This book describes geriatrics practice models that are used to guide the care of older adults, allowing seniors to remain at home, prevent functional disability and preserve quality of life. The models include specific interventions which are performed by health care workers to address the needs of older persons and their caregivers. These models

respect patient values, consider patient safety and appreciate psychosocial needs as well. Divided into six parts that discuss hospital-based models of care, transitions from hospital to home, outpatient-based models of care and emergency department models of care, this text addresses the needs of vulnerable patients and the community. Geriatric Models of Care is an excellent resource for health care leaders who must translate these programs to address the

needs of the patients in their communities. Remediation in medical education is the act of facilitating a correction for trainees who started out on the journey toward becoming excellent physicians but have moved off course. This book offers an evidence-based and practical approach to the identification and remediation of medical trainees who are unable to perform to standards. As assessment of clinical competence and professionalism has become more sophisticated and

ubiquitous, medical educators increasingly face the challenge of implementing effective and respectful means to work with trainees who do not yet meet expectations of the profession and society. Remediation in Medical Education: A Mid-Course Correction describes practical stepwise approaches to remediate struggling learners in fundamental medical competencies; discusses methods used to define competencies and the science underlying the

fundamental shift in the delivery and assessment of medical education; explores themes that provide context for remediation, including professional identity formation and moral reasoning, verbal and nonverbal learning disabilities, attention deficit disorders in high-functioning individuals, diversity, and educational and psychiatric topics; and reviews system issues involved in remediation, including policy and leadership challenges and faculty

development. Die selbstbestimmte Geburt Kösel-Verlag Integrated care incorporates behavioral and physical health services into primary care and specialty medical environments. Integrated care models are patient-centered; delivered by teams of medical professionals, utilize care coordination, and a population-based approach. This book is practical, office-based, and comfortably accessible to students, residents, faculty, and all

mental health professionals, primary care and medical specialists. We examine and recommend applying collaborative care and other existing models of integrated care based on existing literature. Demenz auf, beschreibt, wo Probleme liegen, wie sie versucht, die Krankheit auszutricksen. Natürlich gibt es sie, die Momente der Scham, der Traurigkeit. Aber Wendy ist und bleibt kämpferisch, und das lässt den Leser aufatmen und bewundernd weiterlesen.

For more than a decade, there has been growing interest and research on the pivotal role of emotions in educational settings. This ground-

breaking handbook is the first to highlight this emerging field of research and to describe in detail the ways in which emotions affect learning and instruction in the classroom as well as students' and teachers' development and well-being. Informed by research from a number of related fields, the handbook includes four sections. Section I focuses on fundamental principles of emotion, including the

interplay among emotion, cognition, and motivation, the regulation of emotion, and emotional intelligence. Section II examines emotions and emotion regulation in classroom settings, addressing specific emotions (enjoyment, interest, curiosity, pride, anxiety, confusion, shame, and boredom) as well as social-emotional learning programs. Section III highlights research on emotions in academic content

domains (mathematics, science, and reading/writing), contextual factors (classroom, family, and culture), and teacher emotions. The final section examines the various methodological approaches to studying emotions in educational settings. With work from leading international experts across disciplines, this book synthesizes the latest research on emotions in education.
