*Cars, Automobility and Development in Asia* explores the nexus between automobility and development in a pan-Asian comparative perspective. The book seeks to integrate the policies, production forms, consumption preferences and symbolism implicated in emerging Asian automobilities. Using empirically rich and grounded analyses of both comparative and single-country case studies, the authors chart new approaches to studying automobility and development in emerging Asia.

#### Jeep CJ 1972-1986 McFarland

Identifying the Jeep CJ series vehicles as the most popular off-road vehicles of all time may actually qualify as an understatement. They really are that popular. The CJ series arguably started

after World War II with the CJ-2A being introduced to the masses, and while the early CJs have their share of enthusiasts, the largest group of enthusiasts began their love affair with the AMC-powered Jeep CJ-5s beginning in 1972. Joined by the longer-wheelbase CJ-7 models introduced in 1976, the CJ models were wildly popular through their discontinuation in 1986, when the Wrangler was introduced. These were the only models originally equipped with V-8 engines in any meaningful way. This era combined the ruggedness of the early Jeeps with some of the advancements and horsepower of a more modern era; it makes a platform that is both fun to own and to modify. Jeep guru Michael Hanssen covers all of the systems that can be upgraded to

improve your Jeep's performance. Upgrades include suspension components such as springs, shocks, and steering modifications; driveline components including differentials, transmissions, transfer cases, and axles; engine upgrades including engine swaps; wheel and tire upgrades; aftermarket accessories; and armor such as skid plates, bumpers, brake upgrades, and more. Whether you are looking to get into serious off-roading or just want to make your classic Cj a little more fun, this book will be a valuable tool in your shop or library. p.p1 {margin: 0.0px 0.0px 0.0px; font: 12.0px Arial} **850, 124, 128, 131, X1/9, Brava, Super Brava, Strada** CarTech Inc The entire story of Andrews County, Texas from 1876 to 1978. *Andrews County History* Hearst Books

This work examines the change from live to filmed television dramas during the period 1952-1958 and the characteristics and programs that are most associated with filmed television drama. Along with many technical changes that had to be made in the industry in order to convert live television to filmed television came an interesting social one. The American society in general was developing a growing interest in the lives of ordinary people, and television moved with them, offering more programs that concentrated on the middle and lower classes. Because of the inherent

qualities of filming, television began to feature more documentary-like realism, began to broaden its interpretation of traditional romantic escapism to include more outer space and supernatural science fiction, began to better fulfill materialistic desires through well-designed, enjoyable commercials, and began to offer the best dramas and most popular personalities, often leading viewers to greater self-appreciation and richer lives. This work focuses on the important anthology programs and specials that were on the air from 1952 to 1958 such as Kraft Television Theatre, Philco Television Playhouse, and The Hallmark Hall of Fame, filmed serials like Colgate Theatre, Amos 'n' Andy, and I Love Lucy, and the challenges of converting from live to filmed television

drama.

The Communist Party dictatorships in Hungary and East Germany sought to win over the "masses" with promises of providing for ever-increasing levels of consumption. This policy-successful at the outset-in the long-term proved to be detrimental for the regimes because it shifted working class political consciousness to the right while it effectively excluded leftist alternatives from the public sphere. This book argues

that this policy can provide the key to understanding of the collapse of the regimes. It examines the case studies of two large factories, Carl Zeiss Jena (East Germany) and Rába in Győr (Hungary), and demonstrates how the study of the

formation of the relationship between the workers' state and the industrial working class can offer illuminating insights into the important issue of the legitimacy (and its eventual loss) of Communist regimes.
