The written text was a pervasive feature of cultural practices in the medieval Middle East. At the heart of book circulation stood libraries that experienced a rapid expansion from the twelfth century onwards. While the existence of these libraries is well known our knowledge of their content and structure has been very limited as hardly any medieval Arabic catalogues have been preserved. This book discusses the largest and earliest medieval library of the Middle East for which we have documentation - the Ashrafiya library in the very centre of Damascus - and edits its catalogue. This catalogue shows that even book collections attached to Sunni religious institutions could hold rather unexpected titles, such as stories from the 1001 Nights, manuals for traders, medical handbooks, Shiite prayers, love poetry and texts extolling wine consumption. At the same time this library catalogue decisively expands our knowledge of how the books were spatially organised on the bookshelves of such a large medieval library. With over 2,000 entries this

catalogue is essential reading for anybody interested in the cultural and intellectual history of Arabic societies. Setting the Ashrafiya catalogue into a comparative perspective with contemporaneous libraries on the British Isles this book opens new perspectives for the study of medieval libraries.

Wordplay can be seen as a genuine interface phenomenon. It can be found both in everyday communication and in literary texts, and it can fulfil a range of functions - it may be entertaining and comical, it may be used to conceal taboo, and it may influence the way in which the speaker's character is perceived. Moreover, wordplay also reflects on language and communication: it reveals surprising alternative readings, and emphasizes the phonetic similarity of linguistic signs that also points towards relations on the level of content. Wordplay unravels characteristics of literary language in everyday communication and opens up the possibility to analyze literary texts from a linguistic perspective. The first two volumes of the series *The Dynamics of Wordplay* therefore aim at bringing together contributions from linguistics and literary studies, focusing on theoretical issues such as basic techniques of wordplay, and its relationship to genres and

discourse traditions. These issues are complemented by a series of case studies on the use of wordplay in individual authors and specific historical contexts. The contributions offer a fresh look on the multifaceted dynamics of wordplay in different communicative settings.

Through a series of case studies, this third volume in the Earth series deals with the technological constraints and innovations that enabled societies to survive and thrive across a range of environmental conditions. The contributions are structured into three sections to draw out particular commonalities and contrasts in the choices made by pre-industrial communities in the construction of varied landscapes and cultural heritage: Landnam, from the Old Norse for 'taking of land', deals with colonisation, including the drivers and processes through which colonisers developed an understanding of the productive potential and limitations of their new lands. Fields and field systems: Field-walls are a distinctive and apparently timeless characteristic of many pre-industrial farming landscapes but they present many the challenges to their study, such as the effects of ploughing, abandonment and land-use change and of urban development in fertile lowland zones which may eradicate, reduce or conceal past systems of land-use and division. The importance of indirect and proxy evidence is illustrated and the value of interdisciplinary and modelling approaches emphasised. Agro-pastoralism: focuses on the complex 'time-space adaptations' devised for managing cultivation and livestock production, particularly the need to prevent stock incursions into arable fields during the growing season whilst making effective use of seasonal grazing resources. The contributions focus on mountainous areas, where temporary migrations, in the form of transhumance, provided access to a diversity of resources based around seasonal constraints on their availability and productivity.

The past decade has revealed unfavourable trends in e.g. fertility, udder health and locomotion in some major dairy cattle breeds due to a large increase in production and insufficient consideration of functional traits in the breeding goals. Such unfavourable trends in some functional traits increase costs. Additionally, the enlargement of herds leads to less available labour time per individual cow. This asks for cows that are easy to handle. At the same time, society is demanding a higher welfare standard of animals. These contradicting developments have increased the desire for so called more robust animals. Robustness can be defined as 'the ability to maintain homeostasis in commonly accepted and sustainable herds of the near future'; or 'the ability of the cow to function well in the environment she lives in as well as in a wide range of climates and production systems'. This book contains a series of articles (26) dealing with the concept of robustness, including aspects like evolution, genetics, environment, animal health and welfare, and integrity. Besides the major functional traits also the links to energy balance, hot climatic conditions, and the attitude and input of stakeholders towards robustness as part of the breeding program are discussed. This book is the first attempt to summarise the available knowledge concerning this topic in cattle, making this book unique. The contributions are from authors of 16 countries from all over the world. However, the focus is presently on farm animal level, while in future robustness of the whole production system may also require additional attention.

In April 1976, Dan Connell slipped into Eritrea's besieged capital, Asmara, where he witnessed the assassination of a top-ranking Ethiopian official and its bloody aftermath-the summary execution of dozens of innocent civilians. His front-page account in The Washington Post broke Ethiopia's long-standing information blockade. Connell went on to write about the radical social transformation underway in guerrilla-held areas, the near defeat of Ethiopia's American-backed army, the

Originally published in 1986, this book subverts an attitude towards the moral dimension of life which the author terms 'ethical cynicism'. It discusses a theory of moral powers - a theory which shows that moral values are immensely potent sources of power. The author argues that there is a conceptual affinity between the Wittgensteinian account of language and the Marxist theory of history such that the two complement and even require one another in various aspects.

Extending their successful series of collections on Zen Buddhism, Heine and Wright present a fifth volume, on what may be the most important topic of all - Zen Masters. Following two volumes on Zen literature (Zen Classics and The Zen Canon) and two volumes on Zen practice (The Koan and Zen Ritual) they now propose a volume on the most significant product of the Zen tradition - the Zen masters who have made this kind of Buddhism the most renowned in the world by emphasizing the role of eminent spiritual leaders and their function in establishing centers, forging lineages, and creating literature and art. Zen masters in China, and later in Korea and Japan, were among the cultural leaders of their times. Stories about their comportment and powers circulated widely throughout East Asia. In this volume ten leading Zen scholars focus on the image of the Zen master as it has been projected over the last millennium by the classic literature of this tradition. Each chapter looks at a single prominent master. Authors assess the master's personality and charisma, his reported behavior and comportment, his relationships with teachers, rivals and disciplines, lines of transmission, primary teachings, the practices he emphasized, sayings and catch-phrases associated with him, his historical and social context, representations and icons, and enduring influences.
