*Prevalence and Risk Factors Associated*

*with Pediculosis ...* Prevalence Of  
Pediculosis And Associated  
Pediculosis  
capitis is a ubiquitous parasitic skin  
disease associated with intense pruritus of  
the scalp. In developing countries it  
frequently affects children and adults, but

epidemiological data at the community  
level are rare. To assess prevalence  
...Prevalence and Risk Factors Associated  
with Pediculosis ...The prevalence of  
pediculosis capitis was 65.7% [95% CI  
60.01–70.3%]. Sex of child, age of the

child, maternal education, sharing hair comb, knowledge, and attitude towards pediculosis capitis infestation and hygiene practice were significantly associated with pediculosis (a p-value  $\leq 0.05$ ). Pediculosis infestation is found to be a major public health problem which demands special attention of the community and the government at large particularly the health sector to reduce the problem. Prevalence of pediculosis capitis and associated factors ... The prevalence of pediculosis capitis was 65.7% [95% CI 60.01–70.3%]. Sex of child, age of the child, maternal education, sharing hair comb, knowledge, and attitude towards pediculosis capitis infestation and hygiene practice were significantly associated with pediculosis (a p-value  $\leq 0.05$ ). Prevalence of pediculosis capitis and associated factors ... Background and purpose: Pediculosis is a worldwide public health concern. This descriptive study was performed on primary-school-aged children to determine the prevalence of pediculosis and its risk factors in Mazandaran Province, Iran, on basis of geographic information system (GIS). Prevalence pediculosis and

associated risk factors in ... Objective: The prevalence of head lice (*Pediculus humanus capitis*) is one of the prevalent infections in all ages particularly among students and has a worldwide distribution. Survey the Prevalence of Pediculosis Capitis and its ... Objectives: The aim of the study was to determine the associated risk factors and prevalence of pediculosis capitis among school-aged children in Woreta town, northwest Ethiopia. (PDF) Prevalence of pediculosis capitis and associated ... Prevalence varied from 0.7% to 59% and was higher in girls and women. Of the 29 studies, 24 involved school children; the other studies involved refugee children, child laborers, the general population, street children, jail inmates, and children accompanying their mothers in prison. Worldwide Prevalence of Head Lice Pre-tested structured questionnaire was used to collect data on socio-demographic and associated factors of head lice infestation. The prevalence of head lice infestation was 67.3%. There was significant association between head lice infestation and school grade, family size, parents' literacy, bathing facilities, frequency of hair washing, and use of

shared articles (p < 0.05). Prevalence of head lice infestation and ... - BMC Dermatology Reliable data on how many people get head lice each year in the United States are not available; however, an estimated 6 million to 12 million infestations occur each year in the United States among children 3 to 11 years of age. CDC - Lice - Head Lice - Epidemiology & Risk Factors Results: Prevalence of pediculosis capitis was 9.1% (95% confidence interval (CI): 7.0-11.2 %) in the general population and 19.9% (CI: 15.4-24.4%) in children  $\leq 15$  years of age. Multivariate analysis showed that pediculosis capitis was significantly associated with age  $\leq 15$  years (OR: 16.85; CI: 7.42-38.24), ...
