Software testers require technical and political skills to survive what can often be a lose-lose relationship with developers and managers. Whether testing is your specialty or your stepping stone to a

career as a developer, there's no better way to survive the pressures put on testers than to meet the ten challenges described in this practical handbook. This book goes beyond the technical skills required for effective testing to address the political realities that can't be solved by technical knowledge alone. Communication and negotiation skills must be in every tester's tool kit. Authors Perry and Rice compile a "top ten" list of the challenges faced by testers and offer tactics for success. They combine their years of experience in developing testing processes, writing books and newsletters on testing, and teaching seminars on how to test. The challenges are addressed in light of the way testing fits into the context of software development and how testers can maximize their relationships with managers, developers, and customers. In fact, anyone who works with software testers should read this book for insight into the unique pressures put on this part of the software development process. Supporting these novice developers in becoming high quality engineers is a key objective of our engineering community. Yet, inexperienced developers have considerable trouble in applying the fundamentals of systematic software testing in industrial settings. Gaps in testing skills arise from inherent attributes of systematic testing itself and environmental attributes, such as the educational setting in universities. Frustrated, practitioners have long since devised cost intensive workarounds. In this thesis, this problem situation is qualitatively analyzed in great detail,

leveraging insights from three Grounded Theory studies. Employing Everett M. Rogers' 'Theory of the Diffusion of Innovation', strategic improvements to the onboarding situation are presented. Lastly, tool support for the strategies developed in this thesis is presented and evaluated.
