Pharmaceutics is one of the most diverse subject areas in all of pharmaceutical science. In brief, it is concerned with the scientific and technological aspects of the design and manufacture of dosage forms or medicines. An understanding of pharmaceutics is therefore vital for all pharmacists and those pharmaceutical scientists who are involved with converting a drug or a potential drug into a medicine that can be delivered safely, effectively and conveniently to the patient. Now in its fourth edition, this best-selling textbook in pharmaceutics has been brought completely up to date to reflect the rapid advances in delivery methodologies by eye and injection, advances in drug formulations and delivery methods for special groups (such as children and the elderly), nanomedicine, and pharmacognosy. At the same time the editors have striven to maintain the accessibility of the text for students of pharmacy, preserving the balance between being a suitably pitched introductory text and a clear reflection of the state of the art. provides a logical, comprehensive account of drug design and manufacture includes the science of formulation and drug delivery designed and written for newcomers to the design of dosage forms New to this edition New editor: Kevin Taylor, Professor of Clinical Pharmaceutics, School of Pharmacy, University of London. Twenty-two new contributors. Six new chapters covering parenteral and ocular delivery; design and administration of medicines for the children and elderly; the latest in plant medicines; nanotechnology and nanomedicines, and the delivery of biopharmaceuticals. Thoroughly revised and updated throughout.

Pharmacology is the branch of biomedical science that deals with the discovery, research and characterization of chemicals that show biological effects. It is concerned with the explanation of cellular and organismal functions in relation to these chemicals. It examines the interactions that occur between a living organism and chemicals that affect both normal and abnormal biochemical functions. It also includes drug composition, synthesis and drug design, cellular communication, molecular diagnostic, therapy, chemical biology and medical applications and anti-pathogenic capabilities. There are two main branches of pharmacology - pharmacodynamics and pharmacokinetics. Pharmacodynamics studies the chemicals with biological receptors and pharmacokinetics studies absorption, distribution, metabolism and excretion of chemicals from the biological systems. This book presents researches and studies performed by experts across the globe. It will also provide interesting topics for research which interested readers can take up. Students, researchers, experts and all associated with pharmaceutical science will benefit alike from this book.

Pharmaceutical Dosage Forms

Pharmaceutical Press

Pharmacology is a branch of medicine which is associated with the study of drug action. A drug can be characterized as any man-made, natural, or endogenous molecule. These drugs can have a biochemical or physiological effect over the cell, tissue, organ, or organism. In vivo imaging or preclinical imaging refers to the visualization of living animals for research purposes, such as drug development and cancer research. Imaging modalities are used in identifying changes, either at the organ, tissue, cell, or molecular level. The imaging systems can be characterized into morphological/anatomical and molecular imaging techniques. The aim of this book is to present researches that have transformed this discipline and aided its advancement. It contains some path-

breaking studies in the field of pharmacology and in vivo imaging. The book is appropriate for students seeking detailed information in this area as well as for the experts.

Rang and Dale's Pharmacology Flashcards E-Book CRC Press

A comprehensive textbook covering the design of dosage forms and all aspects of drug delivery systems. 'Pharmaceutics' in its broadest sense is the 'art of the apothecary' or, in simple terms, pharmaceutical preparations. It remains a diverse subject in the pharmacy curriculum, encompassing design of drugs, their manufacture, and the elimination of micro-organisms from the products. This book encompasses all those areas and pays particular attention to the design of dosage forms and their manufacture.

This fully revised and updated third edition of *Pharmaceutical Inhalation Aerosol Technology* encompasses the scientific and technical foundation for the rationale, design, componentry, assembly and quality performance metrics of therapeutic inhalers in their delivery of pharmaceutical aerosols to treat symptoms or the underlying causes of disease. It focuses on the importance of pharmaceutical engineering as a foundational element of all inhaler products and their application to pulmonary drug delivery. The expanded scope considers previously unaddressed aspects of pharmaceutical inhalation aerosol technology and the patient interface by including aerosol delivery, lung deposition and clearance that are used as measures of effective dose delivery.

The Design and Manufacture of Medicines

Cambridge University Press

Why do men's testicles hang outside the body? Why does our appendix sometimes explode and kill us? And who does the Designer like better, anyway - us, or squid? These and other questions are addressed in *The Not-So-Intelligent Designer*. Dr. Abby Hafer argues that the human body has many faulty design features that would never have been the choice of an intelligent creator. She also points out other animals that got better body parts, which makes the Designer look a bit strange; discusses the history and politics of Intelligent Design and creationism; reveals animals that shouldn't exist according to Intelligent Design; and disposes of the idea of irreducible complexity. Her points are illustrated with pictures (by Alexander Winkler), wit, and erudition.

New in this edition are three chapters addressing Safety Data Sheet Preparation, Regulatory Requirements for GMOs, and Regulatory Requirements for Tobacco and Marijuana. The major administrative divisions for regulatory agencies and their main responsibilities are also detailed, as are the basic filing documents the agencies require. Coverage includes food additives, dietary supplements, cosmetics, over-the-counter drugs, personal care and

consumer products, agriculture and GMO products, industrial chemicals, air and drinking water regulations and the special cases of California's Proposition 65, requirements for safety data sheets, and oversight regulations. Both US and international requirements are clearly presented and referenced. In one volume, those who have regulatory responsibility in companies, lawyers, educators, and those selling these materials in the marketplace can learn about regulatory requirements and how to meet them.
