NB: Black and white version. There are many excellent books on aerobatics, especially on how to fly aerobatics and the physics of aerobatics flight however few of them cover the complete scope of underpinning knowledge requirements to

safely fly aerobatics and have fun as this book does. The purpose of this book is to provide reference material for aerobatic pilots and to assist new aerobatic instructors in preparation of training material and knowledge enhancement. It includes tips on training for low level aerobatic endorsements. It also includes the knowledge required for flight instructor training endorsements in spin and aerobatics. We'll go further than the minimum requirements as the author's view is that an instructor must have a deeper knowledge than the minimum required by the trainee. The book is based on the classic aerobatic trainer, the Super Decathlon, commonly used in flying schools and so tailwheel endorsement training notes are included. This revised and updated edition includes some more technical information on flight performance, pilot stick forces and spinning. There is a new chapter on operating the Super Decathlon. As a follow up to this book the author recommends these two most authoritative books - Better Aerobatics by Alan Cassidy and Stall/Spin Awareness by Rich Stowell. The book addresses the Australian regulatory environment for tailwheel, spin and aerobatic training. Before we go too far - remember "PARE". If you remember nothing else but that I have succeeded in

something.

**Instrumentation Reference Book**

Wiley-Blackwell

**\*\*Effective as of 16 July 2020. Most others are outdated.\*\*** This Chart User's Guide is an introduction to the Federal Aviation Administration's (FAA) aeronautical charts and publications. It is useful to new pilots as a learning aid, and to experienced pilots as a quick reference guide. The FAA is the source for all data and information utilized in the publishing of aeronautical charts through authorized publishers for each stage of Visual Flight Rules (VFR) and Instrument Flight Rules (IFR) air navigation including training, planning, and departures, enroute (for low and high altitudes), approaches, and taxiing charts. The Notices to Airmen Publication (NOTAM) includes current Flight Data Center (FDC) NOTAMs. NOTAMs alert pilots of new regulatory requirements and reflect changes to Standard Instrument Approach

Procedures (SIAPs), flight restrictions, and aeronautical chart revisions. Aeronautical information changes rapidly, so it is important that pilots check the effective dates on each aeronautical chart and publication. To avoid danger, it is important to always use current editions and discard obsolete charts and publications. All graphics used in this guide are for educational purposes. Chart symbology may not be to scale. Please do not use them for flight navigation. The Chart User's Guide is updated as necessary when there is new chart symbology or changes in the depiction of information and/or symbols on the charts. When there are changes, it will be published in accordance with the 56-day aeronautical chart product schedule. Black and white print.
