Ensuring a coordinated response to highway crashes and other incidents is vital to protecting public safety, keeping traffic moving, and reducing environmental impacts. The TRB National Cooperative Highway Research Program's NCHRP Research Report 981: Guidelines for Quantifying Benefits of Traffic Incident Management Strategies aims to offer guidance on Traffic Incident Management (TIM) programs, which can vary widely and may have different goals, guidelines, and methods applicable under a variety of data scenarios. Supplemental to the report is NCHRP Web-Only Document 301: Development of Guidelines on Quantifying Benefits of Traffic Incident Management Strategies, an Implementation Plan, and a Summary Presentation.

Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

Countries undergoing major social and legal transitions typically experience a light, but relatively insignificant, increase in crime. However, in the past decade, many transitional countries in Eastern Europe, and Russia in particular, have experienced a surge in criminal activities that came about through the collaboration of diverse players—such as criminals, state officials, businesspersons, and law enforcement—into organized networks aimed to obtain financial and economic gains.

The Integrated Product and Process Design and Development (IP2D2) method is quickly becoming the new standard for the rapid creation of competitively priced, high-quality products. IP2D2 indicates, in the broadest sense, the overlapping, interacting, and iterative nature of all of the aspects of the product realization process. The method is a continuous process whereby a product's cost, performance and features, value, and time-to-market lead to a company's increased profitability and market share. This new text/reference reflects the sweeping changes this approach has brought to traditional engineering design courses and to industry. Carefully organized, with sections on each major stage of the approach, Integrated Product and Process Design and Development: The Product Realization Process is the first complete treatment of this new direction in engineering. The book is designed to help you cultivate an attitude toward design that encourages creativity and innovation, while considering the equally important considerations of customer requirements and satisfaction, quality, reliability, manufacturing methods and material selection, assembly, cost, the environment, and scheduling. Extensively class tested in senior- and graduate-level engineering design courses at the University of Maryland, the book gives equal time to conceptual and practical aspects. As each concept is introduced and explained, two book-long examples provide you with a realistic sense of how a product's creation progresses through its various stages. Numerous checklists and other practical guidelines help you learn to apply the IP2D2 method to your own work. Students and newly graduated engineers will appreciate the modern perspective that more nearly reflects what they will encounter in practice than what is obtainable in traditional texts. For more experienced practicing engineers, this is the new information they need to keep up with recent rapid changes and stay marketable today and in the future.

The current project specified ten objectives or goals that would be addressed through the initial analysis of the event database. This report addresses the first 9 of these goals, which include analyses of rear-end events, lane change events, the role of inattention, and the relationship between levels of severity. Goal 10 is a separate report and addresses the implications for a larger-scale data collection effort.
