Hind Technologies  
MOST PEOPLE DO NOT  
LOOK FORWARD to  
visiting the dentist.  
Many avoid it as long  
as possible. Yet those  
same people will leave  
the dentist's office  
relieved, often with big  
smiles (assuming the  
Novocain has worn off).  
What most people do  
not realize is that the  
profession of dentistry  
has come a long way in  
recent years. New  
techniques and  
technologies such as  
lasers and air abrasion  
devices have changed  
the way dentists treat  
patients. A visit no  
longer has to be a  
source of dread.  
Dentistry involves  
more than just teeth  
alone. A dentist  
provides healthcare for  
the oral cavity,  
including soft tissue  
and bone, as well as  
the associated head

and neck region. A  
typical dentist visit  
starts with an  
examination of the  
patient's teeth and  
mouth tissue. Based on  
what the dentist finds,  
a diagnosis is made  
and a treatment plan is  
proposed. Treatment  
may include removing  
tooth decay, filling  
cavities, repairing  
damaged teeth,  
extracting teeth,  
and/or replacing lost  
teeth. Most dentists  
are generalists who  
provide a wide array of  
services. On a given  
day, a general dentist  
will see people of all  
ages and backgrounds  
- sometimes entire  
families. There is never  
a dull moment because  
dentists never know  
who will be in the  
examining room, or  
what they will need. A  
patient could just be  
there for a checkup

and cleaning. In that case, the dental hygienist on staff will take care of the cleaning, and the dental assistant will take a set of x-rays. The dentist will look at the x-rays in search of problems that need to be addressed right away or point out possible problems that need to be watched. The next patient could be suffering from a damaged tooth, broken during a fall. The dentist will need to determine if and how the tooth can be saved, and provide immediate treatment. There are also dentists who practice in certain specialized areas of dentistry. There are nine specialties recognized by the American Dental Association (ADA). Each requires

additional training, but the payoff is a higher than average income for the licensed specialist. The most popular specialties are orthodontics (teeth straightening) and prosthodontics (artificial teeth). Dentists are highly educated professionals. It takes four years of undergraduate studies as a pre-dental student, followed by another four years in dental school. In order to get into dental school, the applicant must first take the Dental Acceptance Test (DAT) by their junior year in college. Getting into dental school is competitive so scoring well on the test is important. Many students take practice tests, sometimes as early as high school.

Dental school is a rigorous mix of classroom instruction and hands-on clinical work. Upon graduation, dentists need to obtain a license to practice. Specific licensure requirements vary by state. Newly minted dentists can look forward to one of the best careers available today. They are well compensated with a median annual income of \$150,000. Even those starting out can expect to earn at least \$65,000 in their first year of practice. Those who take the time to become specialists can earn more than \$180,000. Dentistry is also a stable career with more opportunities than the available dentists can fill. There is a growing demand for dentists that is not expected to

slow down any time soon. Perhaps most important of all is the agreeable work-life balance dentists enjoy. Most dentists work in private practice and can decide for themselves how much they want to work. Dentistry is one of the few professional careers that actually offers the chance to work part time without losing traction. If you have an interest in healthcare, and like to work with your hands as well as your mind, dentistry is worth a look."

The syllabus for the FRCS (ORL-HNS) is vast, and a sound preparation for the exams has traditionally involved assimilating knowledge from a wide range of sources. This book provides a focussed guide for exam candidates. More than a question and answer book, this book is a coaching manual. Each section features a combination of model answers, pearls of wisdom, checklists and pointers for further reading. Detailed

advice is provided for both Part 1 and Part 2 of the examination. Viva topics that have featured in the exam in recent years have been included, and have then been supplemented by invaluable editorial contributions from leaders in each of the subspecialties. Trainees frequently comment that exam preparation is an enlightening process and the knowledge gained would have served them well during their time as an ENT registrar or Otorhinolaryngology resident. This book will also serve as a valuable learning tool for trainees as early as ST3 and facilitate their development of effective and safe clinical practice.
