Human Resource Management in Sport and Recreation McGraw-Hill/Irwin

Operations Management in the Supply Chain: Decisions and Cases is an ideal book for the instructor seeking a short text with cases. This book employs a cross-functional perspective that emphasizes strategy and critical thinking, appealing to non-majors and practical for use in an MBA level or undergraduate course in operations management. The size and focus of the book also make the text attractive for the cross-functional curriculum where students are required to purchase more than one text. The sixteen cases offer variety in length and rigor; and several are from Ivey, Stanford, and Darden. This mix makes the book appropriate for both undergraduates and MBA students.

Human Resource Management in Sport and Recreation, Third Edition, provides current and future practitioners with a solid foundation in research and application of human resource

management in the sport and recreation industries. The third edition prepares students for success by bringing into focus the three divergent groups of people who constitute human resources in sport and recreation organizations: paid professional workers, volunteers, and the clients themselves. Dr. Packianathan Chelladurai, pioneer in the field of sport management, continues to bring his expertise to this edition; he is joined by new coauthor Dr. Shannon Kerwin, an active researcher in organizational behavior and human resource management in sport. With more than 50 collective years of experience in teaching management of human resources, Chelladurai and Kerwin synthesize the core dynamics of human resources and the management of these resources as well as the role of the sport and recreation manager. The third edition's updated references, examples, and studies reflect the increased growth, interest, and complexity in human resource management in recreation and sport in recent years. Additional enhancements of the third edition include the following:

- A new opening chapter on the significance of human resources describes consumer services, professional services, and human services and provides a model for the subsequent chapters.
- A greater emphasis is

placed on recruitment and training as an essential component of success. • New “Technology in Human Resource Management” and “Diversity Management of Human Resources” sidebars connect theory to practice for sport managers as they confront contemporary issues in the workplace. • Case studies at the end of each chapter help students apply concepts from the chapter to real-world scenarios. • Instructor ancillaries help instructors prepare for class with the use of an instructor guide with a syllabus, tips for teaching, and additional resources, as well as an image bank. In addition, updated pedagogical aids include learning objectives, summaries, lists of key terms, comprehension questions, and discussion questions to guide student learning through each chapter. Sidebars throughout the text provide applied concepts, highlight relevant research, and offer digestible takeaways. Organized into four parts, the text begins by outlining the unique and common characteristics of the three groups of human resources in sport and recreation. Part II focuses on differences in people and how the differences affect behavior in sport and recreation organizations. In part III, readers explore significant organizational processes in the management of human resources. Part IV discusses two significant outcomes expected of human resource practices: satisfaction and commitment. Finally, a conclusion synthesizes information and presents a set of founding and guiding themes. *Human Resource Management in Sport and Recreation, Third Edition*, explains essential concepts in human resources in the sport and recreation industries. The authors present a clear and concise treatise on the critical aspects of management of human resources within sport and recreational organizations to help aspiring and current professionals maximize their potential in the field.

This book presents a general conceptual framework to translate principles of system science and engineering to service design. Services are co-created immaterial, heterogeneous, and perishable state changes. A service system includes the intended benefit to the customer and the structure and processes that accomplish this benefit. The primary focus is on the part of the service system that can reproduce such processes, called here a Service Machine, and methodological guidelines on how to analyze and design them. While the benefit and the process are designed based on the domain knowledge of each respective field, service production systems have common properties. The Service Machine is a metaphor that elicits the fundamental characteristics of service systems that do something efficiently, quickly, or repeatedly for a defined end. A machine is an artifact designed for a purpose, has several parts, such as inputs, energy flows, processors, connectors, and motors assembled as per design specifications. In case of service machine, the components are various contracts assembled on contractual frames. The book discusses Emergency Medical Services (EMS) and Emergency Departments (ED) as cases. They illustrate that service machines need to be structured to adapt to the constraints of the served market acknowledging the fact that services are co-created through the integration of producers’ and customers’ resources. This book is highly recommended for those who are interested in understanding the fundamental concepts of designing service machines.
