Demonstrates how economics can explain the transformation of human society from mobile foraging bands to the first city-states.  
WTF?: What's the Future and Why It's Up to Us Walter de Gruyter GmbH & Co KG  
*Semigroups of Bounded Operators and Second-Order Elliptic and Parabolic Partial Differential Equations* aims to propose a unified approach to elliptic and parabolic equations with bounded and smooth coefficients. The book will highlight the connections between these equations and the theory of semigroups of

operators, while demonstrating how the theory of semigroups represents a powerful tool to analyze general parabolic equations. Features Useful for students and researchers as an introduction to the field of partial differential equations of elliptic and parabolic types Introduces the reader to the theory of operator semigroups as a tool for the analysis of partial differential equations  
Automata, Languages, and Programming IGI Global  
Many consider Lewis Binford to be the single most influential figure in archaeology in the last half-century. His contributions to the "New Archaeology" changed the course of the field, as he argued for the development of a scientifically rigorous framework to guide the excavation and interpretation of the archaeological record. This book, the culmination of Binford's intellectual legacy thus far, presents a detailed description of his methodology and

its significance for understanding hunter-gatherer cultures on a global basis. This landmark publication will be an important step in understanding the great process of cultural evolution and will change the way archaeology proceeds as a scientific enterprise. This work provides a major synthesis of an enormous body of cultural and environmental information and offers many original insights into the past. Binford helped pioneer what is now called "ethnoarchaeology"—the study of living societies to help explain cultural patterns in the archaeological record—and this book is grounded on a detailed analysis of ethnographic data from about 340 historically known hunter-gatherer populations. The methodological framework based on this data will reshape the paradigms through which we understand human culture for years to come.

**Constructing Frames of Reference** Elsevier Health Sciences lead the reader to a theoretical understanding of the subject without neglecting its practical aspects. The outcome is a textbook that is mathematically honest and rigorous and provides its target audience with a wide range of skills in both ordinary and partial differential equations." --Book Jacket.

For this issue, we reflect back on almost 20 years of ICT Update (nearly 100 issues). ICT Update's objective has always been to capture contemporary developments in ICTs for agriculture; the trends, latest technologies and stories from the field. By looking

back, we can see significant changes in the ICT4Ag landscape, and draw lessons on how to move forward and address ongoing challenges for inclusion, adoption and innovation. This issue highlights three of ICT Update's recurring themes: learning; barriers for inclusion and adoption of ICTs; and innovation and entrepreneurship.

Tense, Reference, and Worldmaking Random House

The advances in semiconductor detectors, scintillators, photodetectors such as silicon photomultipliers (SiPM), and readout electronics have experienced tremendous growth in recent years in terms of basic technologies and a variety of applications. The second edition of Radiation Detection Systems presents variety of radiation detection systems, giving readers a broad view of the state-of-the-art in the design of detectors, front-end electronics, and systems offering optimized choices of the detection tools for a particular application. The new edition has been divided into two volumes. This volume on Medical Imaging, Industrial Testing, and Security Applications presents specific applications of the detection systems in medical imaging, industrial testing, and security applications. These newly developed technologies play a vital role in the detection, diagnosis, and treatment of major human diseases. Featuring contributions from leading experts and pioneers in their respective fields, this book: Describes new advances in development of detection systems based on CdZnTe (CZT) and CdTe detectors utilizing a direct conversion of radiation to electric signals Reports a recent progress in technologies and performance of SiPM used for reading the light from scintillators Explores exciting new application opportunities created by

development of the cutting-edge detection technologies in X-ray spectroscopy, computed tomography (CT), bone dosimetry, and nuclear medicine (PET, SPECT) Considers the future use of photon-counting detectors in clinical CT scanners providing K-edge imaging to reduce the amount of contrast agents and ultimately offering both an anatomical and a functional information Describes, uses of radiation detection systems in security applications such as luggage scanning, dirty bomb detection, and border control With its combined coverage of new materials and innovative new system approaches, as well as a succinct overview of recent developments, this book is an invaluable tool for any engineer, professional, or student working in electronics or an associated field. Readers can refer to the other volume, Sensor Materials, Systems, Technology, and Characterization Measurements, which puts emphasis on sensor materials, detector structures, front electronics technology, and their designs and system optimization for different applications.

Ecological Biomonitoring, Volume 58, the latest release in the Advances in Ecological Research series, is the first part of a thematic on ecological biomonitoring, including specific chapters that cover Aquatic volatile metabolomics - using trace gases to examine ecological processes, Next generation approaches to rapid monitoring Bio-aerosol and the link between human health and environmental microbiology, NGB in Canadian wetlands,

Monitoring the biodiversity and functioning of terrestrial systems via high resolution trace gas fluxes, and Computational approaches to gathering biomonitoring data from social media platforms: a superior solution to next generation biomonitoring challenges. Provides information that relates to a thorough understanding of the field Deals with topical and important reviews on the physiology, populations and communities of plants and animals

Economic Prehistory CTA

This monograph contains papers that were delivered at the special session on Geometric Potential Analysis, that was part of the Mathematical Congress of the Americas 2021, virtually held in Buenos Aires. The papers, that were contributed by renowned specialists worldwide, cover important aspects of current research in geometrical potential analysis and its applications to partial differential equations and mathematical physics.

The five volume set LNCS 10960 until 10964 constitutes the refereed proceedings of the 18th International Conference on Computational Science and Its Applications, ICCSA 2018, held in Melbourne, Australia, in July 2018. Apart from the general tracks, ICCSA 2018 also includes 34 international workshops in various areas of computational sciences, ranging from computational science technologies, to specific areas of computational sciences, such as computer graphics and virtual reality. The total of 265 full papers and 10 short papers presented in the 5-volume proceedings set of ICCSA 2018, were carefully reviewed and selected from 892 submissions.

'The man who can really make a whole industry happen.' Eric Schmidt, Executive Chairman of Google 'A punchy and provocative book . . . WTF? is an insightful and heartfelt plea, daring us to reimagine a better economy and society.' Financial Times Renowned as 'the Oracle of Silicon Valley', Tim O'Reilly has spent three decades exploring the world-transforming power of information technology. Now, the leading thinker of the internet age turns his eye to the future - and asks the questions that will

frame the next stage of the digital revolution: · Will increased automation destroy jobs or create new opportunities? · What will the company of tomorrow look like? · Is a world dominated by algorithms to be welcomed or feared? · How can we ensure that technology serves people, rather than the other way around? · How can we all become better at mapping future trends? Tim O'Reilly's insights create an authoritative, compelling and often surprising portrait of the world we will soon inhabit, highlighting both the many pitfalls and the enormous opportunities that lie ahead. 'Tim O'Reilly has been at the cutting edge of the internet since it went commercial.' New York Times 'O'Reilly's ability to quickly identify nascent trends is unparalleled.' Wired

Motivating learners to explore and investigate scientific concepts, this new core Course Book helps learners actively connect study with wider issues relevant to the world today. The most comprehensive match to the new syllabus first examined 2017 and the only DP Environmental Systems developed directly with the IB, the inquiry-based approach truly engages learners, strengthening achievement. Integrated links to the Big Questions support a holistic approach to teaching and learning, encouraging

students to make links between topics and other subjects. Truly engage learners with scientific concepts - the inquiry-based approach drives active exploration, investigation and critical thought Fully cover the new syllabus - the most comprehensive support for the new syllabus (first examination 2017), developed directly with the IB Strengthen achievement - current case studies and activities accessibly connect learning with relevant global issues, driving motivation and achievement Accurately implement the

Next Generation Biomonitoring: Routledge

Offers a clear view of the utility and place for survey data within the broader Big Data ecosystem This book presents a collection of snapshots from two sides of the Big Data perspective. It assembles an array of tangible tools, methods, and approaches that illustrate how Big Data sources and methods are being used in the survey and social sciences to improve official statistics and estimates for human populations. It also provides examples of how survey data are being used to evaluate and improve the quality of insights derived from Big Data. Big Data Meets Survey Science: A Collection of Innovative Methods shows how survey data and Big Data are used together for the benefit of one or more sources of data, with numerous chapters providing consistent illustrations and examples of survey data enriching the evaluation of Big Data sources. Examples of how machine learning, data mining, and other data science techniques are inserted into virtually every stage of the survey lifecycle are presented. Topics covered include: Total Error Frameworks for Found Data; Performance and Sensitivities of Home Detection on Mobile Phone Data; Assessing Community Wellbeing Using

Google Street View and Satellite Imagery; Using Surveys to Build and Assess RBS Religious Flag; and more. Presents groundbreaking survey methods being utilized today in the field of Big Data Explores how machine learning methods can be applied to the design, collection, and analysis of social science data Filled with examples and illustrations that show how survey data benefits Big Data evaluation Covers methods and applications used in combining Big Data with survey statistics Examines regulations as well as ethical and privacy issues Big Data Meets Survey Science: A Collection of Innovative Methods is an excellent book for both the survey and social science communities as they learn to capitalize on this new revolution. It will also appeal to the broader data and computer science communities looking for new areas of application for emerging methods and data sources.

The Sustainable Development Goals (SDGs) set a broad and ambitious programme for the world to achieve by 2030. With 17 Goals, underpinned by 169 Targets, the complex and integrated nature of the 2030 Agenda presents national governments with huge challenges for implementation. To assist countries, the OECD has developed a unique methodology allowing comparison of progress across SDG goals and targets.

*ICT Update 92: Reflections on digitalisation* Academic Press

The theory of time series models has been well developed over the last thirty years. Both the frequency domain and time domain approaches have been widely used in the analysis of linear time series models. However, many physical phenomena

cannot be adequately represented by linear models; hence the necessity of nonlinear models and higher order spectra. Recently a number of nonlinear models have been proposed. In this monograph we restrict attention to one particular nonlinear model, known as the "bilinear model". The most interesting feature of such a model is that its second order covariance analysis is very similar to that for a linear model. This demonstrates the importance of higher order covariance analysis for nonlinear models. For bilinear models it is also possible to obtain analytic expressions for covariances, spectra, etc. which

are often difficult to obtain for other proposed nonlinear models. Estimation of bispectrum and its use in the construction of tests for linearity and symmetry are also discussed. All the methods are illustrated with simulated and real data. The first author would like to acknowledge the benefit he received in the preparation of this monograph from delivering a series of lectures on the topic of bilinear models at the University of Bielefeld, Ecole Normale Supérieure, University of Paris (South) and the Mathematisch Centrum, Amsterdam.
