Springer

In this laboratory textbook for students of organic chemistry, experiments are designed to utilize standard-scale ("macroscale") glassware and equipment but with smaller amounts of chemicals and reagents. The textbook features a large number of traditional organic reactions and syntheses, as well as the isolation of natural products and experiments with a biological or health sciences focus. The organization of the text is based on essays and topics of current interest. Contains a comprehensive treatment of laboratory techniques including both small-scale and some microscale methods.

Friction, lubrication, adhesion, and wear are prevalent physical phenomena in everyday life and in many key technologies. This book incorporates a bottom-up approach to friction, lubrication, and wear into a versatile textbook on tribology. This is done by focusing on how these tribological phenomena occur on the small scale -- the atomic to the micrometer scale -- a field often called nanotribology. The book covers the microscopic origins of the common tribological concepts of roughness, elasticity, plasticity, friction coefficients, and wear coefficients. Some macroscale concepts (like elasticity) scale down well to the micro- and atomic-scale, while other macroscale concepts (like hydrodynamic lubrication) do not. In addition, this book also has chapters on topics not typically found in tribology texts: surface energy, surface forces, lubrication in confined spaces, and the atomistic origins of friction and wear. These chapters cover tribological concepts that become increasingly important at the small scale: capillary condensation, disjoining pressure, contact electrification, molecular slippage at interfaces, atomic scale stick-slip, and atomic bond breaking. Throughout the book, numerous examples are provided that show how a nanoscale understanding of tribological phenomena is essential to the proper engineering of important modern technologies such as MEMS, disk drives, and nanoimprinting. For the second edition, all the chapters have been revised and updated to incorporate the most recent advancements in nanoscale tribology. Another important enhancement to the second edition is the addition of problem sets at the end of each chapter.

Focusing on designing and building in underserved communities around the globe, 'Small Scale, Big Change', expresses a desire for social change and a belief in the social responsibility of architecture.

A Grass-Based Approach for Health, Sustainability, and Profit Oxford University Press, USA

From biofuels, green chemistry, and nanotechnology, this proven laboratory textbook provides the up-to-date coverage students need in their coursework and future careers. The book's experiments, all designed to utilize microscale glassware and equipment, cover traditional organic reactions and syntheses, the isolation of natural products, and molecular modeling and include project-based experiments and experiments that have a biological or health science focus. Updated throughout with new and revised experiments, new and revised essays, and revised and expanded techniques,

the Fifth Edition is organized based on essays and topics of current interest.

In June 2014, FAO member-states endorsed the Voluntary Guidelines for Securing Sustainable Small-Scale Fisheries (SSF Guidelines). These Guidelines are one of the most significant landmarks for small-scale fisheries around the world. They are comprehensive in terms of topics covered, and progressive, with their foundations based on human rights and other key principles. It can be anticipated that implementing the SSF Guidelines, whether at local, national, or regional levels, will be challenging. This book contains in-depth case studies where authors discuss the extent to which the Guidelines can help improve the realities of small-scale fishing men and women globally and make their livelihoods and communities more secure. This will require policy intervention and innovation, along with contributions of civil society organizations and academia. However, most of all it will necessitate the empowerment of fishing people so that they can become active participants in decision making on matters where their well-being and human rights are at stake. By endorsing the SSF Guidelines, states have committed themselves to support and facilitate this development. This book asks whether states can successfully "walk the talk," and provides advice as to how they can do so. The collection of case studies sets the platform for an interactive dialogue space for researchers, policy makers, civil society and small-scale fishing communities to start the conversation about the monitoring and evaluation of the implementation of the SSF Guidelines at local, national, regional and global levels. An added value is that it helps add focus to our work as civil society activists involved in ensuring the application of the SSF Guidelines. Naseegh Jaffer - General Secretary, World Forum of Fisher People (WFFP) This collection offers many ways in which institutions enabling small-scale fisheries can protect and promote sustainability, food security, customary tenure, self-management, and market access, while fostering such benefits as ecosystem-based management, protected areas, incorporation of local knowledge, and poverty alleviation. You will want to put this book in the hands of policy-makers and practitioners immediately -- and for years to come. Evelyn Pinkerton - Professor, Simon Fraser University, Canada

 How can evaluation be used most effectively, and what are the strengths and weaknesses of the various methods? Colin Robson provides guidance in a clear and uncluttered way. The issue of collaboration is examined step-by-step; stakeholder models are compared with techniques such as participatory evaluation and practitioner-centred action research; ethical and political considerations are placed in context; and the best ways of communicating findings are discussed. Each chapter is illustrated with helpful exercises to show the practical application of the issues covered, making this an invaluable introduction for anyone new to evaluation.

This book advances discussions of values in fisheries by showing the rich theoretical insights and connections possible when value is grounded in a multi-dimensional social well being approach. Questions of value have long been a central, if often unacknowledged, concern in maritime studies and in research on fisheries. Social scientists have looked at changing perceptions of value as coastal regions and fisheries have industrialized, economic interconnections have deepened, ecosystems have been depleted, shifts in population have occurred, and governance arrangements have been transformed. With a focus on the diverse ways in which small-scale fisheries are valued, the contributions to this volume address these and other themes through cases from numerous countries in Asia, Europe, and Latin America. "This volume provides a timely contribution to the

development of new approaches that seek to capture the complexity of how fisheries can be understood beyond standard mono-dimensional, and often economic, interpretations. Each chapter makes a clear and stand-alone contribution to conceptual and methodological advancement, and collectively these works cover a wide range of frameworks and schools of thought." Dr Sarah Coulthard, Senior Lecturer in International Development, Northumbria University, UK "The list of contributing authors [is] impressive and covers a wide geographical range of illustrative examples, [which] helps to demonstrate the global value of small-scale fisheries." Professor J. Allister McGregor, Professor in Political Economy, the University of Sheffield, UK

As the wine industry has experienced a period of rapid global expansion, there is a renewed emphasis on quality and consistency even within the small winery industry. Written for the small production program, *A Complete Guide to Quality in Small-Scale Wine Making* is for the novice to intermediate level winemaker seeking foundational information in chemistry and sensory science as they relate to wine quality at a technical level. Drawing from personal experience as well as scientific literature, this book introduces the core concepts of winemaking before delving into methods and analysis to provide practical insights into creating and maintaining quality in the wine product. Understand the chemistry and sensory science at the foundation of quality wines Explore real-world examples of key analysis and application of concepts Practice methods and exercises for hands-on experience

Full of practical everyday advice, this guide explains how a natural, organic approach to livestock farming produces healthy animals, reduces costs, and increases your operation's self-sufficiency. Livestock expert Carol Ekarius helps you create a viable farm plan, choose suitable livestock, care for your animals' health, and confidently manage housing, fencing, and feeding. Case studies of successful farmers provide inspiration as you learn everything you need to know to run a prosperous livestock farm and make the lifestyle of your dreams a reality. This publication conforms to the EPUB Accessibility specification at WCAG 2.0 Level AA.

The most comprehensive guide to date on raising all-natural poultry for the small-scale farmer, homesteader, and professional grower. *The Small-Scale Poultry Flock* offers a practical and integrative model for working with chickens and other domestic fowl, based entirely on natural systems. Readers will find information on growing (and sourcing) feed on a small scale, brooding (and breeding) at home, and using poultry as insect and weed managers in the garden and orchard. *Ussery's* model presents an entirely sustainable system that can be adapted and utilized in a variety of scales, and will prove invaluable for beginner homesteaders, growers looking to incorporate poultry into their farm, or poultry farmers seeking to close their loop. *Ussery* offers extensive

information on: The definition of an integrated poultry flock (imitation of natural systems, integrating patterns, and closing the circle) Everything you need to know about your basic chicken (including distinctive points about anatomy and behavior that are critical to management) Extended information on poultry health and holistic health care, with a focus on prevention Planning your flock (flock size, choosing breeds, fowl useful for egg vs. meat production, sourcing stock) How to breed and brood the flock (including breeding for genetic conservation), including the most complete guide to working with broody hens available anywhere Making and mixing your own feed (with tips on equipment, storage, basic ingredients, technique, grinding and mixing) Providing more of the flock's feed from sources grown or self-foraged on the homestead or farm, including production of live protein feeds using earthworms and soldier grubs Using poultry to increase soil fertility, control crop damaging insects, and to make compost-including systems for pasturing and for tillage of cover crops and weeds Recipes for great egg and poultry dishes (including *Ussery's* famous chicken stock!) And one of the best step-by-step poultry butchering guides available, complete with extensive illustrative photos. No other book on raising poultry takes an entirely whole-systems approach, or discusses producing homegrown feed and breeding in such detail. This is a truly invaluable guide that will lead farmers and homesteaders into a new world of self-reliance and enjoyment.

Tribology on the Small Scale Prentice Hall

Small-scale fisheries are a major source of food and employment around the world. Yet, many small-scale fishers work in conditions that are neither safe nor secure. Millions of them are poor, and often they are socially and politically marginalized. Macro-economic and institutional mechanisms are essential to address these poverty and vulnerability problems; however, interventions at the local community level are also necessary. This requires deep understanding of what poverty means to the fishers, their families and communities; how they cope with it; and the challenges they face to increase resiliency and improve their lives for the better. This book provides a global perspective, situating small-scale fisheries within the broad academic discourse on poverty, fisheries management and development. In-depth case studies from fifteen countries in Latin America, Europe, South and Southeast Asia, and sub-Saharan Africa, demonstrate the enormously complex ecological, economic, social, cultural and political contexts of this sector. Conclusions for policy-making, formulated as a joint statement by the authors, argue that fisheries development, poverty alleviation, and resource management must be integrated within a comprehensive governance approach that also looks beyond fisheries. The scientific editors, Svein Jentoft and Arne Eide, are both with the Norwegian College of Fishery Science, Faculty of Biosciences, Fisheries and Economics, University of Tromsø, Norway.
