 This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

 Franklin, Jack, Marla, Thadius, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job - no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundstage, confront undead lecherous lodgers and other assorted beasties, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other - or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.

 The automobile is an icon of modern technology because it includes most aspects of modern engineering, and it offers an exciting approach to engineering education. Of course there are many existing books on introductory fluid/aero dynamics but the majority of these are too long, focussed on aerospace and don't adequately cover the basics. Therefore, there is room and a need for a concise, introductory textbook in this area. Automotive Aerodynamics fulfills this need and is an introductory textbook intended as a first course in the complex field of aero/fluid mechanics for engineering students. It introduces basic concepts and fluid properties, and covers fluid dynamic equations. Examples of automotive aerodynamics are included and the principles of computational fluid dynamics are introduced. This text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero/fluid mechanics. This textbook contains complex mathematics, which not only serve as the foundation for future studies but also provide a road map for the present text. As the chapters evolve, focus is placed on more applicable examples, which can be solved in class using elementary algebra. The approach taken is designed to make the mathematics more approachable and easier to understand. Key features: Concise textbook which provides an introduction to fluid mechanics and aerodynamics, with automotive applications
 Written by a leading author in the field who has experience working with motor sports teams in industry Explains basic concepts and equations before progressing to cover more

advanced topics Covers internal and external flows for automotive applications Covers emerging areas of aeroacoustics and heat transfer Automotive Aerodynamics is a must-have textbook for undergraduate and graduate students in automotive and mechanical engineering, and is also a concise reference for engineers in industry.

The fascinating story of Volkswagen's raging success and near collapse in America After a wild ride of ups and downs for almost three decades, Volkswagen has regained its stature as one of America's most beloved auto makers. In *Getting the Bugs Out*, journalist and auto industry expert David Kiley tells the complete story of the rise, fall, and comeback of Volkswagen. Kiley traces the company's rise from Ferdinand Porsche's original design for the Beetle, through the Nazi era, and up to the Beetle's ascendancy during the flower-power 1960s. He explores the reasons for VW's downward spiral through the 1970s and 1980s, including the devastating management blunders that led to such failed efforts as the Rabbit, Dasher, Thing, and Scirocco, and equally catastrophic marketing initiatives, culminating in the notorious "Fahrfeignugen" series of ads. Finally, drawing upon his unique access to company insiders, Kiley tells the story of how Volkswagen achieved its phenomenal comeback beginning in the late 1990s through a combination of visionary management, cutting-edge product development, and brilliant marketing and advertising strategies. David Kiley (Anne Arbor, MI), the Detroit Bureau Chief at USA Today, is a journalist with fifteen years of experience, ten of which have been devoted to covering the auto industry. He has written extensively for *Adweek* and *Brandweek* magazines.

On 25th February 2018, the Slovak investigative journalist Jan Kuciak and his fiancée Martina Kusnirova are found shot dead in their small house. They are 27 years old. The investigations which follow the double homicide lead to a story of power and its abuse, to servility and sex, to a mafia-like network that committed murders and planned more. A system emerges which has been hollowed out and subverted by crime, privatised and instrumentalised by criminal groups whose tentacles reach far into the judiciary, the police and to the very top of politics. Jan Kuciak and Martina Kusnirova had to die because they lived in a mafia state.
