test-first, and refactoring. Part 2, Team Practices—code ownership, integration, overtime, and pair programming; how XP approaches system architecture; and how a system metaphor shapes a common vision, a shared vocabulary, and the architecture. Part 3, Processes—how to write stories to plan a release; how to plan iterations; and the activities in a typical day for the customer, the programmer, and the manager of an XP project. To demonstrate how an XP team uses frequent testing, you'll learn how to develop the core of a library search system by unit testing in small increments. To show how to make code ready for major design changes, the author teaches you how to refactor a Java program that generates a Web page. To see how a system metaphor influences the shape of a system, you'll learn about the effects of different metaphors on customer service and word processing applications. To show how customers and programmers participate in release planning, the book demonstrates writing and estimating stories, and shows how the customer plans a release.

This book brings together the research of a number of scholars in the field of knowledge creation and imparts a sense of order to the field. The chapters share three characteristics: they are all grounded in extensive qualitative and/or quantitative research; they all go beyond the mere description of the knowledge-creation process and offer both theoretical and strategic implications; they share a view of knowledge creation and knowledge transfer as delicate processes, necessitating particular forms of support from managers.

Knowledge Management (KM) is the art and science of utilizing knowledge as the most important resource towards gaining competitive advantage in today's business environment. Despite the huge and growing interest in KM, there has been no serious attempt to bridge theory and practice, the practices of East and West, the soft side (organizational capabilities) with the hard side (information technology), or the practices of large companies with start-ups. Until now. Written by the Dean of Hitotsubashi Business School in Tokyo, the world's leading centre of KM, and featuring contributions from thought leaders around the world, this book will provide a synthesis towards the emerging field

of KM. It brings together the latest trends in the field and re-ignites the debate on the future form of knowledge management.

To explain how this is done - and illuminate Japanese business practices as they do so - the authors range from Greek philosophy to Zen Buddhism, from classical economists to modern management gurus, illustrating the theory of organizational knowledge creation with case studies drawn from such firms as Honda, Canon, Matsushita, NEC, Nissan, 3M, GE, and even the U.S. Marines. In addition, the authors show that, to create knowledge, the best management style is neither top-down nor bottom-up, but rather what they call "middle-up-down," in which the middle managers form a bridge between the ideals of top management and the chaotic realities of the frontline.

A frequent complaint in literature is that services have been previously largely overlooked by innovation researchers and technology policy makers. Given the unarguable growth in the importance of the service sectors, increasing numbers of researchers and policy makers have taken a fresh look at service activities. *Innovation Systems in the Service Economy: Measurement and Case Study Analysis* presents contributions which increase the understanding of the role of services in the development of the division of labor in modern economics. This volume is devoted to the elaboration and understanding of the following two themes. First, service firms can be innovative in their own right, even though the process of innovation and the kinds of innovation may be different from those traditionally associated with manufacturing and other primary activities. Second, service firms and associated activities play an important role in the evolving division of creative labor which is constituted by modern innovative systems.

This influential book establishes the enduring vocabulary and concepts in the burgeoning field of knowledge management. It serves as the hands-on resource of choice for companies that recognize knowledge as the only sustainable source of competitive advantage going forward. Drawing from their work with more than thirty knowledge-rich firms, Davenport and Prusak—experienced consultants with a track record of success—examine how all types of companies can effectively understand, analyze, measure, and manage their intellectual assets, turning corporate wisdom into market value. They categorize knowledge work into four sequential activities—accessing, generating, embedding, and transferring—and look at the key skills, techniques, and processes of each. While they present a practical approach to cataloging and storing knowledge so that employees can easily leverage it throughout the firm, the authors caution readers on the limits of communications and information technology in managing intellectual capital.
