 Printed circuit boards are made of multiple layers of core, prepreg, and copper foil. Core layers are made of glass fiber weave infused with resin. Core layers are already cured and hardened at high temperature and have a copper foil on each side. Prepreg, short for pre-impregnated, is a glass weave impregnated with resin that is not yet hardened.

 Chapter 12: Electronic Circuit Simulation and Layout Software Chapter 12 - Signal integrity simulation with OrCAD. Pages 543-553. Abstract. Signal integrity or "SI" is a measure of the quality of electrical signals sent from driver to receiver. Deep explanation of SI terms and issues is provided in Chapter 6, Printed circuit board design for signal integrity. Here we will explain briefly how the SI ...
