This book provides a comprehensive and integrated approach to management strategy that is based on economics. A basic introductory strategy text that integrates economic analysis with management strategy, it takes into account global competition and high-tech (Internet) developments, and recognizes that companies today can no longer expect to sustain competitive advantage but must rely on innovation (of products, processes, and transactions). Although many of the principles are illustrated with numerical examples, the text does not require a background course in economics or mathematics, and does not contain technical graphs or equations. Thus, the book is suitable for undergraduate managerial economics and strategy courses, as well as for introductory MBA courses in business strategy and as a companion to case studies. The Power Point Slides for each of the chapters is available upon request for all instructors who adopt this book as a course text. Please send your request to sales@wspc.com.

 The goal of Thomas and Maurice's Managerial Economics is to

teach students the economic way of thinking about business decision and strategy. This edition continues to develop critical thinking skills and provides students with a logical way of analysing both the routine decisions of managing the daily operations of a business as well as the longer-run strategic plans that seek to manipulate the actions and reactions of rival firms. Managerial Economics is a self-contained textbook that requires no previous training in economics. While maintaining a rigorous style, this book is designed to be one of the most accessible books in managerial economics from which to teach and learn because of its clarity of presentation and strong end of chapter problems. Rather than parading students quickly through every interesting or new topic in microeconomics and industrial organization, this 11th edition instead carefully develops and applies the most useful concepts for business decision making and strategic planning.
